Foreword

This is version 5.0 of the Linux Standard Base Core Specification for S390. This specification is one of a series of volumes under the collective title *Linux Standard Base*:

- Common
- Core
- Desktop
- Languages
- Imaging

Note that the Core and Desktop volumes consist of a generic volume augmented by an architecture-specific volume.

Status of this Document

This is a released specification, version 5.0. Other documents may supersede or augment this specification.

A list of current released Linux Standard Base (LSB) specifications is available at <http://refspecs.linuxbase.org> (<http://refspecs.linuxbase.org/>).

If you wish to make comments regarding this document in a manner that is tracked by the LSB project, please submit them using our public bug database at <http://bugs.linuxbase.org>. Please enter your feedback, carefully indicating the title of the section for which you are submitting feedback, and the volume and version of the specification where you found the problem, quoting the incorrect text if appropriate. If you are suggesting a new feature, please indicate what the problem you are trying to solve is. That is more important than the solution, in fact.

If you do not have or wish to create a bug database account then you can also e-mail feedback to [<lsb-discuss@lists.linuxfoundation.org>](mailto:lsb-discuss@lists.linuxfoundation.org) (subscribe (<http://lists.linuxfoundation.org/mailman/listinfo/lsb-discuss>), archives (<http://lists.linuxfoundation.org/pipermail/lsb-discuss/>)), and arrangements will be made to transpose the comments to our public bug database.

Introduction

The LSB defines a binary interface for application programs that are compiled and packaged for LSB-conforming implementations on many different hardware architectures. A binary specification must include information specific to the computer processor architecture for which it is intended. To avoid the complexity of conditional descriptions, the specification has instead been divided into generic parts which are augmented by one of several architecture-specific parts, depending on the target processor architecture; the generic part will indicate when reference must be made to the architecture part, and vice versa.

This document should be used in conjunction with the documents it references. This document enumerates the system components it includes, but descriptions of those components may be included entirely or partly in this document, partly in other documents, or entirely in other reference documents. For example, the section that describes system service routines includes a list of the system routines supported in this interface, formal declarations of the data structures they use that are visible to applications, and a pointer to the underlying referenced specification for information about the syntax and semantics of each call. Only those routines not described in standards referenced by this document, or extensions to those standards, are described in the detail. Information referenced in this way is as much a part of this document as is the information explicitly included here.

The specification carries a version number of either the form *x.y* or *x.y.z*. This version number carries the following meaning:

1. The first number (*x*) is the major version number. Versions sharing the same major version number shall be compatible in a backwards direction; that is, a newer version shall be compatible with an older version. Any deletion of a library results in a new major version number. Interfaces marked as deprecated may be removed from the specification at a major version change.
2. The second number (*y*) is the minor version number. Libraries and individual interfaces may be added, but not removed. Interfaces may be marked as deprecated at a minor version change. Other minor changes may be permitted at the discretion of the LSB workgroup.
3. The third number (*z*), if present, is the editorial level. Only editorial changes should be included in such versions.

Since this specification is a descriptive Application Binary Interface, and not a source level API specification, it is not possible to make a guarantee of 100% backward compatibility between major releases. However, it is the intent that those parts of the binary interface that are visible in the source level API will remain backward compatible from version to version, except where a feature marked as "Deprecated" in one release may be removed from a future release. Implementors are strongly encouraged to make use of symbol versioning to permit simultaneous support of applications conforming to different releases of this specification.

LSB is a trademark of the Linux Foundation. Developers of applications or implementations interested in using the trademark should see the Linux Foundation Certification Policy for details.

I Introductory Elements

1 Scope

1.1 General

The Linux Standard Base (LSB) defines a system interface for compiled applications and a minimal environment for support of installation scripts. Its purpose is to enable a uniform industry standard environment for high-volume applications conforming to the LSB.

These specifications are composed of two basic parts: a common part describing those parts of the interface that remain constant across all implementations of the LSB, and an architecture-specific part describing the parts of the interface that vary by processor architecture. Together, the common part and the relevant architecture-specific part for a single hardware architecture provide a complete interface specification for compiled application programs on systems that share a common hardware architecture.

The LSB contains both a set of Application Program Interfaces (APIs) and Application Binary Interfaces (ABIs). APIs may appear in the source code of portable applications, while the compiled binary of that application may use the larger set of ABIs. A conforming implementation provides all of the ABIs listed here. The compilation system may replace (e.g. by macro definition) certain APIs with calls to one or more of the underlying binary interfaces, and may insert calls to binary interfaces as needed.

The LSB is primarily a binary interface definition. Not all of the source level APIs available to applications may be contained in this specification.

1.2 Module Specific Scope

This is the S390 architecture specific part of the Core module of the Linux Standard Base (LSB). This part supplements the common part of the LSB Core module with those interfaces that differ between architectures.

This part should be used in conjunction with LSB Core - Generic, the common part. Whenever a section of the common part is supplemented by architecture-specific information, the common part includes a reference to the architecture-specific part. This part may also contain additional information that is not referenced in the common part.

Interfaces described in this part of the LSB Core Specification are mandatory except where explicitly listed otherwise. Interfaces described in the LSB Core module are supplemented by other LSB modules. All other modules depend on the presence of LSB Core.

2 References

2.1 Normative References

The following specifications are incorporated by reference into this specification. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced specification (including any amendments) applies.

Note: Where copies of a referenced specification are available on the World Wide Web, a Uniform Resource Locator (URL) is given, for informative purposes only. Such URL might at any given time resolve to a more recent copy of the specification, or be out of date (not resolve). Reference copies of specifications at the revision level indicated may be found at the Linux Foundation's Reference Specifications (<http://refspecs.linuxbase.org>) site.

3 Requirements

3.1 Relevant Libraries

The libraries listed in [Table 3-1](#) shall be available on S390 Linux Standard Base systems, with the specified runtime names. These names override or supplement the names specified in the generic LSB (LSB Core - Generic) specification. The specified program interpreter, referred to as `proginterp` in this table, shall be used to load the shared libraries specified by `DT_NEEDED` entries at run time.

Table 3-1 Standard Library Names

Library	Runtime Name
libc	libc.so.6
libcrypt	libcrypt.so.1
libdl	libdl.so.2
libgcc_s	libgcc_s.so.1
libm	libm.so.6
libncurses	libncurses.so.5
libncursesw	libncursesw.so.5
libpthread	libpthread.so.0
libstdcxx	libstdc++.so.6
libutil	libutil.so.1
libz	libz.so.1
proginterp	/lib/ld-lsb-s390.so.3

These libraries will be in an implementation-defined directory which the dynamic linker shall search by default.

3.2 LSB Implementation Conformance

A conforming implementation is necessarily architecture specific, and must provide the interfaces specified by both the generic LSB Core specification (LSB Core - Generic) and the relevant architecture specific part of the LSB Core Specification.

Rationale: An implementation must provide *at least* the interfaces specified in these specifications. It may also provide additional interfaces.

A conforming implementation shall satisfy the following requirements:

- A processor architecture represents a family of related processors which may not have identical feature sets. The architecture specific parts of the LSB Core Specification that supplement this specification for a given target processor architecture describe a minimum acceptable processor. The implementation shall provide all features of this processor, whether in hardware or through emulation transparent to the application.
- The implementation shall be capable of executing compiled applications having the format and using the system interfaces described in this specification.
- The implementation shall provide libraries containing the interfaces specified by this specification, and shall provide a dynamic linking mechanism that allows these interfaces to be attached to applications at runtime. All the interfaces shall behave as specified in this specification.
- The map of virtual memory provided by the implementation shall conform to the requirements of this specification.

- The implementation's low-level behavior with respect to function call linkage, system traps, signals, and other such activities shall conform to the formats described in this specification.
- The implementation shall provide all of the mandatory interfaces in their entirety.
- The implementation may provide one or more of the optional interfaces. Each optional interface that is provided shall be provided in its entirety. The product documentation shall state which optional interfaces are provided.
- The implementation shall provide all files and utilities specified as part of this specification in the format defined here and in other documents normatively included by reference. All commands and utilities shall behave as required by this specification. The implementation shall also provide all mandatory components of an application's runtime environment that are included or referenced in this specification.
- The implementation, when provided with standard data formats and values at a named interface, shall provide the behavior defined for those values and data formats at that interface. However, a conforming implementation may consist of components which are separately packaged and/or sold. For example, a vendor of a conforming implementation might sell the hardware, operating system, and windowing system as separately packaged items.
- The implementation may provide additional interfaces with different names. It may also provide additional behavior corresponding to data values outside the standard ranges, for standard named interfaces.

3.3 LSB Application Conformance

A conforming application containing object files is necessarily architecture specific, and must conform to both the generic LSB Core specification (LSB Core - Generic) and the relevant architecture specific part of the LSB Core Specification. A conforming application which contains no object files may be architecture neutral. Architecture neutral applications shall conform only to the requirements of the generic LSB Core specification (LSB Core - Generic).

A conforming application shall satisfy the following requirements:

- Executable files shall be either object files in the format defined in the Object Format section of this specification, or script files in a scripting language where the interpreter is required by this specification.
- Object files shall participate in dynamic linking as defined in the Program Loading and Linking section of this specification.
- Object files shall employ only the instructions, traps, and other low-level facilities defined as being for use by applications in the Low-Level System Information section of this specification
- If the application requires any optional interface defined in this specification in order to be installed or to execute successfully, the requirement for that optional interface shall be stated in the application's documentation.
- The application shall not use any interface or data format that is not required to be provided by a conforming implementation, unless such an interface or data format is supplied by another application through direct invocation of that application during execution. The other application must also be a conforming application, and the use of such interface or data format, as well as its source (in other words, the other conforming application), shall be identified in the documentation of the application.
- The application shall not use any values for a named interface that are reserved for vendor extensions.

A strictly conforming application shall not require or use any interface, facility, or implementation-defined extension not defined in this specification in order to be installed or to execute successfully.

4 Terms and Definitions

For the purposes of this document, the terms given in *ISO/IEC Directives, Part 2, Annex H* and the following apply.

archLSB

Some LSB specification documents have both a generic, architecture-neutral part and an architecture-specific part. The latter describes elements whose definitions may be unique to a particular processor architecture. The term archLSB may be used in the generic part to refer to the corresponding section of the architecture-specific part.

Binary Standard, ABI

The total set of interfaces that are available to be used in the compiled binary code of a conforming application, including the run-time details such as calling conventions, binary format, C++ name mangling, etc.

Implementation-defined

Describes a value or behavior that is not defined by this document but is selected by an implementor. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence of the value or behavior. An application that relies on such a value or behavior cannot be assured to be portable across conforming implementations. The implementor shall document such a value or behavior so that it can be used correctly by an application.

Shell Script

A file that is read by an interpreter (e.g., awk). The first line of the shell script includes a reference to its interpreter binary.

Source Standard, API

The total set of interfaces that are available to be used in the source code of a conforming application. Due to translations, the Binary Standard and the Source Standard may contain some different interfaces.

Undefined

Describes the nature of a value or behavior not defined by this document which results from use of an invalid program construct or invalid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

Unspecified

Describes the nature of a value or behavior not specified by this document which results from use of a valid program construct or valid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

In addition, for the portions of this specification which build on IEEE Std 1003.1-2001, the definitions given in *IEEE Std 1003.1-2001, Base Definitions, Chapter 3* apply.

5 Documentation Conventions

Throughout this document, the following typographic conventions are used:

`function()`

the name of a function

command

the name of a command or utility

CONSTANT

a constant value

parameter

a parameter

variable

a variable

Throughout this specification, several tables of interfaces are presented. Each entry in these tables has the following format:

name

the name of the interface

(symver)

An optional symbol version identifier, if required.

[refno]

A reference number indexing the table of referenced specifications that follows this table.

For example,

forkpty(GLIBC_2.0) [SUSv4]

refers to the interface named `forkpty()` with symbol version `GLIBC_2.0` that is defined in the reference indicated by the tag `SUSv4`.

Note: For symbols with versions which differ between architectures, the symbol versions are defined in the architecture specific parts of of this module specification only. In the generic part, they will appear without symbol versions.

II Executable and Linking Format (ELF)

6 Introduction

Executable and Linking Format (ELF) defines the object format for compiled applications. This specification supplements the information found in [System V ABI Update](#) and [LINUX for S/390 ELF Application Binary Interface Supplement](#), and is intended to document additions made since the publication of that document.

7 Low Level System Information

7.1 Machine Interface

7.1.1 Processor Architecture

The ESA/390 Architecture is specified by the following documents

- [LINUX for S/390 ELF Application Binary Interface Supplement](#)
- [Enterprise Systems Architecture/390 Principles of Operation](#)

Only the features of ESA/390 processor instruction set and the following optional instructions may be assumed to be present:

- additional floating point facility
- compare and move extended facility
- immediate and relative instruction facility
- string instruction facility
- square-root facility

An application should determine if any additional instruction set features are available before using those additional features. If a feature is not present, then a conforming application shall not use it.

Conforming applications shall not invoke the implementations underlying system call interface directly. The interfaces in the implementation base libraries shall be used instead.

Rationale: Implementation-supplied base libraries may use the system call interface but applications must not assume any particular operating system or kernel version is present.

Applications conforming to this specification must provide feedback to the user if a feature that is required for correct execution of the application is not present. Applications conforming to this specification should attempt to execute in a diminished capacity if a required instruction set feature is not present.

This specification does not provide any performance guarantees of a conforming system. A system conforming to this specification may be implemented in either hardware or software.

7.1.2 Data Representation

LSB-conforming applications shall use the data representation as defined in Chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.1.2.1 Byte Ordering

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.1.2.2 Fundamental Types

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.1.2.3 Aggregates and Unions

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.1.2.4 Bit Fields

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.2 Function Calling Sequence

LSB-conforming applications shall use the function calling sequence as defined in Chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.2.1 Registers

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.2.2 Stack Frame

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.2.3 Parameter Passing

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.2.4 Variable Argument Lists

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.2.5 Return Values

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3 Operating System Interface

LSB-conforming applications shall use the Operating System Interfaces as defined in Chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3.1 Virtual Address Space

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3.1.1 Page Size

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3.1.2 Virtual Address Assignments

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3.1.3 Managing the Process Stack

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3.1.4 Coding Guidelines

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3.2 Processor Execution Mode

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.3.3 Exception Interface

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.4 Process Initialization

LSB-conforming applications shall use the Process Initialization as defined in Chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.4.1 Registers

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.4.2 Process Stack

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.5 Coding Examples

LSB-conforming applications may implement fundamental operations using the Coding Examples as defined in Chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.5.1 Code Model Overview

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.5.2 Function Prolog and Epilog

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.5.3 Data Objects

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.5.4 Function Calls

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.5.5 Branching

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.5.6 Dynamic Stack Space Allocation

See chapter 1 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

7.6 Debug Information

The LSB does not currently specify the format of Debug information.

8 Object Format

8.1 Introduction

LSB-conforming implementations shall support the Executable and Linking Format (ELF) object file format, as defined by the following documents:

- [System V ABI](#)
- [System V ABI Update](#)
- [LINUX for S/390 ELF Application Binary Interface Supplement](#)
- [LSB Core - Generic](#)
- this document

8.2 ELF Header

8.2.1 Machine Information

LSB-conforming applications shall use the Machine Information as defined in Chapter 2 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

8.3 Sections

See chapter 2 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

8.3.1 Special Sections

The following sections are defined in the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

Table 8-1 ELF Special Sections

Name	Type	Attributes
.got	SHT_PROGBITS	SHF_ALLOC+SHF_WRITE
.plt	SHT_PROGBITS	SHF_ALLOC+SHF_EXECINSTR

.got

This section holds the global offset table.

.plt

This section holds the procedure linkage table.

8.3.2 Additional Special Sections

The following additional sections are defined here.

Table 8-2 Additional Special Sections

Name	Type	Attributes
.rela.dyn	SHT_RELA	SHF_ALLOC
.rela.plt	SHT_RELA	SHF_ALLOC

.rela.dyn

This section holds RELA type relocation information for all sections of a shared library except the PLT.

.rel.plt

This section holds RELA type relocation information for the PLT section of a shared library or dynamically linked application.

8.4 Symbol Table

LSB-conforming applications shall use the Symbol Table as defined in Chapter 2 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

8.5 Relocation

LSB-conforming applications shall use Relocations as defined in Chapter 2 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

8.5.1 Relocation Types

See chapter 2 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

9 Program Loading and Dynamic Linking

9.1 Introduction

LSB-conforming implementations shall support the object file information and system actions that create running programs as specified in the [LINUX for S/390 ELF Application Binary Interface Supplement](#) and as supplemented by the the generic LSB and this document. LSB-conforming implementations need not support tags related functionality. LSB-conforming applications must not rely on tags related functionality.

9.2 Program Loading

See chapter 3 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

9.3 Dynamic Linking

See chapter 3 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

9.3.1 Dynamic Section

The following dynamic entries are defined in the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

DT_JMPREL

This entry is associated with a table of relocation entries for the procedure linkage table. This entry is mandatory both for executable and shared object files

DT_PLTGOT

This entry's `d_ptr` member gives the address of the first byte in the procedure linkage table

9.3.2 Global Offset Table

See chapter 3 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

9.3.3 Shared Object Dependencies

See chapter 3 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

9.3.4 Function Addresses

See chapter 3 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

9.3.5 Procedure Linkage Table

See chapter 3 of the [LINUX for S/390 ELF Application Binary Interface Supplement](#).

III Base Libraries

10 Libraries

An LSB-conforming implementation shall support base libraries which provide interfaces for accessing the operating system, processor and other hardware in the system.

Only interfaces and interface details which are unique to the S390 platform are defined here. This section should be used in conjunction with the corresponding section of LSB Core - Generic.

10.1 Program Interpreter/Dynamic Linker

The Program Interpreter shall be [/lib/ld-lsb-s390.so.3](#).

10.2 Interfaces for libc

[Table 10-1](#) defines the library name and shared object name for the libc library

Table 10-1 libc Definition

Library:	libc
SONAME:	libc.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LFS] [Large File Support](#)

[LSB] [LSB Core - Generic](#)

[RPC + XDR] [RFC 5531/4506 RPC & XDR](#)

[SUSv2] [SUSv2](#)

[SUSv3] [POSIX 1003.1-2001 \(ISO/IEC 9945-2003\)](#)

[SUSv4] [POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#)

[SVID.4] [SVID Issue 4](#)

10.2.1 RPC

10.2.1.1 Interfaces for RPC

An LSB conforming implementation shall provide the architecture specific functions for RPC specified in [Table 10-2](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 10-2 libc - RPC Function Interfaces

authnone_create(GLIBC_2.0) [SVID.4]	callrpc(GLIBC_2.0) [RPC + XDR]	clnt_create(GLIBC_2.0) [SVID.4]	clnt_pcreateerror(GLIBC_2.0) [SVID.4]
clnt_permpno(GLIBC_2.0) [SVID.4]	clnt_perror(GLIBC_2.0) [SVID.4]	clnt_spccreateerror(GLIBC_2.0) [SVID.4]	clnt_spermpno(GLIBC_2.0) [SVID.4]
clnt_spperror(GLIBC_2.0) [SVID.4]	clntraw_create(GLIBC_2.0) [RPC + XDR]	clnttcp_create(GLIBC_2.0) [RPC + XDR]	clntudp_bufcreate(GLIBC_2.0) [RPC + XDR]

svcf_create(GLIBC_2.0) [RPC + XDR]	svcrw_create(GLIBC_2.0) [RPC + XDR]	svtcp_create(GLIBC_2.0) [LSB]	svcdp_create(GLIBC_2.0) [LSB]
xdr_accepted_reply(GLIBC_2.0) [SVID.4]	xdr_array(GLIBC_2.0) [SVID.4]	xdr_bool(GLIBC_2.0) [SVID.4]	xdr_bytes(GLIBC_2.0) [SVID.4]
xdr_callhdr(GLIBC_2.0) [SVID.4]	xdr_callmsg(GLIBC_2.0) [SVID.4]	xdr_char(GLIBC_2.0) [SVID.4]	xdr_double(GLIBC_2.0) [SVID.4]
xdr_enum(GLIBC_2.0) [SVID.4]	xdr_float(GLIBC_2.0) [SVID.4]	xdr_free(GLIBC_2.0) [SVID.4]	xdr_int(GLIBC_2.0) [SVID.4]
xdr_long(GLIBC_2.0) [SVID.4]	xdr_opaque(GLIBC_2.0) [SVID.4]	xdr_opaque_auth(GLIBC_2.0) [SVID.4]	xdr_pointer(GLIBC_2.0) [SVID.4]
xdr_reference(GLIBC_2.0) [SVID.4]	xdr_rejected_reply(GLIBC_2.0) [SVID.4]	xdr_replymsg(GLIBC_2.0) [SVID.4]	xdr_short(GLIBC_2.0) [SVID.4]
xdr_string(GLIBC_2.0) [SVID.4]	xdr_u_char(GLIBC_2.0) [SVID.4]	xdr_u_int(GLIBC_2.0) [LSB]	xdr_u_long(GLIBC_2.0) [SVID.4]
xdr_u_short(GLIBC_2.0) [SVID.4]	xdr_union(GLIBC_2.0) [SVID.4]	xdr_vector(GLIBC_2.0) [SVID.4]	xdr_void(GLIBC_2.0) [SVID.4]
xdr_wrapstring(GLIBC_2.0) [SVID.4]	xdrmem_create(GLIBC_2.0) [SVID.4]	xdrrec_create(GLIBC_2.0) [SVID.4]	xdrrec_endofrecord(GLIBC_2.0) [RPC + XDR]
xdrrec_eof(GLIBC_2.0) [SVID.4]	xdrrec_skiprecord(GLIBC_2.0) [RPC + XDR]	xdrstdio_create(GLIBC_2.0) [LSB]	

An LSB conforming implementation shall provide the architecture specific deprecated functions for RPC specified in [Table 10-3](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 10-3 libc - RPC Deprecated Function Interfaces

key_decryptsession(GLIBC_2.1) [SVID.4]			
--	--	--	--

10.2.2 Epoll

10.2.2.1 Interfaces for Epoll

No external functions are defined for libc - Epoll in this part of the specification. See also the generic specification.

10.2.3 System Calls

10.2.3.1 Interfaces for System Calls

An LSB conforming implementation shall provide the architecture specific functions for System Calls specified in [Table 10-4](#), with the full mandatory functionality as described

in the referenced underlying specification.

Table 10-4 libc - System Calls Function Interfaces

10.3 Data Definitions for libc

This section defines global identifiers and their values that are associated with interfaces contained in libc. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

10.4 Interfaces for libm

[Table 10-37](#) defines the library name and shared object name for the libm library

Table 10-37 libm Definition

Library:	libm
SONAME:	libm.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [LSB Core - Generic](#)

[SUSv3] [POSIX 1003.1-2001 \(ISO/IEC 9945-2003\)](#)

[SUSv4] [POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#)

10.4.1 Math

10.4.1.1 Interfaces for Math

An LSB conforming implementation shall provide the architecture specific functions for Math specified in [Table 10-38](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 10-38 libm - Math Function Interfaces

Table 10-40 libm - Math Data Interfaces

signgam(GLIBC_2.0) [SUSv4]			
----------------------------	--	--	--

10.5 Data Definitions for libm

This section defines global identifiers and their values that are associated with interfaces contained in libm. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

10.5.1 complex.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

10.5.2 fenv.h

```
#define FE_INEXACT      0x08
#define FE_UNDERFLOW   0x10
#define FE_OVERFLOW     0x20

```

10.6 Interface Definitions for libm

The interfaces defined on the following pages are included in libm and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 10.4](#) shall behave as described in the referenced base document. For interfaces referencing LSB and not listed below, please see the generic part of the specification.

__fpclassify

Name

__fpclassify — Classify real floating type

Synopsis

```
int __fpclassify(long double arg);
```

Description

__fpclassify() has the same specification as fpclassify() in [POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#), except that the argument type for __fpclassify() is known to be long double.

__fpclassify() is not in the source standard; it is only in the binary standard.

__signbitl

Name

__signbitl — test sign of floating point value

Synopsis

```
#include <math.h>
int __signbitl(long double arg);
```

Description

__signbitl() has the same specification as signbit() in [POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#), except that the argument type for __signbitl() is known to be long double.

__signbitl() is not in the source standard; it is only in the binary standard.

10.7 Interfaces for libpthread

[Table 10-41](#) defines the library name and shared object name for the libpthread library

Table 10-41 libpthread Definition

Library:	libpthread
SONAME:	libpthread.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[LFS] [Large File Support](#)

[LSB] [LSB Core - Generic](#)

[SUSv3] [POSIX 1003.1-2001 \(ISO/IEC 9945-2003\)](#)

[SUSv4] [POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#)

10.7.1 Realtime Threads

10.7.1.1 Interfaces for Realtime Threads

An LSB conforming implementation shall provide the architecture specific functions for Realtime Threads specified in [Table 10-42](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 10-42 libpthread - Realtime Threads Function Interfaces

pthread_attr_getinheritched(GLIBC_2.0) [SUSv4]	pthread_attr_getschedpolicy(GLIBC_2.0) [SUSv4]	pthread_attr_getschedpolicy(GLIBC_2.0) [SUSv4]	pthread_attr_setinheritched(GLIBC_2.0) [SUSv4]

10.8 Data Definitions for libpthread

This section defines global identifiers and their values that are associated with interfaces contained in libpthread. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

10.8.1 lsb/pthread.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

10.8.2 pthread.h

```
#define __SIZEOF_PTHREAD_BARRIER_T 20
#define __SIZEOF_PTHREAD_MUTEX_T 24
#define __SIZEOF_PTHREAD_RWLOCK_T 32
#define __SIZEOF_PTHREAD_ATTR_T 36
#define PTHREAD_RWLOCK_INITIALIZER { { 0, 0, 0, 0, 0, 0, 0, 0, 0 } }
#define PTHREAD_MUTEX_INITIALIZER { { 0, 0, 0, 0, 0, { 0 } } }

typedef union {
    char __size[__SIZEOF_PTHREAD_BARRIER_T];
    long int __align;
} pthread_barrier_t;

struct __pthread_mutex_s {
    int __lock;
    unsigned int __count;
    int __owner;
    int __kind;
    unsigned int __users;
    __extension__ union {
        int __spins;
        __pthread_slist_t __list;
    };
};

typedef struct __pthread_internal_slist __pthread_slist_t;
```

```
typedef union {

        unsigned int __writer_wakeup;
        unsigned int __nr_readers_queued;
        unsigned int __nr_writers_queued;
        unsigned int __flags;
        int __writer;
    } __data;
    char __size[__SIZEOF_PTHREAD_RWLOCK_T];
    long int __align;
} pthread_rwlock_t;
```

10.8.3 semaphore.h

```
#define __SIZEOF_SEM_T 16
```

10.9 Interfaces for libgcc_s

[Table 10-54](#) defines the library name and shared object name for the libgcc_s library

Table 10-54 libgcc_s Definition

Library:	libgcc_s
SONAME:	libgcc_s.so.1

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [LSB Core - Generic](#)

10.9.1 Unwind Library

10.9.1.1 Interfaces for Unwind Library

An LSB conforming implementation shall provide the architecture specific functions for Unwind Library specified in [Table 10-55](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 10-55 libgcc_s - Unwind Library Function Interfaces

<code>_Unwind_Backtrace(GCC_3.3)</code> [LSB]	<code>_Unwind_DeleteException(GCC_3.0)</code> [LSB]	<code>_Unwind_FindEnclosingFunction(GCC_3.3)</code> [LSB]	<code>_Unwind_FindFrame(GCC_3.0)</code> [LSB]
<code>_Unwind_ForceUnwind(GCC_3.0)</code> [LSB]	<code>_Unwind_GetCFA(GCC_3.3)</code> [LSB]	<code>_Unwind_GetDataRelBase(GCC_3.0)</code> [LSB]	<code>_Unwind_GetGR(GCC_3.0)</code> [LSB]
<code>_Unwind_GetIP(GCC_3.0)</code> [LSB]	<code>_Unwind_GetLanguageSpecificData(GCC_3.0)</code> [LSB]	<code>_Unwind_GetRegionStart(GCC_3.0)</code> [LSB]	<code>_Unwind_GetTextRelBase(GCC_3.0)</code> [LSB]
<code>_Unwind_RaiseException(GCC_3.0)</code> [LSB]	<code>_Unwind_Resume(GCC_3.0)</code> [LSB]	<code>_Unwind_ResumeOrRethrow(GCC_3.3)</code> [LSB]	<code>_Unwind_SetGR(GCC_3.0)</code> [LSB]
<code>_Unwind_SetIP(GCC_3.0)</code> [LSB]			

10.10 Data Definitions for libgcc_s

This section defines global identifiers and their values that are associated with interfaces contained in libgcc_s. These definitions are organized into groups that correspond to

system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

10.10.1 unwind.h

```
extern _Unwind_Ptr _Unwind_GetDataRelBase(struct _Unwind_Context
*);
extern _Unwind_Ptr _Unwind_GetTextRelBase(struct _Unwind_Context
*);
```

10.11 Interface Definitions for libgcc_s

The interfaces defined on the following pages are included in libgcc_s and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 10.9](#) shall behave as described in the referenced base document. For interfaces referencing LSB and not listed below, please see the generic part of the specification.

`_Unwind_Find_FDE`

Name

`_Unwind_Find_FDE` — private C++ error handling method

Synopsis

```
fde * _Unwind_Find_FDE(void * pc, struct dwarf_eh_bases * bases);
```

Description

`_Unwind_Find_FDE()` looks for the object containing *pc*, then inserts into *bases*.

`_Unwind_GetDataRelBase`

Name

`_Unwind_GetDataRelBase` — private IA64 C++ error handling method

Synopsis

```
_Unwind_Ptr _Unwind_GetDataRelBase(struct _Unwind_Context * context);
```

Description

`_Unwind_GetDataRelBase()` returns the global pointer in register one for *context*.

_Unwind_GetTextRelBase

Name

`_Unwind_GetTextRelBase` — private IA64 C++ error handling method

Synopsis

```
_Unwind_Ptr _Unwind_GetTextRelBase(struct _Unwind_Context * context);
```

Description

`_Unwind_GetTextRelBase()` calls the abort method, then returns.

10.12 Interfaces for libdl

[Table 10-56](#) defines the library name and shared object name for the libdl library

Table 10-56 libdl Definition

Library:	libdl
SONAME:	libdl.so.2

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [LSB Core - Generic](#)

[SUSv4] [POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#)

10.12.1 Dynamic Loader

10.12.1.1 Interfaces for Dynamic Loader

An LSB conforming implementation shall provide the architecture specific functions for Dynamic Loader specified in [Table 10-57](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 10-57 libdl - Dynamic Loader Function Interfaces

<code>dldaddr(GLIBC_2.0)</code> [LSB]	<code>dldclose(GLIBC_2.0)</code> [SUSv4]	<code>dlderror(GLIBC_2.0)</code> [SUSv4]	<code>dldopen(GLIBC_2.1)</code> [LSB]
<code>dldsym(GLIBC_2.0)</code> [LSB]	<code>dldvsym(GLIBC_2.1)</code> [LSB]		

10.13 Data Definitions for libdl

This section defines global identifiers and their values that are associated with interfaces contained in libdl. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

10.13.1 dlfcn.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

10.14 Interfaces for libcrypt

[Table 10-58](#) defines the library name and shared object name for the libcrypt library

Table 10-58 libcrypt Definition

Library:	libcrypt
SONAME:	libcrypt.so.1

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [LSB Core - Generic](#)

[SUSv4] [POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#)

10.14.1 Encryption

10.14.1.1 Interfaces for Encryption

An LSB conforming implementation shall provide the architecture specific functions for Encryption specified in [Table 10-59](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 10-59 libcrypt - Encryption Function Interfaces

crypt(GLIBC_2.0) [SUSv4]	crypt_r(GLIBC_2.0) [LSB]	encrypt(GLIBC_2.0) [SUSv4]	encrypt_r(GLIBC_2.0) [LSB]
setkey(GLIBC_2.0) [SUSv4]	setkey_r(GLIBC_2.0) [LSB]		

10.15 Data Definitions for libcrypt

This section defines global identifiers and their values that are associated with interfaces contained in libcrypt. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

10.15.1 crypt.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

IV Utility Libraries

11 Libraries

An LSB-conforming implementation shall also support the following utility libraries which are built on top of the interfaces provided by the base libraries. These libraries implement common functionality, and hide additional system dependent information such as file formats and device names.

11.1 Interfaces for libz

[Table 11-1](#) defines the library name and shared object name for the libz library

Table 11-1 libz Definition

Library:	libz
SONAME:	libz.so.1

11.1.1 Compression Library

11.1.1.1 Interfaces for Compression Library

No external functions are defined for libz - Compression Library in this part of the specification. See also the generic specification.

11.2 Data Definitions for libz

This section defines global identifiers and their values that are associated with interfaces contained in libz. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

11.2.1 zconf.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

11.2.2 zlib.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

11.3 Interfaces for libncurses

[Table 11-2](#) defines the library name and shared object name for the libncurses library

Table 11-2 libncurses Definition

Library:	libncurses
SONAME:	libncurses.so.5

11.3.1 Curses

11.3.1.1 Interfaces for Curses

No external functions are defined for libncurses - Curses in this part of the specification. See also the generic specification.

11.4 Data Definitions for libncurses

This section defines global identifiers and their values that are associated with interfaces contained in libncurses. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

11.4.1 curses.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

11.5 Interfaces for libncursesw

[Table 11-3](#) defines the library name and shared object name for the libncursesw library

Table 11-3 libncursesw Definition

Library:	libncursesw
SONAME:	libncursesw.so.5

11.5.1 Curses Wide

11.5.1.1 Interfaces for Curses Wide

No external functions are defined for libncursesw - Curses Wide in this part of the specification. See also the generic specification.

11.6 Data Definitions for libncursesw

This section defines global identifiers and their values that are associated with interfaces contained in libncursesw. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header

file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

11.6.1 ncursesw/curses.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

11.6.2 ncursesw/ncurses_dll.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

11.6.3 ncursesw/term.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

11.6.4 ncursesw/unctrl.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

11.7 Interfaces for libutil

[Table 11-4](#) defines the library name and shared object name for the libutil library

Table 11-4 libutil Definition

Library:	libutil
SONAME:	libutil.so.1

The behavior of the interfaces in this library is specified by the following specifications:
[LSB] [LSB Core - Generic](#)

11.7.1 Utility Functions

11.7.1.1 Interfaces for Utility Functions

An LSB conforming implementation shall provide the architecture specific functions for Utility Functions specified in [Table 11-5](#), with the full mandatory functionality as de-

scribed in the referenced underlying specification.

Table 11-5 libutil - Utility Functions Function Interfaces

forkpty(GLIBC_2.0) [LSB]	login(GLIBC_2.0) [LSB]	login_tty(GLIBC_2.0) [LSB]	logout(GLIBC_2.0) [LSB]
logwtmp(GLIBC_2.0) [LSB]	openpty(GLIBC_2.0) [LSB]		

V Base Libraries

12 Libraries

An LSB-conforming implementation shall support base libraries which provide interfaces for accessing the operating system, processor and other hardware in the system.

Only those interfaces that are unique to the PowerPC 32 platform are defined here. This section should be used in conjunction with the corresponding section in the Linux Standard Base Specification.

12.1 Interfaces for libstdc++

[Table 12-1](#) defines the library name and shared object name for the libstdc++ library

Table 12-1 libstdc++ Definition

Library:	libstdc++
SONAME:	libstdc++.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] [Itanium™ C++ ABI](#)

[ISOCXX] [ISO/IEC 14882: 2003 C++ Language](#)

[LSB] [LSB Core - Generic](#)

12.1.1 C++ Runtime Support

12.1.1.1 Interfaces for C++ Runtime Support

An LSB conforming implementation shall provide the architecture specific methods for C++ Runtime Support specified in [Table 12-2](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-2 libstdc++ - C++ Runtime Support Function Interfaces

<code>operator new[](unsigned long)(GLIBCXX_3.4)</code> [ISOCXX]
<code>operator new[](unsigned long, nothrow_t const&)(GLIBCXX_3.4)</code> [ISOCXX]
<code>operator new(unsigned long)(GLIBCXX_3.4)</code> [ISOCXX]
<code>operator new(unsigned long, nothrow_t const&)(GLIBCXX_3.4)</code> [ISOCXX]

12.1.2 C++ type descriptors for built-in types

12.1.2.1 Interfaces for C++ type descriptors for built-in types

No external methods are defined for libstdc++ - C++ type descriptors for built-in types in this part of the specification. See also the generic specification.

12.1.3 C++ `_Rb_tree`

12.1.3.1 Interfaces for C++ `_Rb_tree`

No external methods are defined for libstdc++ - C++ `_Rb_tree` in this part of the specification. See also the generic specification.

12.1.4 Class `type_info`

12.1.4.1 Class data for `type_info`

The virtual table for the `std::type_info` class is described in the generic part of this specification.

The Run Time Type Information for the `std::type_info` class is described by [Table 12-3](#)

Table 12-3 typeinfo for type_info

Base Vtable	vtable for __cxxabiv1::__class_type_info
Name	typeinfo name for type_info

12.1.4.2 Interfaces for Class type_info

No external methods are defined for libstdc++ - Class std::type_info in this part of the specification. See also the generic specification.

12.1.5 Class __cxxabiv1::__enum_type_info**12.1.5.1 Class data for __cxxabiv1::__enum_type_info**

The virtual table for the __cxxabiv1::__enum_type_info class is described in the generic part of this specification.

The Run Time Type Information for the __cxxabiv1::__enum_type_info class is described by [Table 12-4](#)

Table 12-4 typeinfo for __cxxabiv1::__enum_type_info

Base Vtable	vtable for __cxxabiv1::__si_class_type_info
Name	typeinfo name for __cxxabiv1::__enum_type_info

12.1.5.2 Interfaces for Class __cxxabiv1::__enum_type_info

No external methods are defined for libstdc++ - Class __cxxabiv1::__enum_type_info in this part of the specification. See also the generic specification.

12.1.6 Class __cxxabiv1::__array_type_info**12.1.6.1 Class data for __cxxabiv1::__array_type_info**

The virtual table for the __cxxabiv1::__array_type_info class is described in the generic part of this specification.

The Run Time Type Information for the __cxxabiv1::__array_type_info class is described by [Table 12-5](#)

Table 12-5 typeinfo for __cxxabiv1::__array_type_info

Base Vtable	vtable for __cxxabiv1::__si_class_type_info
Name	typeinfo name for __cxxabiv1::__array_type_info

12.1.6.2 Interfaces for Class __cxxabiv1::__array_type_info

No external methods are defined for libstdc++ - Class __cxxabiv1::__array_type_info in this part of the specification. See also the generic specification.

12.1.7 Class __cxxabiv1::__class_type_info**12.1.7.1 Class data for __cxxabiv1::__class_type_info**

12.1.13 Class `__cxxabiv1::__fundamental_type_info`

12.1.13.1 Class data for `__cxxabiv1::__fundamental_type_info`

The virtual table for the `__cxxabiv1::__fundamental_type_info` class is described in the generic part of this specification.

The Run Time Type Information for the `__cxxabiv1::__fundamental_type_info` class is described by [Table 12-18](#)

Table 12-18 typeinfo for `__cxxabiv1::__fundamental_type_info`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>__cxxabiv1::__fundamental_type_info</code>

12.1.13.2 Interfaces for Class `__cxxabiv1::__fundamental_type_info`

No external methods are defined for libstdcxx - Class `__cxxabiv1::__fundamental_type_info` in this part of the specification. See also the generic specification.

12.1.14 Class

`__cxxabiv1::__pointer_to_member_type_info`

12.1.14.1 Class data for

`__cxxabiv1::__pointer_to_member_type_info`

The virtual table for the `__cxxabiv1::__pointer_to_member_type_info` class is described in the generic part of this specification.

The Run Time Type Information for the `__cxxabiv1::__pointer_to_member_type_info` class is described by [Table 12-19](#)

Table 12-19 typeinfo for `__cxxabiv1::__pointer_to_member_type_info`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>__cxxabiv1::__pointer_to_member_type_info</code>

12.1.14.2 Interfaces for Class

`__cxxabiv1::__pointer_to_member_type_info`

No external methods are defined for libstdc++ - Class `__cxxabiv1::__pointer_to_member_type_info` in this part of the specification. See also the generic specification.

12.1.15 Class `__gnu_cxx::stdio_filebuf<char, char_traits<char> >`

12.1.15.1 Interfaces for Class `__gnu_cxx::stdio_filebuf<char, char_traits<char> >`

No external methods are defined for libstdc++ - Class `__gnu_cxx::stdio_filebuf<char, std::char_traits<char> >` in this part of the specification. See also the generic specification.

12.1.16 Class `__gnu_cxx::stdio_filebuf<wchar_t, char_traits<wchar_t> >`

12.1.16.1 Interfaces for Class `__gnu_cxx::stdio_filebuf<wchar_t, char_traits<wchar_t> >`

No external methods are defined for libstdc++ - Class `__gnu_cxx::stdio_filebuf<wchar_t, std::char_traits<wchar_t> >` in this part of the specification. See also the generic specification.

12.1.17 Class `__gnu_cxx::__pool_alloc_base`

12.1.17.1 Interfaces for Class `__gnu_cxx::__pool_alloc_base`

An LSB conforming implementation shall provide the architecture specific methods for Class `__gnu_cxx::__pool_alloc_base` specified in [Table 12-20](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-20 libstdc++ - Class `__gnu_cxx::__pool_alloc_base` Function Interfaces

<code>__gnu_cxx::__pool_alloc_base::M_get_free_list(unsigned long)(GLIBCXX_3.4.2)</code> [LSB]
<code>__gnu_cxx::__pool_alloc_base::M_refill(unsigned long)(GLIBCXX_3.4.2)</code> [LSB]

12.1.18 Class `__gnu_cxx::stdio_sync_filebuf<char, char_traits<char> >`

12.1.18.1 Class data for `__gnu_cxx::stdio_sync_filebuf<char, char_traits<char> >`

The virtual table for the `__gnu_cxx::stdio_sync_filebuf<char, std::char_traits<char> >` class is described by [Table 12-21](#)

Table 12-21 Primary vtable for `__gnu_cxx::stdio_sync_filebuf<char, char_traits<char> >`

vfunc[9]:	<code>__gnu_cxx::stdio_sync_filebuf<wchar_t, char_traits<wchar_t>>::underflow()</code>
vfunc[10]:	<code>__gnu_cxx::stdio_sync_filebuf<wchar_t,</code>

	char_traits<wchar_t> >::uflow()
vfunc[11]:	__gnu_cxx::stdio_sync_filebuf<wchar_t, char_traits<wchar_t> >::pbackfail(unsigned int)
vfunc[12]:	__gnu_cxx::stdio_sync_filebuf<wchar_t, char_traits<wchar_t> >::xsputn(wchar_t const*, int)
vfunc[13]:	__gnu_cxx::stdio_sync_filebuf<wchar_t, char_traits<wchar_t> >::overflow(unsigned int)

12.1.19.2 Interfaces for Class

__gnu_cxx::stdio_sync_filebuf<wchar_t, char_traits<wchar_t> >

No external methods are defined for libstdc++ - Class __gnu_cxx::stdio_sync_filebuf<wchar_t, std::char_traits<wchar_t> > in this part of the specification. See also the generic specification.

12.1.20 Class exception

12.1.20.1 Class data for exception

The virtual table for the std::exception class is described in the generic part of this specification.

The Run Time Type Information for the std::exception class is described by [Table 12-23](#)

Table 12-23 typeinfo for exception

Base Vtable	vtable for __cxxabiv1::__class_type_info
Name	typeid name for exception

12.1.20.2 Interfaces for Class exception

No external methods are defined for libstdc++ - Class std::exception in this part of the specification. See also the generic specification.

12.1.21 Class bad_typeid

12.1.21.1 Class data for bad_typeid

The virtual table for the std::bad_typeid class is described in the generic part of this specification.

The Run Time Type Information for the std::bad_typeid class is described by [Table 12-24](#)

Table 12-24 typeinfo for bad_typeid

Base Vtable	vtable for __cxxabiv1::__si_class_type_info
Name	typeid name for bad_typeid

12.1.21.2 Interfaces for Class bad_typeid

No external methods are defined for libstdc++ - Class std::bad_typeid in this part of the specification. See also the generic specification.

12.1.22 Class logic_error

12.1.22.1 Class data for logic_error

The virtual table for the `std::logic_error` class is described in the generic part of this specification.

The Run Time Type Information for the `std::logic_error` class is described by [Table 12-25](#)

Table 12-25 typeinfo for logic_error

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>logic_error</code>

12.1.22.2 Interfaces for Class logic_error

No external methods are defined for `libstdcxx` - Class `std::logic_error` in this part of the specification. See also the generic specification.

12.1.23 Class range_error

12.1.23.1 Class data for range_error

The virtual table for the `std::range_error` class is described in the generic part of this specification.

The Run Time Type Information for the `std::range_error` class is described by [Table 12-26](#)

Table 12-26 typeinfo for range_error

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>range_error</code>

12.1.23.2 Interfaces for Class range_error

No external methods are defined for `libstdcxx` - Class `std::range_error` in this part of the specification. See also the generic specification.

12.1.24 Class domain_error

12.1.24.1 Class data for domain_error

The virtual table for the `std::domain_error` class is described in the generic part of this specification.

The Run Time Type Information for the `std::domain_error` class is described by [Table 12-27](#)

Table 12-27 typeinfo for domain_error

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>domain_error</code>

12.1.24.2 Interfaces for Class domain_error

No external methods are defined for `libstdcxx` - Class `std::domain_error` in this part of the specification. See also the generic specification.

12.1.25 Class length_error

12.1.25.1 Class data for length_error

The virtual table for the `std::length_error` class is described in the generic part of this specification.

The Run Time Type Information for the `std::length_error` class is described by [Table 12-28](#)

Table 12-28 typeinfo for length_error

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>length_error</code>

12.1.25.2 Interfaces for Class length_error

No external methods are defined for `libstdc++` - Class `std::length_error` in this part of the specification. See also the generic specification.

12.1.26 Class out_of_range

12.1.26.1 Class data for out_of_range

The virtual table for the `std::out_of_range` class is described in the generic part of this specification.

The Run Time Type Information for the `std::out_of_range` class is described by [Table 12-29](#)

Table 12-29 typeinfo for out_of_range

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>out_of_range</code>

12.1.26.2 Interfaces for Class out_of_range

No external methods are defined for `libstdc++` - Class `std::out_of_range` in this part of the specification. See also the generic specification.

12.1.27 Class bad_exception

12.1.27.1 Class data for bad_exception

The virtual table for the `std::bad_exception` class is described in the generic part of this specification.

The Run Time Type Information for the `std::bad_exception` class is described by [Table 12-30](#)

Table 12-30 typeinfo for bad_exception

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>bad_exception</code>

12.1.27.2 Interfaces for Class bad_exception

No external methods are defined for `libstdc++` - Class `std::bad_exception` in this part of the specification. See also the generic specification.

12.1.28 Class runtime_error

12.1.28.1 Class data for runtime_error

The virtual table for the `std::runtime_error` class is described in the generic part of this specification.

The Run Time Type Information for the `std::runtime_error` class is described by [Table 12-31](#)

Table 12-31 typeid for runtime_error

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeid name for runtime_error

12.1.28.2 Interfaces for Class runtime_error

No external methods are defined for `libstdc++` - Class `std::runtime_error` in this part of the specification. See also the generic specification.

12.1.29 Class overflow_error

12.1.29.1 Class data for overflow_error

The virtual table for the `std::overflow_error` class is described in the generic part of this specification.

The Run Time Type Information for the `std::overflow_error` class is described by [Table 12-32](#)

Table 12-32 typeid for overflow_error

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeid name for overflow_error

12.1.29.2 Interfaces for Class overflow_error

No external methods are defined for `libstdc++` - Class `std::overflow_error` in this part of the specification. See also the generic specification.

12.1.30 Class underflow_error

12.1.30.1 Class data for underflow_error

The virtual table for the `std::underflow_error` class is described in the generic part of this specification.

The Run Time Type Information for the `std::underflow_error` class is described by [Table 12-33](#)

Table 12-33 typeid for underflow_error

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeid name for underflow_error

12.1.30.2 Interfaces for Class underflow_error

No external methods are defined for `libstdc++` - Class `std::underflow_error` in this part of the specification. See also the generic specification.

12.1.31 Class `invalid_argument`

12.1.31.1 Class data for `invalid_argument`

The virtual table for the `std::invalid_argument` class is described in the generic part of this specification.

The Run Time Type Information for the `std::invalid_argument` class is described by [Table 12-34](#)

Table 12-34 typeinfo for `invalid_argument`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>invalid_argument</code>

12.1.31.2 Interfaces for Class `invalid_argument`

No external methods are defined for `libstdc++` - Class `std::invalid_argument` in this part of the specification. See also the generic specification.

12.1.32 Class `bad_cast`

12.1.32.1 Class data for `bad_cast`

The virtual table for the `std::bad_cast` class is described in the generic part of this specification.

The Run Time Type Information for the `std::bad_cast` class is described by [Table 12-35](#)

Table 12-35 typeinfo for `bad_cast`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>bad_cast</code>

12.1.32.2 Interfaces for Class `bad_cast`

No external methods are defined for `libstdc++` - Class `std::bad_cast` in this part of the specification. See also the generic specification.

12.1.33 Class `bad_alloc`

12.1.33.1 Class data for `bad_alloc`

The virtual table for the `std::bad_alloc` class is described in the generic part of this specification.

The Run Time Type Information for the `std::bad_alloc` class is described by [Table 12-36](#)

Table 12-36 typeinfo for `bad_alloc`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>bad_alloc</code>

12.1.33.2 Interfaces for Class `bad_alloc`

No external methods are defined for `libstdc++` - Class `std::bad_alloc` in this part of the specification. See also the generic specification.

12.1.34 struct __numeric_limits_base

12.1.34.1 Interfaces for struct __numeric_limits_base

No external methods are defined for libstdcxx - struct __numeric_limits_base in this part of the specification. See also the generic specification.

12.1.35 struct numeric_limits<long double>

12.1.35.1 Interfaces for struct numeric_limits<long double>

No external methods are defined for libstdcxx - struct numeric_limits<long double> in this part of the specification. See also the generic specification.

12.1.36 struct numeric_limits<long long>

12.1.36.1 Interfaces for struct numeric_limits<long long>

No external methods are defined for libstdcxx - struct numeric_limits<long long> in this part of the specification. See also the generic specification.

12.1.37 struct numeric_limits<unsigned long long>

12.1.37.1 Interfaces for struct numeric_limits<unsigned long long>

No external methods are defined for libstdcxx - struct numeric_limits<unsigned long long> in this part of the specification. See also the generic specification.

12.1.38 struct numeric_limits<float>

12.1.38.1 Interfaces for struct numeric_limits<float>

No external methods are defined for libstdcxx - struct numeric_limits<float> in this part of the specification. See also the generic specification.

12.1.39 struct numeric_limits<double>

12.1.39.1 Interfaces for struct numeric_limits<double>

No external methods are defined for libstdcxx - struct numeric_limits<double> in this part of the specification. See also the generic specification.

12.1.40 struct numeric_limits<short>

12.1.40.1 Interfaces for struct numeric_limits<short>

No external methods are defined for libstdcxx - struct numeric_limits<short> in this part of the specification. See also the generic specification.

12.1.41 struct numeric_limits<unsigned short>

12.1.41.1 Interfaces for struct numeric_limits<unsigned short>

No external methods are defined for libstdcxx - struct numeric_limits<unsigned short> in this part of the specification. See also the generic specification.

12.1.42 struct numeric_limits<int>

12.1.42.1 Interfaces for struct numeric_limits<int>

No external methods are defined for libstdcxx - struct numeric_limits<int> in this part

of the specification. See also the generic specification.

12.1.43 struct numeric_limits<unsigned int>

12.1.43.1 Interfaces for struct numeric_limits<unsigned int>

No external methods are defined for libstdc++ - struct numeric_limits<unsigned int> in this part of the specification. See also the generic specification.

12.1.44 struct numeric_limits<long>

12.1.44.1 Interfaces for struct numeric_limits<long>

No external methods are defined for libstdc++ - struct numeric_limits<long> in this part of the specification. See also the generic specification.

12.1.45 struct numeric_limits<unsigned long>

12.1.45.1 Interfaces for struct numeric_limits<unsigned long>

No external methods are defined for libstdc++ - struct numeric_limits<unsigned long> in this part of the specification. See also the generic specification.

12.1.46 struct numeric_limits<wchar_t>

12.1.46.1 Interfaces for struct numeric_limits<wchar_t>

No external methods are defined for libstdc++ - struct numeric_limits<wchar_t> in this part of the specification. See also the generic specification.

12.1.47 struct numeric_limits<unsigned char>

12.1.47.1 Interfaces for struct numeric_limits<unsigned char>

No external methods are defined for libstdc++ - struct numeric_limits<unsigned char> in this part of the specification. See also the generic specification.

12.1.48 struct numeric_limits<signed char>

12.1.48.1 Interfaces for struct numeric_limits<signed char>

No external methods are defined for libstdc++ - struct numeric_limits<signed char> in this part of the specification. See also the generic specification.

12.1.49 struct numeric_limits<char>

12.1.49.1 Interfaces for struct numeric_limits<char>

No external methods are defined for libstdc++ - struct numeric_limits<char> in this part of the specification. See also the generic specification.

12.1.50 struct numeric_limits<bool>

12.1.50.1 Interfaces for struct numeric_limits<bool>

No external methods are defined for libstdc++ - struct numeric_limits<bool> in this part of the specification. See also the generic specification.

12.1.51 struct numeric_limits<__float128>

12.1.51.1 Interfaces for struct numeric_limits<__float128>

No external methods are defined for libstdcxx - struct numeric_limits<__float128> in this part of the specification. See also the generic specification.

An LSB conforming implementation shall provide the architecture specific data interfaces for struct numeric_limits<__float128> specified in [Table 12-37](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-37 libstdcxx - struct numeric_limits<__float128> Data Interfaces

numeric_limits<__float128>::has_denorm(GLIBCXX_LDBL_3.4) [ISOCXX]
numeric_limits<__float128>::is_bounded(GLIBCXX_LDBL_3.4) [ISOCXX]

numeric_limits<__float128>::is_signed(GLIBCXX_LDBL_3.4) [ISOCXX]
typeinfo for __float128 const*(CXXABI_LDBL_1.3) [CXXABI-1.86]
typeinfo for __float128*(CXXABI_LDBL_1.3) [CXXABI-1.86]
typeinfo for __float128(CXXABI_LDBL_1.3) [CXXABI-1.86]
typeinfo name for __float128 const*(CXXABI_LDBL_1.3) [CXXABI-1.86]
typeinfo name for __float128*(CXXABI_LDBL_1.3) [CXXABI-1.86]
typeinfo name for __float128(CXXABI_LDBL_1.3) [CXXABI-1.86]

12.1.52 Class ctype_base

12.1.52.1 Class data for ctype_base

The Run Time Type Information for the std::ctype_base class is described by [Table 12-38](#)

Table 12-38 typeinfo for ctype_base

Base Vtable	vtable for __cxxabiv1::__class_type_info
Name	typeinfo name for ctype_base

12.1.52.2 Interfaces for Class ctype_base

No external methods are defined for libstdcxx - Class std::ctype_base in this part of the specification. See also the generic specification.

12.1.53 Class __ctype_abstract_base<char>**12.1.53.1 Class data for __ctype_abstract_base<char>**

The virtual table for the std::__ctype_abstract_base<char> class is described in the generic part of this specification.

12.1.53.2 Interfaces for Class __ctype_abstract_base<char>

No external methods are defined for libstdcxx - Class std::__ctype_abstract_base<char> in this part of the specification. See also the generic specification.

12.1.54 Class __ctype_abstract_base<wchar_t>**12.1.54.1 Class data for __ctype_abstract_base<wchar_t>**

The virtual table for the std::__ctype_abstract_base<wchar_t> class is described in the generic part of this specification.

12.1.54.2 Interfaces for Class __ctype_abstract_base<wchar_t>

No external methods are defined for libstdcxx - Class std::__ctype_abstract_base<wchar_t> in this part of the specification. See also the generic specification.

12.1.55 Class ctype<char>**12.1.55.1 Class data for ctype<char>**

The virtual table for the std::ctype<char> class is described in the generic part of this specification.

12.1.55.2 Interfaces for Class ctype<char>

An LSB conforming implementation shall provide the architecture specific methods for Class std::ctype<char> specified in [Table 12-39](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-39 libstdcxx - Class ctype<char> Function Interfaces

ctype<char>::ctype(__locale_struct*, unsigned short const*, bool, unsigned long) (GLIBCXX_3.4) [ISO CXX]
ctype<char>::ctype(unsigned short const*, bool, unsigned long)(GLIBCXX_3.4) [ISO CXX]
ctype<char>::ctype(__locale_struct*, unsigned short const*, bool, unsigned long) (GLIBCXX_3.4) [ISO CXX]
ctype<char>::ctype(unsigned short const*, bool, unsigned long)(GLIBCXX_3.4) [ISO CXX]

12.1.56 Class `ctype<wchar_t>`

12.1.56.1 Class data for `ctype<wchar_t>`

The virtual table for the `std::ctype<wchar_t>` class is described in the generic part of this specification.

The Run Time Type Information for the `std::ctype<wchar_t>` class is described by [Table 12-40](#)

Table 12-40 `typeinfo` for `ctype<wchar_t>`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	<code>typeinfo</code> name for <code>ctype<wchar_t></code>

12.1.56.2 Interfaces for Class `ctype<wchar_t>`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::ctype<wchar_t>` specified in [Table 12-41](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-41 `libstdcxx` - Class `ctype<wchar_t>` Function Interfaces

<code>ctype<wchar_t>::ctype(__locale_struct*, unsigned long)(GLIBCXX_3.4)</code> [ISOCXX]
<code>ctype<wchar_t>::ctype(unsigned long)(GLIBCXX_3.4)</code> [ISOCXX]
<code>ctype<wchar_t>::ctype(__locale_struct*, unsigned long)(GLIBCXX_3.4)</code> [ISOCXX]
<code>ctype<wchar_t>::ctype(unsigned long)(GLIBCXX_3.4)</code> [ISOCXX]

12.1.57 Class `ctype_byname<char>`

12.1.57.1 Class data for `ctype_byname<char>`

The virtual table for the `std::ctype_byname<char>` class is described in the generic part of this specification.

The Run Time Type Information for the `std::ctype_byname<char>` class is described by [Table 12-42](#)

Table 12-42 `typeinfo` for `ctype_byname<char>`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>

		2

12.1.121.2 Interfaces for Class time_put<wchar_t, ostreambuf_iterator<wchar_t, char_traits<wchar_t>>>

An LSB conforming implementation shall provide the architecture specific methods for Class `std::time_put<wchar_t, std::ostreambuf_iterator<wchar_t, std::char_traits<wchar_t>>>` specified in [Table 12-201](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-201 libstdcxx - Class time_put<wchar_t, ostreambuf_iterator<wchar_t, char_traits<wchar_t>>> Function Interfaces

<code>time_put<wchar_t, ostreambuf_iterator<wchar_t, char_traits<wchar_t>>>::time_put(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>time_put<wchar_t, ostreambuf_iterator<wchar_t, char_traits<wchar_t>>>::time_put(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>

12.1.122 Class money_punct<char, false>

12.1.122.1 Class data for money_punct<char, false>

The virtual table for the `std::money_punct<char, false>` class is described in the generic part of this specification.

12.1.122.2 Interfaces for Class money_punct<char, false>

An LSB conforming implementation shall provide the architecture specific methods for Class `std::money_punct<char, false>` specified in [Table 12-202](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-202 libstdcxx - Class money_punct<char, false> Function Interfaces

<code>money_punct<char, false>::money_punct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>money_punct<char, false>::money_punct(__money_punct_cache<char, false>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>money_punct<char, false>::money_punct(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>money_punct<char, false>::money_punct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>money_punct<char, false>::money_punct(__money_punct_cache<char, false>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>money_punct<char, false>::money_punct(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>

12.1.123 Class moneypunct<char, true>

12.1.123.1 Class data for moneypunct<char, true>

The virtual table for the std::moneypunct<char, true> class is described in the generic part of this specification.

12.1.123.2 Interfaces for Class moneypunct<char, true>

An LSB conforming implementation shall provide the architecture specific methods for Class std::moneypunct<char, true> specified in [Table 12-203](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-203 libstdcxx - Class moneypunct<char, true> Function Interfaces

moneypunct<char, true>::moneypunct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<char, true>::moneypunct(__moneypunct_cache<char, true>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<char, true>::moneypunct(unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<char, true>::moneypunct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<char, true>::moneypunct(__moneypunct_cache<char, true>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<char, true>::moneypunct(unsigned long)(GLIBCXX_3.4) [ISOCXX]

12.1.124 Class moneypunct<wchar_t, false>

12.1.124.1 Class data for moneypunct<wchar_t, false>

The virtual table for the std::moneypunct<wchar_t, false> class is described in the generic part of this specification.

12.1.124.2 Interfaces for Class moneypunct<wchar_t, false>

An LSB conforming implementation shall provide the architecture specific methods for Class std::moneypunct<wchar_t, false> specified in [Table 12-204](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-204 libstdcxx - Class moneypunct<wchar_t, false> Function Interfaces

moneypunct<wchar_t, false>::moneypunct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<wchar_t, false>::moneypunct(__moneypunct_cache<wchar_t, false>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<wchar_t, false>::moneypunct(unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<wchar_t, false>::moneypunct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<wchar_t, false>::moneypunct(__moneypunct_cache<wchar_t, false>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct<wchar_t, false>::moneypunct(unsigned long)(GLIBCXX_3.4) [ISOCXX]

12.1.125 Class `moneypunct<wchar_t, true>`

12.1.125.1 Class data for `moneypunct<wchar_t, true>`

The virtual table for the `std::moneypunct<wchar_t, true>` class is described in the generic part of this specification.

12.1.125.2 Interfaces for Class `moneypunct<wchar_t, true>`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::moneypunct<wchar_t, true>` specified in [Table 12-205](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-205 libstdcxx - Class `moneypunct<wchar_t, true>` Function Interfaces

<code>moneypunct<wchar_t, true>::moneypunct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>moneypunct<wchar_t, true>::moneypunct(__moneypunct_cache<wchar_t, true>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>moneypunct<wchar_t, true>::moneypunct(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>moneypunct<wchar_t, true>::moneypunct(__locale_struct*, char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>moneypunct<wchar_t, true>::moneypunct(__moneypunct_cache<wchar_t, true>*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>moneypunct<wchar_t, true>::moneypunct(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>

12.1.126 Class `moneypunct_byname<char, false>`

12.1.126.1 Class data for `moneypunct_byname<char, false>`

The virtual table for the `std::moneypunct_byname<char, false>` class is described in the generic part of this specification.

The Run Time Type Information for the `std::moneypunct_byname<char, false>` class is described by [Table 12-206](#)

Table 12-206 typeid for `moneypunct_byname<char, false>`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeid name for <code>moneypunct_byname<char, false></code>

12.1.126.2 Interfaces for Class `moneypunct_byname<char, false>`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::moneypunct_byname<char, false>` specified in [Table 12-207](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-207 libstdcxx - Class `moneypunct_byname<char, false>` Function Interfaces

<code>moneypunct_byname<char, false>::moneypunct_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>moneypunct_byname<char, false>::moneypunct_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>

12.1.127 Class moneypunct_byname<char, true>

12.1.127.1 Class data for moneypunct_byname<char, true>

The virtual table for the std::moneypunct_byname<char, true> class is described in the generic part of this specification.

The Run Time Type Information for the std::moneypunct_byname<char, true> class is described by [Table 12-208](#)

Table 12-208 typeid for moneypunct_byname<char, true>

Base Vtable	vtable for __cxxabiv1::__si_class_type_info
Name	typeid name for moneypunct_byname<char, true>

12.1.127.2 Interfaces for Class moneypunct_byname<char, true>

An LSB conforming implementation shall provide the architecture specific methods for Class std::moneypunct_byname<char, true> specified in [Table 12-209](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-209 libstdc++ - Class moneypunct_byname<char, true> Function Interfaces

moneypunct_byname<char, true>::moneypunct_byname(char const*, unsigned long) (GLIBCXX_3.4) [ISOCXX]
moneypunct_byname<char, true>::moneypunct_byname(char const*, unsigned long) (GLIBCXX_3.4) [ISOCXX]

12.1.128 Class moneypunct_byname<wchar_t, false>

12.1.128.1 Class data for moneypunct_byname<wchar_t, false>

The virtual table for the std::moneypunct_byname<wchar_t, false> class is described in the generic part of this specification.

The Run Time Type Information for the std::moneypunct_byname<wchar_t, false> class is described by [Table 12-210](#)

Table 12-210 typeid for moneypunct_byname<wchar_t, false>

Base Vtable	vtable for __cxxabiv1::__si_class_type_info
Name	typeid name for moneypunct_byname<wchar_t, false>

12.1.128.2 Interfaces for Class moneypunct_byname<wchar_t, false>

An LSB conforming implementation shall provide the architecture specific methods for Class std::moneypunct_byname<wchar_t, false> specified in [Table 12-211](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-211 libstdc++ - Class moneypunct_byname<wchar_t, false> Function Interfaces

moneypunct_byname<wchar_t, false>::moneypunct_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]
moneypunct_byname<wchar_t, false>::moneypunct_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]

12.1.129 Class `moneypunct_byname<wchar_t, true>`

12.1.129.1 Class data for `moneypunct_byname<wchar_t, true>`

The virtual table for the `std::moneypunct_byname<wchar_t, true>` class is described in the generic part of this specification.

The Run Time Type Information for the `std::moneypunct_byname<wchar_t, true>` class is described by [Table 12-212](#)

Table 12-212 typeinfo for `moneypunct_byname<wchar_t, true>`

Base Vtable	vtable for <code>__cxxabiv1::__si_class_type_info</code>
Name	typeinfo name for <code>moneypunct_byname<wchar_t, true></code>

12.1.129.2 Interfaces for Class `moneypunct_byname<wchar_t, true>`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::moneypunct_byname<wchar_t, true>` specified in [Table 12-213](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-213 `libstdcxx` - Class `moneypunct_byname<wchar_t, true>` Function Interfaces

<code>moneypunct_byname<wchar_t, true>::moneypunct_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>moneypunct_byname<wchar_t, true>::moneypunct_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>

12.1.130 Class `money_base`

12.1.130.1 Class data for `money_base`

The Run Time Type Information for the `std::money_base` class is described by [Table 12-214](#)

Table 12-214 typeinfo for `money_base`

Base Vtable	vtable for <code>__cxxabiv1::__class_type_info</code>
Name	typeinfo name for <code>money_base</code>

12.1.130.2 Interfaces for Class `money_base`

No external methods are defined for `libstdcxx` - Class `std::money_base` in this part of the specification. See also the generic specification.

12.1.131 Class `money_get<char, istreambuf_iterator<char, char_traits<char>>>`

12.1.131.1 Class data for `money_get<char, istreambuf_iterator<char, char_traits<char>>>`

The virtual table for the `std::money_get<char, std::istreambuf_iterator<char, std::char_traits<char>>>` class is described in the generic part of this specification.

The Run Time Type Information for the `std::money_get<char, std::istreambuf_iterator<char, std::char_traits<char>>>` class is described by [Table 12-215](#)

Table 12-215 typeid for money_get<char, istreambuf_iterator<char, char_traits<char>>>

Base Vtable	vtable for __cxxabiv1::__si_class_type_info
Name	typeid name for money_get<char, istreambuf_iterator<char, char_traits<char>>>

12.1.131.2 Interfaces for Class money_get<char, istreambuf_iterator<char, char_traits<char>>>

An LSB conforming implementation shall provide the architecture specific methods for Class std::money_get<char, std::istreambuf_iterator<char, std::char_traits<char>>> specified in [Table 12-216](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-216 libstdc++ - Class money_get<char, istreambuf_iterator<char, char_traits<char>>> Function Interfaces

12.1.143 Class `gslice`

12.1.143.1 Class data for `gslice`

12.1.143.2 Interfaces for Class `gslice`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::gslice` specified in [Table 12-242](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-242 libstdcxx - Class `gslice` Function Interfaces

<code>gslice::_Indexer::_Indexer(unsigned long, valarray<unsigned long> const&, valarray<unsigned long> const&)(GLIBCXX_3.4)</code> [ISOCXX]
<code>gslice::_Indexer::_Indexer(unsigned long, valarray<unsigned long> const&, valarray<unsigned long> const&)(GLIBCXX_3.4)</code> [ISOCXX]

12.1.144 Class `__basic_file<char>`

12.1.144.1 Class data for `__basic_file<char>`

12.1.144.2 Interfaces for Class `__basic_file<char>`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::__basic_file<char>` specified in [Table 12-243](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-243 libstdcxx - Class `__basic_file<char>` Function Interfaces

<code>__basic_file<char>::xsgetn(char*, int)(GLIBCXX_3.4) [ISOCXX]</code>
<code>__basic_file<char>::xsputn(char const*, int)(GLIBCXX_3.4) [ISOCXX]</code>
<code>__basic_file<char>::seekoff(long long, _Ios_Seekdir)(GLIBCXX_3.4) [ISOCXX]</code>
<code>__basic_file<char>::xsputn_2(char const*, int, char const*, int)(GLIBCXX_3.4) [ISOCXX]</code>

12.1.145 Class `_List_node_base`

12.1.145.1 Interfaces for Class `_List_node_base`

No external methods are defined for libstdcxx - Class `std::_List_node_base` in this part of the specification. See also the generic specification.

12.1.146 Class `valarray<unsigned int>`

12.1.146.1 Class data for `valarray<unsigned int>`

12.1.146.2 Interfaces for Class `valarray<unsigned int>`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::valarray<unsigned int>` specified in [Table 12-244](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-244 libstdcxx - Class `valarray<unsigned int>` Function Interfaces

<code>valarray<unsigned long>::size() const(GLIBCXX_3.4) [ISOCXX]</code>
<code>valarray<unsigned long>::valarray(valarray<unsigned long> const&)(GLIBCXX_3.4) [ISOCXX]</code>
<code>valarray<unsigned long>::valarray(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>valarray<unsigned long>::valarray(valarray<unsigned long> const&)(GLIBCXX_3.4) [ISOCXX]</code>
<code>valarray<unsigned long>::valarray(unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>
<code>valarray<unsigned long>::~~valarray()(GLIBCXX_3.4) [ISOCXX]</code>
<code>valarray<unsigned long>::~~valarray()(GLIBCXX_3.4) [ISOCXX]</code>
<code>valarray<unsigned long>::operator[](unsigned long)(GLIBCXX_3.4) [ISOCXX]</code>

12.1.147 Class `allocator<char>`

12.1.147.1 Class data for `allocator<char>`

12.1.147.2 Interfaces for Class `allocator<char>`

No external methods are defined for libstdcxx - Class `std::allocator<char>` in this part of the specification. See also the generic specification.

12.1.148 Class `allocator<wchar_t>`

12.1.148.1 Class data for `allocator<wchar_t>`

12.1.148.2 Interfaces for Class `allocator<wchar_t>`

No external methods are defined for libstdcxx - Class `std::allocator<wchar_t>` in this part of the specification. See also the generic specification.

12.1.149 Class `__gnu_cxx::__pool<true>`

12.1.149.1 Interfaces for Class `__gnu_cxx::__pool<true>`

An LSB conforming implementation shall provide the architecture specific methods for Class `__gnu_cxx::__pool<true>` specified in [Table 12-245](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-245 libstdcxx - Class `__gnu_cxx::__pool<true>` Function Interfaces

<code>__gnu_cxx::__pool<true>::_M_reclaim_block(char*, unsigned long)</code> (GLIBCXX_3.4.4) [LSB]
<code>__gnu_cxx::__pool<true>::_M_reserve_block(unsigned long, unsigned long)</code> (GLIBCXX_3.4.4) [LSB]

12.1.150 Class `__gnu_cxx::__pool<false>`

12.1.150.1 Interfaces for Class `__gnu_cxx::__pool<false>`

An LSB conforming implementation shall provide the architecture specific methods for Class `__gnu_cxx::__pool<false>` specified in [Table 12-246](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-246 libstdcxx - Class `__gnu_cxx::__pool<false>` Function Interfaces

<code>__gnu_cxx::__pool<false>::_M_reclaim_block(char*, unsigned long)</code> (GLIBCXX_3.4.4) [LSB]
<code>__gnu_cxx::__pool<false>::_M_reserve_block(unsigned long, unsigned long)</code> (GLIBCXX_3.4.4) [LSB]

12.1.151 Class `__gnu_cxx::free_list`

12.1.151.1 Interfaces for Class `__gnu_cxx::free_list`

An LSB conforming implementation shall provide the architecture specific methods for Class `__gnu_cxx::free_list` specified in [Table 12-247](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-247 libstdcxx - Class `__gnu_cxx::free_list` Function Interfaces

<code>__gnu_cxx::free_list::_M_get(unsigned long)</code> (GLIBCXX_3.4.4) [LSB]
--

12.1.152 Class `locale::_Impl`

12.1.152.1 Interfaces for Class `locale::_Impl`

An LSB conforming implementation shall provide the architecture specific methods for Class `std::locale::_Impl` specified in [Table 12-248](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-248 libstdcxx - Class `locale::_Impl` Function Interfaces

<code>locale::_Impl::_M_install_cache(locale::facet const*, unsigned long)</code> (GLIBCXX_3.4.7) [ISOCXX]

12.1.153 Namespace `std` Functions

12.1.153.1 Interfaces for Namespace `std` Functions

An LSB conforming implementation shall provide the architecture specific methods for Namespace `std` Functions specified in [Table 12-249](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 12-249 libstdcxx - Namespace std Functions Function Interfaces

<pre>int __copy_streambufs<char, char_traits<char> >>(basic_streambuf<char, char_traits<char> >*, basic_streambuf<char, char_traits<char> >*) (GLIBCXX_3.4.6) [ISOCXX]</pre>

<pre>int __copy_streambufs<wchar_t, char_traits<wchar_t> >>(basic_streambuf<wchar_t, char_traits<wchar_t> >*, basic_streambuf<wchar_t, char_traits<wchar_t> >*) (GLIBCXX_3.4.6) [ISOCXX]</pre>

12.1.154 Class char_traits<char>

12.1.154.1 Interfaces for Class char_traits<char>

No external methods are defined for libstdcxx - Class std::char_traits<char> in this part of the specification. See also the generic specification.

12.1.155 Class char_traits<wchar_t>

12.1.155.1 Interfaces for Class char_traits<wchar_t>

No external methods are defined for libstdcxx - Class std::char_traits<wchar_t> in this part of the specification. See also the generic specification.

12.2 Interface Definitions for libstdcxx

The interfaces defined on the following pages are included in libstdcxx and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 12.1](#) shall behave as described in the referenced base document. For interfaces referencing LSB and not listed below, please see the generic part of the specification.

VI Package Format and Installation

13 Software Installation

13.1 Package Dependencies

The LSB runtime environment shall provide the following dependencies.

`lsb-core-s390`

This dependency is used to indicate that the application is dependent on features contained in the LSB-Core specification.

This dependency shall have a version of 5.0.

Other LSB modules may add additional dependencies; such dependencies shall have the format `lsb-module-s390`.

13.2 Package Architecture Considerations

All packages must specify an architecture of `s390`. A LSB runtime environment must accept an architecture of `s390` even if the native architecture is different.

The archnum value in the Lead Section shall be 0x000E.

Annex A Alphabetical Listing of Interfaces by Library

A.1 libc

The behavior of the interfaces in this library is specified by the following Standards.

[Large File Support](#) [LFS]

[LSB Core - Generic](#) [LSB]

[RFC 5531/4506 RPC & XDR](#) [RPC + XDR]

[SUSv2](#) [SUSv2]

[POSIX 1003.1-2001 \(ISO/IEC 9945-2003\)](#) [SUSv3]

[POSIX 1003.1-2008 \(ISO/IEC 9945-2009\)](#) [SUSv4]

[SVID Issue 4](#) [SVID.4]

Annex B GNU Free Documentation License (Informative)

This specification is published under the terms of the GNU Free Documentation License, Version 1.1, March 2000

Copyright (C) 2000 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

B.1 PREAMBLE

The purpose of this License is to make a manual, textbook, or other written document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondly, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

B.2 APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you".

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (For example, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, whose contents can be viewed and edited directly and straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup has been designed to thwart or discourage subsequent modification by readers is not Transparent. A copy that is not "Transparent"

is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML designed for human modification. Opaque formats include PostScript, PDF, proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

B.3 VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or non-commercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

B.4 COPYING IN QUANTITY

If you publish printed copies of the Document numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a publicly-accessible computer-network location containing a complete Transparent copy of the Document, free of added material, which the general network-using public has access to download anonymously at no charge using public-standard network protocols. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

B.5 MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
- B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has less than five).
- C. State on the Title page the name of the publisher of the Modified Version, as the publisher.
- D. Preserve all the copyright notices of the Document.
- E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- H. Include an unaltered copy of this License.
- I. Preserve the section entitled "History", and its title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
- J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
- K. In any section entitled "Acknowledgements" or "Dedications", preserve the section's title, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
- L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.
- M. Delete any section entitled "Endorsements". Such a section may not be included in the Modified Version.
- N. Do not retitle any existing section as "Endorsements" or to conflict in title with any Invariant Section.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These

titles must be distinct from any other section titles.

You may add a section entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties--for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

B.6 COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections entitled "History" in the various original documents, forming one section entitled "History"; likewise combine any sections entitled "Acknowledgements", and any sections entitled "Dedications". You must delete all sections entitled "Endorsements."

B.7 COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

B.8 AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, does not as a whole count as a Modified Version of the Document, provided no compilation copyright is claimed for the compilation. Such a compilation is called an "aggregate", and this License does not apply to the other self-contained works thus compiled with the Document, on account of their being thus compiled, if they are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one quarter of the entire aggregate, the Document's Cover Texts may be placed on covers that surround only the Document within the aggregate. Otherwise they must appear on covers around the whole aggregate.

B.9 TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License provided that you also include the original English version of this License. In case of a disagreement between the translation and the original English version of this License, the original English version will prevail.

B.10 TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided for under this License. Any other attempt to copy, modify, sublicense or distribute the Document is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

B.11 FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation.

B.12 How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright (c) YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.1 or any later version published by the Free Software Foundation; with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have no Invariant Sections, write "with no Invariant Sections" instead of saying which ones are invariant. If you have no Front-Cover Texts, write "no Front-Cover Texts" instead of "Front-Cover Texts being LIST"; likewise for Back-Cover Texts.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
