# **Contents**

I Introductory Elements
1 Scope
1.1 General
1.2 Module Specific Scope
2 References.
2.1 Normative References.
2.2 Informative References/Bibliography
3 Requirements.
3.1 Relevant Libraries
3.2 LSB Implementation Conformance.
3.3 LSB Application Conformance
4 Terms and Definitions.
5 Documentation Conventions.
II Executable and Linking Format (ELF)
6 Introduction.
7 Low Level System Information.
7.1 Machine Interface.
7.2 Function Calling Sequence
7.3 Traceback Tables.
7.4 Process Initialization.
7.5 Coding Examples.
8 Object Format.
8.1 Introduction.
8.2 ELF Header
8.3 Special Sections.
<u>8.4 TOC</u>
8.5 Symbol Table
8.6 Relocation.
9 Program Loading and Dynamic Linking
9.1 Introduction.
9.2 Program Loading
9.3 Dynamic Linking
III Base Libraries.
10 Libraries.
10.1 Program Interpreter/Dynamic Linker
10.2 Interfaces for libc.
10.3 Data Definitions for libc
10.4 Interfaces for libm.
10.5 Data Definitions for libm
10.6 Interface Definitions for libm.
10.7 Interfaces for libpthread
10.8 Data Definitions for libpthread.
10.9 Interfaces for libgce s
10.10 Data Definitions for libgcc s
10.11 Interface Definitions for libgcc s
10.12 Interfaces for libdl
10.13 Data Definitions for libdl
10.14 Interfaces for libcrypt
10.15 Data Definitions for libcrypt
IV Utility Libraries
11 Libraries.
11.1 Interfaces for libz
11.2 Data Definitions for libz.
11.3 Interfaces for libncurses.

11.4 Data Definitions for libncurses.
11.5 Interfaces for libncursesw
11.6 Data Definitions for libncursesw
11.7 Interfaces for libutil
V Base Libraries
12 Libraries
12.1 Interfaces for libstdcxx.
12.2 Interface Definitions for libstdcxx.
VI Package Format and Installation
13 Software Installation.
13.1 Package Dependencies.
13.2 Package Architecture Considerations.
_
A Alphabetical Listing of Interfaces by Library
<u>A.1 libc</u>
A.2 libcrypt
<u>A.3 libdl</u>
A.4 libgcc s.
A.5 libm.
A.6 libpthread.
A.7 librt.
A.8 libutil
B GNU Free Documentation License (Informative)
B.1 PREAMBLE.
B.2 APPLICABILITY AND DEFINITIONS
B.3 VERBATIM COPYING
B.4 COPYING IN QUANTITY
B.5 MODIFICATIONS
B.6 COMBINING DOCUMENTS.
B.7 COLLECTIONS OF DOCUMENTS
B.8 AGGREGATION WITH INDEPENDENT WORKS
B.9 TRANSLATION
B.10 TERMINATION
B.11 FUTURE REVISIONS OF THIS LICENSE
B.12 How to use this License for your documents

# **List of Tables**

2-1 Normative References.
2-2 Other References.
3-1 Standard Library Names.
8-1 ELF Special Sections8-2 Additional Special Sections
10.2 libc Definition
10-2 libc - RPC Function Interfaces.
10-3 libc - RPC Deprecated Function Interfaces.
10-4 libc - System Calls Function Interfaces.
10-5 libc - System Calls Deprecated Function Interfaces
10-6 libc - Standard I/O Function Interfaces.
10-7 libc - Standard I/O Deprecated Function Interfaces.
10-8 libc - Standard I/O Data Interfaces.
10-9 libc - Signal Handling Function Interfaces
10-10 libc - Signal Handling Deprecated Function Interfaces
10-11 libc - Signal Handling Data Interfaces.
10-12 libc - Localization Functions Function Interfaces
10-13 libc - Localization Functions Data Interfaces
10-14 libc - Posix Spawn Option Function Interfaces
10-15 libc - Posix Advisory Option Function Interfaces
10-16 libc - Socket Interface Function Interfaces
10-17 libc - Socket Interface Data Interfaces.
10-18 libc - Wide Characters Function Interfaces.
10-19 libc - Wide Characters Deprecated Function Interfaces.
10-20 libc - String Functions Function Interfaces.
10-21 libc - String Functions Deprecated Function Interfaces.
10-22 libc - IPC Functions Function Interfaces.
10-23 libc - Regular Expressions Function Interfaces.
10-24 libc - Character Type Functions Function Interfaces.
10-25 libc - Time Manipulation Function Interfaces.
10-26 libc - Time Manipulation Data Interfaces.
10-27 libc - Terminal Interface Functions Function Interfaces
10-28 libc - System Database Interface Function Interfaces
10-29 libe - System Database Interface Punction Interfaces
10-30 libc - Language Support Function Interfaces.
10-30 libe - Large File Support Function Interfaces.
10-32 libe - Large File Support Deprecated Function Interfaces
10-33 libc - Standard Library Function Interfaces.
10-34 libc - Standard Library Deprecated Function Interfaces
10-35 libc - Standard Library Data Interfaces.
10-36 libc - GNU Extensions for libc Function Interfaces.
10-37 libm Definition.
10-38 libm - Math Function Interfaces.
10-39 libm - Math Deprecated Function Interfaces
10-40 libm - Math Data Interfaces.
10-41 libpthread Definition
10-42 libpthread - Realtime Threads Function Interfaces
10-43 libpthread - Advanced Realtime Threads Function Interfaces
10-44 libpthread - Posix Threads Function Interfaces.
10-45 libpthread - Posix Threads Deprecated Function Interfaces.
10-46 libpthread - Thread aware versions of libc interfaces Function Interfaces
10-47 libpthread - GNU Extensions for libpthread Function Interfaces.
10-48 libpthread - System Calls Function Interfaces
10-49 libpthread - Standard I/O Function Interfaces.
10-50 libpthread - Signal Handling Function Interfaces

10-51 libpthread - Standard Library Function Interfaces
10-52 libpthread - Socket Interface Function Interfaces
10-53 libpthread - Terminal Interface Functions Function Interfaces
10-54 libgcc s Definition.
10-55 libgcc s - Unwind Library Function Interfaces.
10-56 libdl Definition.
10-57 libdl - Dynamic Loader Function Interfaces.
10-58 liberypt Definition.
10-59 libcrypt - Encryption Function Interfaces.
11-1 libz Definition.
11-2 libncurses Definition.
11-3 libncursesw Definition.
11-4 libutil Definition.
11-5 libutil - Utility Functions Function Interfaces
12-1 libstdcxx Definition.
12-2 libstdcxx - C++ Runtime Support Function Interfaces
12-3 typeinfo for type info.
12-4 typeinfo for cxxabiv1:: enum type info
12-5 typeinfo for cxxabiv1:: array type info
12-6 Primary vtable for cxxabiv1:: class type info
12-7 typeinfo for cxxabiv1:: class type info
12-8 libstdcxx - Class cxxabiv1:: class type info Function Interfaces
12-9 typeinfo for cxxabiv1:: pbase type info
12-10 typeinfo forcxxabiv1::pointer_type_info
12-11 typeinfo forcxxabiv1::function_type_info
12-12 Primary vtable for cxxabiv1:: si class type info
12-13 typeinfo for cxxabiv1:: si class type info
12-14 libstdcxx - Class cxxabiv1:: si class type info Function Interfaces
12-15 Primary vtable for cxxabiv1:: vmi class type info
12-16 typeinfo for cxxabiv1:: vmi class type info
12-17 libstdcxx - Class cxxabiv1:: vmi class type info Function Interfaces
12-18 typeinfo for cxxabiv1:: fundamental type info
12-18 typeinfo for cxxabiv1:: fundamental type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo forcxxabiv1:: pointer to member type info
12-19 typeinfo for cxxabiv1:: pointer to member type info
12-19 typeinfo forcxxabiv1:: pointer to member type info

12-44 typeinfo for ctype byname <wchar_t></wchar_t>
12-45 libstdcxx - Class ctype byname <wchar t=""> Function Interfaces</wchar>
12-46 libstdexx - Class basic string <char, char="" traits<char="">, allocator<char>&gt;</char></char,>
Function Interfaces.
12-47 libstdcxx - Class basic string <wchar char="" t="" t,="" traits<wchar="">,</wchar>
allocator <wchar t="">&gt; Function Interfaces.</wchar>
12-48 Primary vtable for basic stringstream <char, char="" traits<char="">, allocator<char>&gt;</char></char,>
12-49 Secondary vtable for basic_stringstream <char, char_traits<char="">, allocator<char></char></char,>
<u> </u>
12-50 Secondary vtable for basic stringstream <char, char="" traits<char="">, allocator<char></char></char,>
<u>&gt;</u>
12-51 VTT for basic_stringstream <char, char_traits<char="">, allocator<char>&gt;</char></char,>
12-52 libstdcxx - Class basic stringstream <char, char="" traits<char="">, allocator<char>&gt;</char></char,>
Function Interfaces.
12-53 Primary vtable for basic stringstream <wchar char="" t="" t,="" traits<wchar="">,</wchar>
allocator <wchar t="">&gt;</wchar>
12-54 Secondary vtable for basic stringstream <wchar char="" t="" t,="" traits<wchar="">,</wchar>
allocator <wchar t="">&gt;</wchar>
12-55 Secondary vtable for basic_stringstream <wchar_t, char_traits<wchar_t="">,</wchar_t,>
allocator <wchar t="">&gt;</wchar>
12-56 VTT for basic stringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""></wchar></wchar>
<u> </u>
12-57 libstdcxx - Class basic stringstream <wchar char="" t="" t,="" traits<wchar="">,</wchar>
allocator <wchar_t> &gt; Function Interfaces.</wchar_t>
12-58 Primary vtable for basic istringstream <char, char="" traits<char="">, allocator<char>&gt;</char></char,>
12-59 Secondary vtable for basic istringstream <char, char="" traits<char="">,</char,>
allocator <char>&gt;</char>
12-60 VTT for basic istringstream <char, char_traits<char="">, allocator<char>&gt;</char></char,>
12-61 libstdcxx - Class basic istringstream <char, char="" traits<char="">, allocator<char>&gt;</char></char,>
<u>Function Interfaces</u>
12-62 Primary vtable for basic istringstream <wchar char="" t="" t,="" traits<wchar="">,</wchar>
allocator <wchar_t>&gt;</wchar_t>
12-63 Secondary vtable for basic istringstream <wchar char="" t="" t,="" traits<wchar="">,</wchar>
allocator <wchar t="">&gt;</wchar>
<u>allocator<wchar_t>&gt;</wchar_t></u>
12-64 VTT for basic_istringstream <wchar_t, char_traits<wchar_t="">, allocator<wchar_t></wchar_t></wchar_t,>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""></wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""></wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""></wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""></wchar></wchar>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic_istringstream <wchar_t, char_traits<wchar_t="">, allocator<wchar_t> </wchar_t></wchar_t,>
12-64 VTT for basic istringstream <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""> </wchar></wchar>
12-64 VTT for basic_istringstream <wchar_t, char_traits<wchar_t="">, allocator<wchar_t>  \[ \]</wchar_t></wchar_t,>
12-64 VTT for basic_istringstream <wchar_t, char_traits<wchar_t="">, allocator<wchar_t></wchar_t></wchar_t,>
12-64 VTT for basic_istringstream <wchar_t, char_traits<wchar_t="">, allocator<wchar_t>  \[ \]</wchar_t></wchar_t,>

<u>allocator<wchar_t>&gt;</wchar_t></u>
12-78 typeinfo for basic stringbuf <wchar char="" t="" t,="" traits<wchar="">, allocator<wchar t=""></wchar></wchar>
<u>&gt;</u>
12-79 libstdexx - Class basic stringbuf <wchar char="" t="" t,="" traits<wchar="">,</wchar>
<u>allocator<wchar_t>&gt; Function Interfaces</wchar_t></u>
12-80 Primary vtable for basic iostream <char, char="" traits<char="">&gt;</char,>
12-81 Secondary vtable for basic iostream <char, char="" traits<char="">&gt;</char,>
12-82 Secondary vtable for basic_iostream <char, char_traits<char="">&gt;</char,>
12-83 VTT for basic iostream <char, char_traits<char="">&gt;</char,>
12-84 libstdcxx - Class basic iostream <char, char="" traits<char=""> &gt; Function Interfaces</char,>
12-85 Primary vtable for basic iostream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-86 Secondary vtable for basic_iostream <wchar_t, char_traits<wchar_t="">&gt;</wchar_t,>
12-87 Secondary vtable for basic_iostream <wchar_t, char_traits<wchar_t="">&gt;</wchar_t,>
12-88 VTT for basic_iostream <wchar_t, char_traits<wchar_t="">&gt;</wchar_t,>
12-89 libstdexx - Class basic iostream <wchar char="" t="" t,="" traits<wchar="">&gt; Function</wchar>
Interfaces.
12-90 Primary vtable for basic istream <char, char="" traits<char="">&gt;</char,>
12-91 Secondary vtable for basic_istream <char, char_traits<char="">&gt;</char,>
12-92 VTT for basic istream <char, char_traits<char="">&gt;</char,>
12-93 libstdcxx - Class basic istream <char, char="" traits<char="">&gt; Function Interfaces</char,>
12-94 Primary vtable for basic istream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-95 Secondary vtable for basic istream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-96 VTT for basic istream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-97 libstdcxx - Class basic_istream <wchar_t, char_traits<wchar_t="">&gt; Function</wchar_t,>
Interfaces.
12-98 Primary vtable for basic ostream <char, char="" traits<char="">&gt;</char,>
12-99 Secondary vtable for basic ostream <char, char="" traits<char="">&gt;</char,>
12-100 VTT for basic ostream <char, char_traits<char="">&gt;</char,>
12-101 libstdcxx - Class basic ostream <char, char="" traits<char=""> &gt; Function Interfaces</char,>
12-102 Primary vtable for basic ostream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-103 Secondary vtable for basic ostream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-104 VTT for basic ostream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-105 libstdexx - Class basic ostream <wchar char="" t="" t,="" traits<wchar="">&gt; Function</wchar>
Interfaces.
12-106 Primary vtable for basic_fstream <char, char_traits<char="">&gt;</char,>
12-107 Secondary vtable for basic fstream <char, char="" traits<char="">&gt;</char,>
12-108 Secondary vtable for basic fstream <char, char="" traits<char="">&gt;</char,>
12-109 VTT for basic_fstream <char, char_traits<char="">&gt;</char,>
12-110 libstdcxx - Class basic_fstream <char, char_traits<char=""> &gt; Function Interfaces</char,>
12-111 Primary vtable for basic_fstream <wchar_t, char_traits<wchar_t="">&gt;</wchar_t,>
12-112 Secondary vtable for basic fstream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-113 Secondary vtable for basic fstream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-114 VTT for basic fstream <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-115 libstdcxx - Class basic_fstream <wchar_t, char_traits<wchar_t="">&gt; Function_</wchar_t,>
Interfaces.
12-116 Primary vtable for basic ifstream <char, char="" traits<char="">&gt;</char,>
10 11 7 0 1 1 1 1 0 1 1 1 10 1 1 1 1 1 1
12-117 Secondary vtable for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>
12-118 VTT for basic ifstream <char, char="" traits<char="">&gt;</char,>

12-128 Primary vtable for basic of stream < wchar t, char traits < wchar t >>
12-129 Secondary vtable for basic of stream < wchar t, char traits < wchar t>>
12-130 VTT for basic of stream < wchar t, char traits < wchar t> >
12-131 libstdcxx - Class basic ofstream <wchar char="" t="" t,="" traits<wchar="">&gt; Function</wchar>
Interfaces.
12-132 Primary vtable for basic streambuf <char, char="" traits<char="">&gt;</char,>
12-133 typeinfo for basic streambuf <char, char="" traits<char="">&gt;</char,>
12-134 libstdcxx - Class basic_streambuf <char, char_traits<char="">&gt; Function Interfaces</char,>
12-135 Primary vtable for basic_streambuf <wchar_t, char_traits<wchar_t="">&gt;</wchar_t,>
12-136 typeinfo for basic_streambuf <wchar_t, char_traits<wchar_t="">&gt;</wchar_t,>
12-137 libstdcxx - Class basic streambuf <wchar char="" t="" t,="" traits<wchar="">&gt; Function</wchar>
Interfaces.
12-138 Primary vtable for basic filebuf <char, char="" traits<char="">&gt;</char,>
12-139 typeinfo for basic filebuf <char, char="" traits<char="">&gt;</char,>
12-140 libstdcxx - Class basic filebuf <char, char="" traits<char=""> &gt; Function Interfaces</char,>
12-141 Primary vtable for basic filebuf <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-142 typeinfo for basic filebuf <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-143 libstdcxx - Class basic_filebuf <wchar_t, char_traits<wchar_t=""> &gt; Function_</wchar_t,>
<u>Interfaces</u>
12-144 typeinfo for ios base
12-145 typeinfo for basic ios <wchar char="" t="" t,="" traits<wchar="">&gt;</wchar>
12-146 typeinfo for ios base::failure
12-147 typeinfo for timepunct <char></char>
12-148 libstdcxx - Classtimepunct <char> Function Interfaces</char>
12-149 typeinfo for timepunct <wchar t=""></wchar>
12-150 libstdcxx - Class timepunct <wchar t=""> Function Interfaces</wchar>
12-151 typeinfo for messages base
12-152 libstdcxx - Class messages <char> Function Interfaces</char>
12-153 libstdcxx - Class messages <wchar t=""> Function Interfaces</wchar>
12-154 typeinfo for messages byname <char></char>
12-155 libstdcxx - Class messages byname <char> Function Interfaces</char>
12-156 typeinfo for messages byname <wchar t=""></wchar>
12-150 typenno for messages byname <wchar t=""> Function Interfaces</wchar>
12-157 hosticxx - class messages byhame wenar to runction merraces.
12-156 typenno for humpunct ≤ char > Function Interfaces
12-159 hosticxx - Class humpunct <char> runction interfaces</char>
12-161 libstdcxx - Class numpunct <wchar t=""> Function Interfaces</wchar>
12-162 typeinfo for numpunct byname <char></char>
12-163 libstdcxx - Class numpunct byname <char> Function Interfaces</char>
12-164 typeinfo for numpunct_byname <wchar_t></wchar_t>
12-165 libstdcxx - Class numpunct byname <wchar t=""> Function Interfaces</wchar>
12-166 typeinfo for codecvt base.
12-167 Primary vtable for codecvt <char, char,="" mbstate="" t=""></char,>
12-168 typeinfo for codecvt <char, char,mbstate_t=""></char,>
12-169 libstdcxx - Class codecvt <char, char,mbstate_t=""> Function Interfaces</char,>
12-170 Primary vtable for codecvt <wchar char,="" mbstate="" t="" t,=""></wchar>
12-171 typeinfo for codecvt <wchar char,="" mbstate="" t="" t,=""></wchar>
12-172 libstdcxx - Class codecvt <wchar char,="" mbstate="" t="" t,=""> Function Interfaces</wchar>
12-173 Primary vtable for codecvt byname <char, char,="" mbstate="" t=""></char,>

### **Foreword**

This is version 5.0 of the Linux Standard Base Core Specification for PPC64. This specification is one of a series of volumes under the collective title *Linux Standard Base*:

- Common
- Core
- Desktop
- Languages
- Imaging

Note that the Core and Desktop volumes consist of a generic volume augmented by an architecture-specific volume.

### Status of this Document

This is a released specification, version 5.0. Other documents may supersede or augment this specification.

A list of current released Linux Standard Base (LSB) specifications is available at http://refspecs.linuxbase.org (http://refspecs.linuxbase.org/).

If you wish to make comments regarding this document in a manner that is tracked by the LSB project, please submit them using our public bug database at http://bugs.linux-base.org. Please enter your feedback, carefully indicating the title of the section for which you are submitting feedback, and the volume and version of the specification where you found the problem, quoting the incorrect text if appropriate. If you are suggesting a new feature, please indicate what the problem you are trying to solve is. That is more important than the solution, in fact.

If you do not have or wish to create a bug database account then you can also e-mail feedback to <lsb-discuss@lists.linuxfoundation.org> (subscribe (http://lists.linuxfoundation.org/mailman/listinfo/lsb-discuss), archives (http://lists.linuxfoundation.org/pipermail/lsb-discuss/)), and arrangements will be made to transpose the comments to our public bug database.

### Introduction

The LSB defines a binary interface for application programs that are compiled and packaged for LSB-conforming implementations on many different hardware architectures. A binary specification must include information specific to the computer processor architecture for which it is intended. To avoid the complexity of conditional descriptions, the specification has instead been divided into generic parts which are augmented by one of several architecture-specific parts, depending on the target processor architecture; the generic part will indicate when reference must be made to the architecture part, and vice versa.

This document should be used in conjunction with the documents it references. This document enumerates the system components it includes, but descriptions of those components may be included entirely or partly in this document, partly in other documents, or entirely in other reference documents. For example, the section that describes system service routines includes a list of the system routines supported in this interface, formal declarations of the data structures they use that are visible to applications, and a pointer to the underlying referenced specification for information about the syntax and semantics of each call. Only those routines not described in standards referenced by this document, or extensions to those standards, are described in the detail. Information referenced in this way is as much a part of this document as is the information explicitly included here.

The specification carries a version number of either the form x.y or x.y.z. This version number carries the following meaning:

- 1. The first number (x) is the major version number. Versions sharing the same major version number shall be compatible in a backwards direction; that is, a newer version shall be compatible with an older version. Any deletion of a library results in a new major version number. Interfaces marked as deprecated may be removed from the specification at a major version change.
- 2. The second number (y) is the minor version number. Libraries and individual interfaces may be added, but not removed. Interfaces may be marked as deprecated at a minor version change. Other minor changes may be permitted at the discretion of the LSB workgroup.
- 3. The third number (z), if present, is the editorial level. Only editorial changes should be included in such versions.

Since this specification is a descriptive Application Binary Interface, and not a source level API specification, it is not possible to make a guarantee of 100% backward compatibility between major releases. However, it is the intent that those parts of the binary interface that are visible in the source level API will remain backward compatible from version to version, except where a feature marked as "Deprecated" in one release may be removed from a future release. Implementors are strongly encouraged to make use of symbol versioning to permit simultaneous support of applications conforming to different releases of this specification.

LSB is a trademark of the Linux Foundation. Developers of applications or implementations interested in using the trademark should see the Linux Foundation Certification Policy for details.

# I Introductory Elements

### 1 Scope

### 1.1 General

The Linux Standard Base (LSB) defines a system interface for compiled applications and a minimal environment for support of installation scripts. Its purpose is to enable a uniform industry standard environment for high-volume applications conforming to the LSB.

These specifications are composed of two basic parts: a common part describing those parts of the interface that remain constant across all implementations of the LSB, and an architecture-specific part describing the parts of the interface that vary by processor architecture. Together, the common part and the relevant architecture-specific part for a single hardware architecture provide a complete interface specification for compiled application programs on systems that share a common hardware architecture.

The LSB contains both a set of Application Program Interfaces (APIs) and Application Binary Interfaces (ABIs). APIs may appear in the source code of portable applications, while the compiled binary of that application may use the larger set of ABIs. A conforming implementation provides all of the ABIs listed here. The compilation system may replace (e.g. by macro definition) certain APIs with calls to one or more of the underlying binary interfaces, and may insert calls to binary interfaces as needed.

The LSB is primarily a binary interface definition. Not all of the source level APIs available to applications may be contained in this specification.

### 1.2 Module Specific Scope

This is the PPC64 architecture specific part of the Core module of the Linux Standard Base (LSB). This part supplements the common part of the LSB Core module with those interfaces that differ between architectures.

This part should be used in conjunction with LSB Core - Generic, the common part. Whenever a section of the common part is supplemented by architecture-specific information, the common part includes a reference to the architecture-specific part. This part may also contain additional information that is not referenced in the common part.

Interfaces described in this part of the LSB Core Specification are mandatory except where explicitly listed otherwise. Interfaces described in the LSB Core module are supplemented by other LSB modules. All other modules depend on the presence of LSB Core.

### 2 References

#### 2.1 Normative References

The following specifications are incorporated by reference into this specification. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced specification (including any amendments) applies.

**Note:** Where copies of a referenced specification are available on the World Wide Web, a Uniform Resource Locator (URL) is given, for informative purposes only. Such URL might at any given time resolve to a more recent copy of the specification, or be out of date (not resolve). Reference copies of specifications at the revision level indicated may be found at the Linux Foundation's Reference Specifications (http://refspecs.linuxbase.org) site.

### 3 Requirements

#### 3.1 Relevant Libraries

The libraries listed in <u>Table 3-1</u> shall be available on PPC64 Linux Standard Base systems, with the specified runtime names. These names override or supplement the names specified in the generic LSB (LSB Core - Generic) specification. The specified program interpreter, referred to as proginterp in this table, shall be used to load the shared libraries specified by DT\_NEEDED entries at run time.

**Table 3-1 Standard Library Names** 

Library	Runtime Name
libc	libc.so.6
liberypt	libcrypt.so.1
libdl	libdl.so.2
libgcc_s	libgcc_s.so.1
libm	libm.so.6
libncurses	libncurses.so.5
libncursesw	libncursesw.so.5
libpthread	libpthread.so.0
libstdcxx	libstdc++.so.6
libutil	libutil.so.1
libz	libz.so.1
proginterp	/lib64/ld-lsb-ppc64.so.3

These libraries will be in an implementation-defined directory which the dynamic linker shall search by default.

### 3.2 LSB Implementation Conformance

A conforming implementation is necessarily architecture specific, and must provide the interfaces specified by both the generic LSB Core specification (LSB Core - Generic) and the relevant architecture specific part of the LSB Core Specification.

**Rationale:** An implementation must provide *at least* the interfaces specified in these specifications. It may also provide additional interfaces.

A conforming implementation shall satisfy the following requirements:

- A processor architecture represents a family of related processors which may not have identical feature sets. The architecture specific parts of the LSB Core Specification that supplement this specification for a given target processor architecture describe a minimum acceptable processor. The implementation shall provide all features of this processor, whether in hardware or through emulation transparent to the application.
- The implementation shall be capable of executing compiled applications having the format and using the system interfaces described in this specification.
- The implementation shall provide libraries containing the interfaces specified by this
  specification, and shall provide a dynamic linking mechanism that allows these interfaces to be attached to applications at runtime. All the interfaces shall behave as specified in this specification.
- The map of virtual memory provided by the implementation shall conform to the requirements of this specification.

- The implementation's low-level behavior with respect to function call linkage, system traps, signals, and other such activities shall conform to the formats described in this specification.
- The implementation shall provide all of the mandatory interfaces in their entirety.
- The implementation may provide one or more of the optional interfaces. Each optional interface that is provided shall be provided in its entirety. The product documentation shall state which optional interfaces are provided.
- The implementation shall provide all files and utilities specified as part of this specification in the format defined here and in other documents normatively included by reference. All commands and utilities shall behave as required by this specification. The implementation shall also provide all mandatory components of an application's runtime environment that are included or referenced in this specification.
- The implementation, when provided with standard data formats and values at a named interface, shall provide the behavior defined for those values and data formats at that interface. However, a conforming implementation may consist of components which are separately packaged and/or sold. For example, a vendor of a conforming implementation might sell the hardware, operating system, and windowing system as separately packaged items.
- The implementation may provide additional interfaces with different names. It may also provide additional behavior corresponding to data values outside the standard ranges, for standard named interfaces.

### 3.3 LSB Application Conformance

A conforming application containing object files is necessarily architecture specific, and must conform to both the generic LSB Core specification (LSB Core - Generic) and the relevant architecture specific part of the LSB Core Specification. A conforming application which contains no object files may be architecture neutral. Architecture neutral applications shall conform only to the requirements of the generic LSB Core specification (LSB Core - Generic).

A conforming application shall satisfy the following requirements:

- Executable files shall be either object files in the format defined in the Object Format section of this specification, or script files in a scripting language where the interpreter is required by this specification.
- Object files shall participate in dynamic linking as defined in the Program Loading and Linking section of this specification.
- Object files shall employ only the instructions, traps, and other low-level facilities defined as being for use by applications in the Low-Level System Information section of this specification
- If the application requires any optional interface defined in this specification in order to be installed or to execute successfully, the requirement for that optional interface shall be stated in the application's documentation.
- The application shall not use any interface or data format that is not required to be provided by a conforming implementation, unless such an interface or data format is supplied by another application through direct invocation of that application during execution. The other application must also be a conforming application, and the use of such interface or data format, as well as its source (in other words, the other conforming application), shall be identified in the documentation of the application.
- The application shall not use any values for a named interface that are reserved for vendor extensions.

A strictly conforming application shall not require or use any interface, facility, or implementation-defined extension not defined in this specification in order to be installed or to execute successfully.

### 4 Terms and Definitions

For the purposes of this document, the terms given in *ISO/IEC Directives, Part 2, Annex H* and the following apply.

#### archLSB

Some LSB specification documents have both a generic, architecture-neutral part and an architecture-specific part. The latter describes elements whose definitions may be unique to a particular processor architecture. The term archLSB may be used in the generic part to refer to the corresponding section of the architecture-specific part.

#### Binary Standard, ABI

The total set of interfaces that are available to be used in the compiled binary code of a conforming application, including the run-time details such as calling conventions, binary format, C++ name mangling, etc.

#### Implementation-defined

Describes a value or behavior that is not defined by this document but is selected by an implementor. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence of the value or behavior. An application that relies on such a value or behavior cannot be assured to be portable across conforming implementations. The implementor shall document such a value or behavior so that it can be used correctly by an application.

#### Shell Script

A file that is read by an interpreter (e.g., awk). The first line of the shell script includes a reference to its interpreter binary.

#### Source Standard, API

The total set of interfaces that are available to be used in the source code of a conforming application. Due to translations, the Binary Standard and the Source Standard may contain some different interfaces.

#### Undefined

Describes the nature of a value or behavior not defined by this document which results from use of an invalid program construct or invalid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

#### Unspecified

Describes the nature of a value or behavior not specified by this document which results from use of a valid program construct or valid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

In addition, for the portions of this specification which build on IEEE Std 1003.1-2001, the definitions given in *IEEE Std 1003.1-2001*, *Base Definitions*, *Chapter 3* apply.

### **5 Documentation Conventions**

Throughout this document, the following typographic conventions are used:

function()

the name of a function

#### command

the name of a command or utility

CONSTANT

a constant value

parameter

a parameter

variable

a variable

Throughout this specification, several tables of interfaces are presented. Each entry in these tables has the following format:

name

the name of the interface

(symver)

An optional symbol version identifier, if required.

[refno]

A reference number indexing the table of referenced specifications that follows this table.

For example,

forkpty(GLIBC\_2.0) [SUSv4]

refers to the interface named forkpty() with symbol version GLIBC\_2.0 that is defined in the reference indicated by the tag SUSv4.

**Note:** For symbols with versions which differ between architectures, the symbol versions are defined in the architecture specific parts of of this module specification only. In the generic part, they will appear without symbol versions.

# II Executable and Linking Format (ELF)

# **6 Introduction**

Executable and Linking Format (ELF) defines the object format for compiled applications. This specification supplements the information found in <u>System V ABI Update</u> and <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>, and is intended to document additions made since the publication of that document.

### 7 Low Level System Information

#### 7.1 Machine Interface

#### 7.1.1 Processor Architecture

The PowerPC Architecture is specified by the following documents:

- 64-bit PowerPCTM ELF ABI Supplement
- The PowerPC<sup>TM</sup> Microprocessor Family

Only the features of the PowerPC Power3 processor instruction set may be assumed to be present. An application should determine if any additional instruction set features are available before using those additional features. If a feature is not present, then the application may not use it.

Conforming applications may use only instructions which do not require elevated privileges.

Conforming applications shall not invoke the implementations underlying system call interface directly. The interfaces in the implementation base libraries shall be used instead.

**Rationale:** Implementation-supplied base libraries may use the system call interface but applications must not assume any particular operating system or kernel version is present.

An implementation must support the 64-bit computation mode as described in <u>The PowerPC<sup>TM</sup> Microprocessor Family</u>.

Applications conforming to this specification must provide feedback to the user if a feature that is required for correct execution of the application is not present. Applications conforming to this specification should attempt to execute in a diminished capacity if a required feature is not present.

This specification does not provide any performance guarantees of a conforming system. A system conforming to this specification may be implemented in either hardware or software.

## 7.1.2 Data Representation

LSB-conforming applications shall use the data representation as defined in Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

# 7.1.3 Byte Ordering

LSB-conforming applications shall use big-endian byte ordering. LSB-conforming implementations may support little-endian applications.

# 7.1.4 Fundamental Types

LSB-conforming applications shall use the fundamental types as defined in Chapter 3 of the  $\underline{64\text{-bit PowerPC}^{\text{TM}}}$  ELF ABI Supplement.

LSB-conforming applications shall not use the long double fundamental type.

# 7.1.5 Aggregates and Unions

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

#### 7.1.6 Bit Fields

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.2 Function Calling Sequence

LSB-conforming applications shall use the function calling sequence as defined in Chapter 3 of the <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>.

### 7.2.1 Registers

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.2.2 Stack Frame

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.2.3 Parameter Passing

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.2.4 Return Values

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.2.5 Function Descriptors

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

#### 7.3 Traceback Tables

LSB-conforming applications shall use the traceback tables as defined in Chapter 3 of the  $\underline{64\text{-bit PowerPC}^{\text{TM}}}$  ELF ABI Supplement.

### 7.3.1 Mandatory Fields

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

# 7.3.2 Optional Fields

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

#### 7.4 Process Initialization

LSB-conforming applications shall use the Operating System Interfaces as defined in Chapter 3 of the  $\underline{64\text{-bit PowerPC}^{TM}}$  ELF ABI Supplement.

# 7.4.1 Registers

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

#### 7.4.2 Process Stack

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.5 Coding Examples

LSB-conforming applications may implement fundamental operations using the Coding Examples as defined in Chapter 3 of the <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>.

### 7.5.1 Code Model Overview

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

#### 7.5.2 The TOC Section

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.5.3 TOC Assembly Language Syntax

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.5.4 Function Prologue and Epilogue

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.5.5 Register Saving and Restoring Functions

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.5.6 Saving General Registers Only

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

# 7.5.7 Saving General Registers and Floating Point Registers

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.5.8 Saving Floating Point Registers Only

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 7.5.9 Save and Restore Services

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

## 7.5.10 Data Objects

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

#### 7.5.11 Function Calls

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

# 7.5.12 Branching

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

# 7.5.13 Dynamic Stack Space Allocation

See Chapter 3 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 8 Object Format

### 8.1 Introduction

LSB-conforming implementations shall support the Executable and Linking Format (ELF) object file format, as defined by the following documents:

- System V ABI
- System V ABI Update
- 64-bit PowerPCTM ELF ABI Supplement
- LSB Core Generic
- · this document

LSB-conforming implementations need not support tags related functionality. LSB-conforming applications must not rely on tags related functionality.

#### 8.2 ELF Header

LSB-conforming applications shall use the ELF header as defined in <u>64-bit PowerPCTM</u> <u>ELF ABI Supplement</u>, Chapter 4.

### 8.3 Special Sections

The following sections are defined in the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

**Table 8-1 ELF Special Sections** 

Name	Туре	Attributes
.glink	SHT_PROGBITS	SHF_ALLOC+SHF_EX- ECINSTR
.got	SHT_PROGBITS	SHF_ALLOC+SHF_WRI TE
.plt	SHT_NOBITS	SHF_ALLOC+SHF_WRI TE
.sbss	SHT_NOBITS	SHF_ALLOC+SHF_WRI TE
.sdata	SHT_PROGBITS	SHF_ALLOC+SHF_WRI TE
.toc	SHT_PROGBITS	SHF_ALLOC+SHF_WRI TE
.tocbss	SHT_NOBITS	SHF_ALLOC+SHF_WRI TE

.glink

This section may be used to hold the global linkage table which aids the procedure linkage table. See Procedure Linkage Table in Chapter 5 of the processor supplement for more information.

.got

This section may be used to hold the Global Offset Table, or GOT. See The Toc Section and Coding Examples in Chapter 3 and Global Offset Table in Chapter 5 of the processor supplement for more information.

.plt

This section holds the procedure linkage table. See Procedure Linkage Table in

Chapter 5 of the processor supplement for more information.

.sbss

This section holds uninitialized data that contribute to the program's memory image. The system initializes the data with zeroes when the program begins to run.

.sdata

This section holds initialized small data that contribute to the program memory image.

.toc

This section may be used to hold the initialized Table of Contents, or TOC.

.tocbss

This section may be used to hold the uninitialized portions of the TOC. This data may also be stored as zero-initialized data in a .toc section.

### 8.3.1 Additional Special Sections

The following additional sections are defined here.

**Table 8-2 Additional Special Sections** 

Name	Туре	Attributes
.branch_lt	SHT_PROGBITS	SHF_ALLOC+SHF_WRI TE
.opd	SHT_PROGBITS	SHF_ALLOC+SHF_WRI TE
.rela.dyn	SHT_RELA	SHF_ALLOC
.rela.plt	SHT_RELA	SHF_ALLOC
.toc1	SHT_PROGBITS	SHF_ALLOC+SHF_WRI TE

#### .branch\_lt

This section holds destination addresses for very long branches.

.opd

This section contains the official procedure descriptors. A pointer to a function shall reference a procedure descriptor in this section.

.rela.dyn

This section holds RELA type relocation information for all sections of a shared library except the PLT.

.rela.plt

This section holds RELA type relocation information for the PLT section of a shared library or dynamically linked application.

.toc

This section holds the second level TOC information.

#### 8.4 TOC

LSB-conforming applications shall use the Table of Contents (TOC) as defined in <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>, Chapter 4.

# 8.5 Symbol Table

LSB-conforming applications shall use the Symbol Table as defined in Chapter 4 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

# 8.5.1 Symbol Values

See Chapter 4 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

### 8.6 Relocation

LSB-conforming applications shall use Relocations as defined in Chapter 4 of the <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>.

# 8.6.1 Relocation Types

See Chapter 4 of the 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement.

# 9 Program Loading and Dynamic Linking

#### 9.1 Introduction

LSB-conforming implementations shall support the object file information and system actions that create running programs as specified in the <u>System V ABI</u>, <u>64-bit PowerPCTM ELF ABI Supplement</u> and as supplemented by the Linux Standard Base Specification and this document.

### 9.2 Program Loading

See <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>, Chapter 5.1.

### 9.3 Dynamic Linking

See 64-bit PowerPC<sup>TM</sup> ELF ABI Supplement, Chapter 5.2.

### 9.3.1 Dynamic Section

The following dynamic entries are defined in the <u>64-bit PowerPCTM ELF ABI</u> <u>Supplement</u>, Chapter 5.2.

DT\_JMPREL

This entry is associated with a table of relocation entries for the procedure linkage table. This entry is mandatory both for executable and shared object files

DT PLTGOT

This entry's d\_ptr member gives the address of the first byte in the procedure linkage table

In addition the following dynamic entries are also supported:

DT RELACOUNT

The number of relative relocations in .rela.dyn

### 9.3.2 Global Offset Table

See <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>, Chapter 5.2.2.

#### 9.3.3 Function Addresses

See <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>, Chapter 5.2.3.

### 9.3.4 Procedure Linkage Table

See <u>64-bit PowerPC<sup>TM</sup> ELF ABI Supplement</u>, Chapter 5.2.4.

# **III Base Libraries**

### 10 Libraries

An LSB-conforming implementation shall support base libraries which provide interfaces for accessing the operating system, processor and other hardware in the system.

Only interfaces and interface details which are unique to the PPC64 platform are defined here. This section should be used in conjunction with the corresponding section of LSB Core - Generic.

### 10.1 Program Interpreter/Dynamic Linker

The Program Interpreter shall be /lib64/ld-lsb-ppc64.so.3.

#### 10.2 Interfaces for libc

Table 10-1 defines the library name and shared object name for the libc library

#### **Table 10-1 libc Definition**

Library:	libc
SONAME:	libc.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LFS] Large File Support

[LSB] LSB Core - Generic

[RPC + XDR] <u>RFC 5531/4506 RPC & XDR</u>

[SUSv2] SUSv2

[SUSv3] POSIX 1003.1-2001 (ISO/IEC 9945-2003)

[SUSv4] POSIX 1003.1-2008 (ISO/IEC 9945-2009)

[SVID.4] SVID Issue 4

#### 10.2.1 RPC

#### 10.2.1.1 Interfaces for RPC

An LSB conforming implementation shall provide the architecture specific functions for RPC specified in <u>Table 10-2</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Table 10-2 libc - RPC Function Interfaces** 

authnone_create( GLIBC_2.3) [SVID.4]	callrpc(GLIBC_2. 3) [RPC + XDR]	clnt_create(GLIB C_2.3) [SVID.4]	clnt_pcreateerror( GLIBC_2.3) [SVID.4]
clnt_perrno(GLIB C_2.3) [SVID.4]	clnt_perror(GLIB C_2.3) [SVID.4]	clnt_spcreateerror( GLIBC_2.3) [SVID.4]	clnt_sperrno(GLI BC_2.3) [SVID.4]
clnt_sperror(GLIB C_2.3) [SVID.4]	clntraw_create(GL IBC_2.3) [RPC + XDR]	clnttcp_create(GL IBC_2.3) [RPC + XDR]	clntudp_bufcreate( GLIBC_2.3) [RPC_ + XDR]
clntudp_create(GL IBC_2.3) [RPC + XDR]	key_decryptsessio n(GLIBC_2.3) [SVID.4]	pmap_getport(GLI BC_2.3) [LSB]	pmap_set(GLIBC _2.3) [LSB]
pmap_unset(GLIB C_2.3) [LSB]	svc_getreqset(GLI BC_2.3) [SVID.4]	svc_register(GLIB C_2.3) [LSB]	svc_run(GLIBC_2 .3) [LSB]

xdr_accepted_repl y(GLIBC_2.3) [SVID.4]	xdr_array(GLIBC _2.3) [SVID.4]	xdr_bool(GLIBC_ 2.3) [SVID.4]	xdr_bytes(GLIBC _2.3) [SVID.4]
xdr_callhdr(GLIB C_2.3) [SVID.4]	xdr_callmsg(GLI BC_2.3) [SVID.4]	xdr_char(GLIBC_ 2.3) [SVID.4]	xdr_double(GLIB C_2.3) [SVID.4]
xdr_enum(GLIBC _2.3) [SVID.4]	xdr_float(GLIBC_ 2.3) [SVID.4]	xdr_free(GLIBC_ 2.3) [SVID.4]	xdr_int(GLIBC_2. 3) [SVID.4]
xdr_long(GLIBC_ 2.3) [SVID.4]	xdr_opaque(GLIB C_2.3) [SVID.4]	xdr_opaque_auth( GLIBC_2.3) [SVID.4]	xdr_pointer(GLIB C_2.3) [SVID.4]
xdr_reference(GLI BC_2.3) [SVID.4]	xdr_rejected_reply (GLIBC_2.3) [SVID.4]	xdr_replymsg(GLI BC_2.3) [SVID.4]	xdr_short(GLIBC _2.3) [SVID.4]
xdr_string(GLIBC _2.3) [SVID.4]	xdr_u_char(GLIB C_2.3) [SVID.4]	xdr_u_int(GLIBC _2.3) [LSB]	xdr_u_long(GLIB C_2.3) [SVID.4]
xdr_u_short(GLIB C_2.3) [SVID.4]	xdr_union(GLIBC _2.3) [SVID.4]	xdr_vector(GLIB C_2.3) [SVID.4]	xdr_void(GLIBC_ 2.3) [SVID.4]
xdr_wrapstring(G LIBC_2.3) [SVID.4]	xdrmem_create(G LIBC_2.3) [SVID.4]	xdrrec_create(GLI BC_2.3) [SVID.4]	xdrrec_endofrecor d(GLIBC_2.3) [RPC + XDR]
xdrrec_eof(GLIB C_2.3) [SVID.4]	xdrrec_skiprecord (GLIBC_2.3) [RPC + XDR]	xdrstdio_create(G LIBC_2.3) [LSB]	

An LSB conforming implementation shall provide the architecture specific deprecated functions for RPC specified in <u>Table 10-3</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Note:** These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

**Table 10-3 libc - RPC Deprecated Function Interfaces** 

key_decryptsessio		
n(GLIBC_2.3)		
[SVID.4]		

# 10.2.2 Epoll

#### 10.2.2.1 Interfaces for Epoll

No external functions are defined for libc - Epoll in this part of the specification. See also the generic specification.

# 10.2.3 System Calls

### 10.2.3.1 Interfaces for System Calls

An LSB conforming implementation shall provide the architecture specific functions for System Calls specified in <u>Table 10-4</u>, with the full mandatory functionality as described

in the referenced underlying specification.

**Table 10-4 libc - System Calls Function Interfaces** 

fxstat(GLIBC_2 .3) [LSB]	getpgid(GLIBC _2.3) [LSB]	lxstat(GLIBC_2 .3) [LSB]	_xmknod(GLIB C_2.3) [LSB]

setutent(GLIBC_2 .3) [LSB]	setutxent(GLIBC_ 2.3) [SUSv4]	utmpname(GLIBC _2.3) [LSB]	

An LSB conforming implementation shall provide the architecture specific deprecated functions for System Database Interface specified in <u>Table 10-29</u>, with the full mandat-

ory functionality as described in the referenced underlying specification.

**Note:** These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 10-29 libc - System Database Interface Deprecated Function Interfaces

gethostbyaddr(GL IBC_2.3) [SUSv3]	gethostbyaddr_r(G LIBC_2.3) [LSB]	gethostbyname(G LIBC_2.3) [SUSv3]	gethostbyname2( GLIBC_2.3) [LSB]
gethostbyname2_r (GLIBC_2.3) [LSB]	gethostbyname_r( GLIBC_2.3) [LSB]		

## 10.2.18 Language Support

### 10.2.18.1 Interfaces for Language Support

An LSB conforming implementation shall provide the architecture specific functions for Language Support specified in <u>Table 10-30</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Table 10-30 libc - Language Support Function Interfaces** 

libc_start_main(		
GLIBC_2.3)		
[LSB]		

## 10.2.19 Large File Support

### 10.2.19.1 Interfaces for Large File Support

An LSB conforming implementation shall provide the architecture specific functions for Large File Support specified in <u>Table 10-31</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Table 10-31 libc - Large File Support Function Interfaces** 

fxstat64(GLIBC _2.3) [LSB]	lxstat64(GLIBC _2.3) [LSB]	xstat64(GLIBC _2.3) [LSB]	creat64(GLIBC_2. 3) [LFS]

## 10.2.20 Inotify

### 10.2.20.1 Interfaces for Inotify

No external functions are defined for libc - Inotify in this part of the specification. See also the generic specification.

## 10.2.21 Standard Library

### 10.2.21.1 Interfaces for Standard Library

An LSB conforming implementation shall provide the architecture specific functions for Standard Library specified in <u>Table 10-33</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Table 10-33 libc - Standard Library Function Interfaces**

### 10.2.22 GNU Extensions for libc

#### 10.2.22.1 Interfaces for GNU Extensions for libc

An LSB conforming implementation shall provide the architecture specific functions for GNU Extensions for libc specified in <u>Table 10-36</u>, with the full mandatory functionality as described in the referenced underlying specification.

Table 10-36 libc - GNU Extensions for libc Function Interfaces

-	TWO TO TO HOLD OF THE EMPEROUS FOR HOLD THE EMPEROUS EMPEROUS			
	gnu_get_libc_rele	gnu_get_libc_vers		
	ase(GLIBC_2.3)	ion(GLIBC_2.3)		
	[LSB]	[LSB]		

#### 10.3 Data Definitions for libc

This section defines global identifiers and their values that are associated with interfaces contained in libc. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 10.3.1 argz.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

### 10.3.2 assert.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

# 10.3.3 cpio.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

# 10.3.4 ctype.h

```
enum {
    _ISupper = 1,
    _ISlower = 2,
    _ISalpha = 4,
    _ISdigit = 8,
    _ISxdigit = 16,
    _ISspace = 32,
    _ISprint = 64,
    _ISgraph = 128,
    _ISblank = 256,
    _IScntrl = 512,
    _ISpunct = 1024,
    _ISalnum = 2048
};
```

### 10.3.5 dirent.h

```
/*

* This header is architecture neutral

* Please refer to the generic specification for details

*/
```

#### 10.3.6 elf.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

#### 10.3.7 endian.h

```
#define __BYTE_ORDER __BIG_ENDIAN
```

#### 10.3.8 errno.h

#define EDEADLOCK 58

### 10.3.9 fcntl.h

```
#define O_NOFOLLOW 0100000
#define O_LARGEFILE 0200000
#define O_DIRECTORY 040000
#define POSIX_FADV_DONTNEED
#define POSIX_FADV_NOREUSE
#define F_GETLK64 12
#define F_SETLK64 13
#define F_SETLKW64 14
```

# 10.3.10 fmtmsg.h

```
/*

#### 10.4 Interfaces for libm

<u>Table 10-37</u> defines the library name and shared object name for the library

#### **Table 10-37 libm Definition**

Library:	libm
SONAME:	libm.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] <u>LSB Core - Generic</u> [SUSv3] <u>POSIX 1003.1-2001 (ISO/IEC 9945-2003)</u> [SUSv4] <u>POSIX 1003.1-2008 (ISO/IEC 9945-2009)</u>

#### 10.4.1 Math

#### 10.4.1.1 Interfaces for Math

An LSB conforming implementation shall provide the architecture specific functions for Math specified in <u>Table 10-38</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Table 10-38 libm - Math Function Interfaces**

## 10.5 Data Definitions for libm

This section defines global identifiers and their values that are associated with interfaces contained in libm. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 10.5.1 complex.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

## 10.5.2 fenv.h

```
#define FE_TONEAREST 0
#define FE_TOWARDZERO 1
#define FE_UPWARD 2
#define FE_DOWNWARD 3

typedef unsigned int fexcept_t;

typedef double fenv_t;
#define FE_DFL_ENV (&__fe_dfl_env)
```

#### 10.5.3 math.h

```
typedef float float_t;
typedef double double_t;
#define isfinite(x)
(sizeof (x) == sizeof (float) ? __finitef (x) : sizeof (x) == sizeof (double)? __finite (x) : __finitel (x)) /* Return nonzero value if X is not +-Inf or NaN. */
#define fpclassify(x)
  (sizeof (x) == sizeof (float) ? __fpclassifyf (x) :sizeof (x)
= sizeof (double) ? __fpclassify (x) : __fpclassifyl
(x) /* Return number of classification appropriate for X.
(x))
*/
#define isinf(x)
   (size of (x) == size of (float) ? __isnanf (x) : size of (x) ==
sizeof (double) ? __isnan (x) : __isnanl (x))
#define isnan(x)
   (sizeof(x) == sizeof(float)? __isnanf(x) : sizeof(x) ==
sizeof (double) ? __isnan (x) : __isnanl (x))
#define signbit(x)
(sizeof (x) == sizeof (float)? __signbitf (x): sizeof (x) == sizeof (double)? __signbit (x) : __signbitl (x) /* Return
nonzero value if sign of X is negative. */
#define HUGE_VALL
                               0x1.0p2047L
#define FP_ILOGB0
                               -2147483647
#define FP_ILOGBNAN
                               2147483647
extern int __fpclassifyl(long double);
extern int __signbitl(long double);
extern long double exp2l(long double);
```

## 10.6 Interface Definitions for libm

The interfaces defined on the following pages are included in libm and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in <u>Section 10.4</u> shall behave as described in the referenced base document. For interfaces referencing LSB and not listed below, please see the generic part of the specification.

## \_\_fpclassifyl

#### **Name**

\_\_fpclassifyl — Classify real floating type

## **Synopsis**

int \_\_fpclassifyl(long double arg);

## **Description**

\_\_fpclassifyl() has the same specification as fpclassify() in <u>POSIX 1003.1-2008 (ISO/IEC 9945-2009)</u>, except that the argument type for \_\_fpclassifyl() is known to be long double.

\_\_fpclassifyl() is not in the source standard; it is only in the binary standard.

## \_\_signbitl

#### **Name**

\_\_signbitl — test sign of floating point value

## **Synopsis**

```
#include <math.h>
int __signbit1(long double arg);
```

## **Description**

\_\_signbitl() has the same specification as signbit() in <u>POSIX 1003.1-2008</u> (<u>ISO/IEC 9945-2009</u>), except that the argument type for \_\_signbitl() is known to be long double.

\_\_signbitl() is not in the source standard; it is only in the binary standard.

## 10.7 Interfaces for libpthread

Table 10-41 defines the library name and shared object name for the libpthread library

**Table 10-41 libpthread Definition** 

Library:	libpthread
SONAME:	libpthread.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[LFS] Large File Support

[LSB] LSB Core - Generic

[SUSv3] POSIX 1003.1-2001 (ISO/IEC 9945-2003)

[SUSv4] POSIX 1003.1-2008 (ISO/IEC 9945-2009)

## 10.7.1 Realtime Threads

#### 10.7.1.1 Interfaces for Realtime Threads

An LSB conforming implementation shall provide the architecture specific functions for Realtime Threads specified in <u>Table 10-42</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Table 10-42 libpthread - Realtime Threads Function Interfaces** 

pthread_attr_getin	pthread_attr_getsc	pthread_attr_getsc	pthread_attr_setin
heritsched(GLIBC	hedpolicy(GLIBC	ope(GLIBC_2.3)	heritsched(GLIBC

## 10.10 Data Definitions for libgcc\_s

This section defines global identifiers and their values that are associated with interfaces contained in libgcc\_s. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 10.10.1 unwind.h

```
extern _Unwind_Ptr _Unwind_GetDataRelBase(struct _Unwind_Context
*);
extern _Unwind_Ptr _Unwind_GetTextRelBase(struct _Unwind_Context
*);
```

## 10.11 Interface Definitions for libgcc\_s

The interfaces defined on the following pages are included in libgcc\_s and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in <u>Section 10.9</u> shall behave as described in the referenced base document. For interfaces referencing LSB and not listed below, please see the generic part of the specification.

## **Unwind Find FDE**

#### Name

\_Unwind\_Find\_FDE — private C++ error handling method

## **Synopsis**

```
fde * _Unwind_Find_FDE(void * pc, struct dwarf_eh_bases * bases);
```

## **Description**

\_Unwind\_Find\_FDE() looks for the object containing *pc*, then inserts into *bases*.

## \_Unwind\_GetDataRelBase

#### **Name**

\_Unwind\_GetDataRelBase — private IA64 C++ error handling method

## **Synopsis**

\_Unwind\_Ptr \_Unwind\_GetDataRelBase(Struct \_Unwind\_Context \* context);

## **Description**

\_Unwind\_GetDataRelBase() returns the global pointer in register one for context.

## \_Unwind\_GetTextRelBase

#### Name

\_Unwind\_GetTextRelBase — private IA64 C++ error handling method

## **Synopsis**

\_Unwind\_Ptr \_Unwind\_GetTextRelBase(struct \_Unwind\_Context \* context);

## **Description**

\_Unwind\_GetTextRelBase() calls the abort method, then returns.

## 10.12 Interfaces for libdl

Table 10-56 defines the library name and shared object name for the libdl library

#### **Table 10-56 libdl Definition**

Library:	libdl
SONAME:	libdl.so.2

The behavior of the interfaces in this library is specified by the following specifications: [LSB] <u>LSB Core - Generic</u>

[SUSv4] POSIX 1003.1-2008 (ISO/IEC 9945-2009)

## 10.12.1 Dynamic Loader

### 10.12.1.1 Interfaces for Dynamic Loader

An LSB conforming implementation shall provide the architecture specific functions for Dynamic Loader specified in <u>Table 10-57</u>, with the full mandatory functionality as described in the referenced underlying specification.

Table 10-57 libdl - Dynamic Loader Function Interfaces

		,	
dladdr(GLIBC_2. 3) [LSB]	dlclose(GLIBC_2. 3) [SUSv4]	dlerror(GLIBC_2. 3) [SUSv4]	dlopen(GLIBC_2. 3) [LSB]
dlsym(GLIBC_2.3 ) [LSB]	dlvsym(GLIBC_2. 3) [LSB]		

## 10.13 Data Definitions for libdl

This section defines global identifiers and their values that are associated with interfaces contained in libdl. These definitions are organized into groups that correspond to system

headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 10.13.1 dlfcn.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

## 10.14 Interfaces for libcrypt

Table 10-58 defines the library name and shared object name for the library

**Table 10-58 libcrypt Definition** 

Library:	libcrypt
SONAME:	liberypt.so.1

The behavior of the interfaces in this library is specified by the following specifications: [LSB] LSB Core - Generic

[SUSv4] POSIX 1003.1-2008 (ISO/IEC 9945-2009)

## 10.14.1 Encryption

## 10.14.1.1 Interfaces for Encryption

An LSB conforming implementation shall provide the architecture specific functions for Encryption specified in <u>Table 10-59</u>, with the full mandatory functionality as described in the referenced underlying specification.

**Table 10-59 libcrypt - Encryption Function Interfaces** 

crypt(GLIBC_2.3) [SUSv4]	crypt_r(GLIBC_2. 3) [LSB]	encrypt(GLIBC_2. 3) [SUSv4]	encrypt_r(GLIBC _2.3) [LSB]
setkey(GLIBC_2. 3) [SUSv4]	setkey_r(GLIBC_ 2.3) [LSB]		

## 10.15 Data Definitions for libcrypt

This section defines global identifiers and their values that are associated with interfaces contained in libcrypt. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application

developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 10.15.1 crypt.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

## **IV Utility Libraries**

## 11 Libraries

An LSB-conforming implementation shall also support the following utility libraries which are built on top of the interfaces provided by the base libraries. These libraries implement common functionality, and hide additional system dependent information such as file formats and device names.

#### 11.1 Interfaces for libz

Table 11-1 defines the library name and shared object name for the libz library

#### **Table 11-1 libz Definition**

Library:	libz
SONAME:	libz.so.1

## 11.1.1 Compression Library

#### 11.1.1.1 Interfaces for Compression Library

No external functions are defined for libz - Compression Library in this part of the specification. See also the generic specification.

#### 11.2 Data Definitions for libz

This section defines global identifiers and their values that are associated with interfaces contained in libz. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

#### 11.2.1 zconf.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

### 11.2.2 zlib.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

## 11.3 Interfaces for libncurses

<u>Table 11-2</u> defines the library name and shared object name for the library

**Table 11-2 libncurses Definition** 

Library:	libncurses
SONAME:	libncurses.so.5

## 11.3.1 Curses

#### 11.3.1.1 Interfaces for Curses

No external functions are defined for libncurses - Curses in this part of the specification. See also the generic specification.

#### 11.4 Data Definitions for libncurses

This section defines global identifiers and their values that are associated with interfaces contained in libncurses. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 11.4.1 curses.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

### 11.5 Interfaces for libncursesw

<u>Table 11-3</u> defines the library name and shared object name for the librarysesw library

**Table 11-3 libncursesw Definition** 

Library:	libncursesw
SONAME:	libncursesw.so.5

### 11.5.1 Curses Wide

#### 11.5.1.1 Interfaces for Curses Wide

No external functions are defined for libncursesw - Curses Wide in this part of the specification. See also the generic specification.

#### 11.6 Data Definitions for libncursesw

This section defines global identifiers and their values that are associated with interfaces contained in libncursesw. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header

file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the <u>ISO C (1999)</u> C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 11.6.1 ncursesw/curses.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

## 11.6.2 ncursesw/ncurses\_dll.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

## 11.6.3 ncursesw/term.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

## 11.6.4 ncursesw/unctrl.h

```
/*
 * This header is architecture neutral
 * Please refer to the generic specification for details
 */
```

### 11.7 Interfaces for libutil

Table 11-4 defines the library name and shared object name for the libutil library

#### **Table 11-4 libutil Definition**

Library:	libutil
SONAME:	libutil.so.1

The behavior of the interfaces in this library is specified by the following specifications: [LSB] <u>LSB Core - Generic</u>

## 11.7.1 Utility Functions

#### 11.7.1.1 Interfaces for Utility Functions

An LSB conforming implementation shall provide the architecture specific functions for Utility Functions specified in <u>Table 11-5</u>, with the full mandatory functionality as de-

scribed in the referenced underlying specification.

**Table 11-5 libutil - Utility Functions Function Interfaces** 

forkpty(GLIBC_2. 3) [LSB]	login(GLIBC_2.3) [LSB]	login_tty(GLIBC_ 2.3) [LSB]	logout(GLIBC_2. 3) [LSB]
logwtmp(GLIBC_ 2.3) [LSB]	openpty(GLIBC_2 .3) [LSB]		

94

## **V** Base Libraries

## 12 Libraries

An LSB-conforming implementation shall support base libraries which provide interfaces for accessing the operating system, processor and other hardware in the system.

Only those interfaces that are unique to the PowerPC 64 platform are defined here. This section should be used in conjunction with the corresponding section in the Linux Standard Base Specification.

## 12.1 Interfaces for libstdcxx

<u>Table 12-1</u> defines the library name and shared object name for the libstdcxx library

**Table 12-1 libstdcxx Definition** 

Library:	libstdcxx
SONAME:	libstdc++.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] <u>Itanium<sup>TM</sup> C++ ABI</u>

[ISOCXX] ISO/IEC 14882: 2003 C++ Language

[LSB] LSB Core - Generic

## 12.1.1 C++ Runtime Support

### 12.1.1.1 Interfaces for C++ Runtime Support

An LSB conforming implementation shall provide the architecture specific methods for C++ Runtime Support specified in <u>Table 12-2</u>, with the full mandatory functionality as described in the referenced underlying specification.

Table 12-2 libstdcxx - C++ Runtime Support Function Interfaces

	The state of the s	
operator new[](unsigned long)(GLIBCXX_3.4) [ISOCXX]		
	operator new[](unsigned long, nothrow_t const&)(GLIBCXX_3.4) [ISOCXX]	
	operator new(unsigned long)(GLIBCXX_3.4) [ISOCXX]	
	operator new(unsigned long, nothrow_t const&)(GLIBCXX_3.4) [ISOCXX]	

## 12.1.2 C++ type descriptors for built-in types

#### 12.1.2.1 Interfaces for C++ type descriptors for built-in types

No external methods are defined for libstdcxx - C++ type descriptors for built-in types in this part of the specification. See also the generic specification.

## 12.1.3 C++ \_Rb\_tree

### 12.1.3.1 Interfaces for C++ \_Rb\_tree

No external methods are defined for libstdcxx - C++ \_Rb\_tree in this part of the specification. See also the generic specification.

## 12.1.4 Class type\_info

#### 12.1.4.1 Class data for type\_info

The virtual table for the std::type\_info class is described in the generic part of this specification.

The Run Time Type Information for the std::type\_info class is described by <u>Table 12-3</u>

Table 12-3 typeinfo for type\_info

Base Vtable	vtable forcxxabiv1::class_type_info
Name	typeinfo name for type_info

## 12.1.4.2 Interfaces for Class type\_info

No external methods are defined for libstdcxx - Class std::type\_info in this part of the specification. See also the generic specification.

## 12.1.5 Class \_\_cxxabiv1::\_\_enum\_type\_info

## 12.1.5.1 Class data for \_\_cxxabiv1::\_\_enum\_type\_info

The virtual table for the \_\_cxxabiv1::\_\_enum\_type\_info class is described in the generic part of this specification.

The Run Time Type Information for the \_\_cxxabiv1::\_\_enum\_type\_info class is described by <u>Table 12-4</u>

Table 12-4 typeinfo for \_\_cxxabiv1::\_\_enum\_type\_info

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for cxxabiv1::enum_type_info

## 12.1.5.2 Interfaces for Class \_\_cxxabiv1::\_\_enum\_type\_info

No external methods are defined for libstdcxx - Class \_\_cxxabiv1::\_\_enum\_type\_info in this part of the specification. See also the generic specification.

## 12.1.6 Class \_\_cxxabiv1::\_\_array\_type\_info

## 12.1.6.1 Class data for \_\_cxxabiv1::\_\_array\_type\_info

The virtual table for the \_\_cxxabiv1::\_\_array\_type\_info class is described in the generic part of this specification.

The Run Time Type Information for the \_\_cxxabiv1::\_\_array\_type\_info class is described by Table 12-5

Table 12-5 typeinfo for cxxabiv1:: array type info

	V = VI =
Base Vtable	vtable for cxxabiv1::si_class_type_info
Name	typeinfo name forcxxabiv1::array_type_info

### 12.1.6.2 Interfaces for Class \_\_cxxabiv1::\_\_array\_type\_info

No external methods are defined for libstdcxx - Class \_\_cxxabiv1::\_array\_type\_info in this part of the specification. See also the generic specification.

## 12.1.7 Class \_\_cxxabiv1::\_\_class\_type\_info

## 12.1.7.1 Class data for \_\_cxxabiv1::\_\_class\_type\_info

The virtual table for the \_\_cxxabiv1::\_\_class\_type\_info class is described by <u>Table 12-6</u>

#### 12.1.19.2 Interfaces for Class

## \_\_gnu\_cxx::stdio\_sync\_filebuf<wchar\_t, char\_traits<wchar\_t> >

No external methods are defined for libstdcxx - Class \_\_gnu\_cxx::stdio\_sync\_filebuf<wchar\_t, std::char\_traits<wchar\_t> > in this part of the specification. See also the generic specification.

## 12.1.20 Class exception

### 12.1.20.1 Class data for exception

The virtual table for the std::exception class is described in the generic part of this specification.

The Run Time Type Information for the std::exception class is described by Table 12-23

Table 12-23 typeinfo for exception

Base Vtable	vtable for cxxabiv1::class_type_info
Name	typeinfo name for exception

#### 12.1.20.2 Interfaces for Class exception

No external methods are defined for libstdcxx - Class std::exception in this part of the specification. See also the generic specification.

## 12.1.21 Class bad\_typeid

## 12.1.21.1 Class data for bad\_typeid

The virtual table for the std::bad\_typeid class is described in the generic part of this specification.

The Run Time Type Information for the std::bad\_typeid class is described by <u>Table 12-24</u>

Table 12-24 typeinfo for bad\_typeid

31 · · · · · · · · · · · · · · · · · · ·	
Base Vtable	vtable for cxxabiv1::si_class_type_info
Name	typeinfo name for bad_typeid

## 12.1.21.2 Interfaces for Class bad\_typeid

No external methods are defined for libstdcxx - Class std::bad\_typeid in this part of the specification. See also the generic specification.

## 12.1.22 Class logic\_error

### 12.1.22.1 Class data for logic\_error

The virtual table for the std::logic\_error class is described in the generic part of this specification.

The Run Time Type Information for the std::logic\_error class is described by <u>Table 12-</u>25

Table 12-25 typeinfo for logic\_error

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for logic_error

## 12.1.22.2 Interfaces for Class logic\_error

No external methods are defined for libstdcxx - Class std::logic\_error in this part of the specification. See also the generic specification.

## 12.1.23 Class range\_error

## 12.1.23.1 Class data for range\_error

The virtual table for the std::range\_error class is described in the generic part of this specification.

The Run Time Type Information for the std::range\_error class is described by <u>Table 12-</u>26

Table 12-26 typeinfo for range\_error

Base Vtable	vtable for cxxabiv1::si_class_type_info
Name	typeinfo name for range_error

### 12.1.23.2 Interfaces for Class range\_error

No external methods are defined for libstdcxx - Class std::range\_error in this part of the specification. See also the generic specification.

## 12.1.24 Class domain\_error

#### 12.1.24.1 Class data for domain\_error

The virtual table for the std::domain\_error class is described in the generic part of this specification.

The Run Time Type Information for the std::domain\_error class is described by <u>Table</u> 12-27

Table 12-27 typeinfo for domain\_error

Base Vtable	vtable for cxxabiv1::si_class_type_info
Name	typeinfo name for domain_error

#### 12.1.24.2 Interfaces for Class domain\_error

No external methods are defined for libstdcxx - Class std::domain\_error in this part of the specification. See also the generic specification.

## 12.1.25 Class length\_error

#### 12.1.25.1 Class data for length\_error

The virtual table for the std::length\_error class is described in the generic part of this specification.

The Run Time Type Information for the std::length\_error class is described by <u>Table 12-</u>28

Table 12-28 typeinfo for length\_error

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for length_error

## 12.1.25.2 Interfaces for Class length\_error

No external methods are defined for libstdcxx - Class std::length\_error in this part of the specification. See also the generic specification.

## 12.1.26 Class out\_of\_range

## 12.1.26.1 Class data for out\_of\_range

The virtual table for the std::out\_of\_range class is described in the generic part of this specification.

The Run Time Type Information for the std::out\_of\_range class is described by <u>Table</u> 12-29

Table 12-29 typeinfo for out\_of\_range

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for out_of_range

#### 12.1.26.2 Interfaces for Class out\_of\_range

No external methods are defined for libstdcxx - Class std::out\_of\_range in this part of the specification. See also the generic specification.

## 12.1.27 Class bad\_exception

#### 12.1.27.1 Class data for bad\_exception

The virtual table for the std::bad\_exception class is described in the generic part of this specification.

The Run Time Type Information for the std::bad\_exception class is described by  $\underline{\text{Table}}$   $\underline{12\text{-}30}$ 

Table 12-30 typeinfo for bad\_exception

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for bad_exception

#### 12.1.27.2 Interfaces for Class bad\_exception

No external methods are defined for libstdcxx - Class std::bad\_exception in this part of the specification. See also the generic specification.

### 12.1.28 Class runtime\_error

#### 12.1.28.1 Class data for runtime\_error

The virtual table for the std::runtime\_error class is described in the generic part of this specification.

The Run Time Type Information for the std::runtime\_error class is described by <u>Table 12-31</u>

Table 12-31 typeinfo for runtime\_error

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for runtime_error

#### 12.1.28.2 Interfaces for Class runtime\_error

No external methods are defined for libstdcxx - Class std::runtime\_error in this part of the specification. See also the generic specification.

### 12.1.29 Class overflow\_error

### 12.1.29.1 Class data for overflow\_error

The virtual table for the std::overflow\_error class is described in the generic part of this specification.

The Run Time Type Information for the std::overflow\_error class is described by <u>Table</u> 12-32

Table 12-32 typeinfo for overflow\_error

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for overflow_error

#### 12.1.29.2 Interfaces for Class overflow\_error

No external methods are defined for libstdcxx - Class std::overflow\_error in this part of the specification. See also the generic specification.

### 12.1.30 Class underflow\_error

#### 12.1.30.1 Class data for underflow\_error

The virtual table for the std::underflow\_error class is described in the generic part of this specification.

The Run Time Type Information for the std::underflow\_error class is described by Table 12-33

Table 12-33 typeinfo for underflow\_error

Base Vtable	vtable for cxxabiv1::si_class_type_info
Name	typeinfo name for underflow_error

#### 12.1.30.2 Interfaces for Class underflow error

No external methods are defined for libstdcxx - Class std::underflow\_error in this part of the specification. See also the generic specification.

### 12.1.31 Class invalid\_argument

#### 12.1.31.1 Class data for invalid\_argument

The virtual table for the std::invalid\_argument class is described in the generic part of this specification.

The Run Time Type Information for the std::invalid\_argument class is described by Table 12-34

Table 12-34 typeinfo for invalid\_argument

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for invalid_argument

#### 12.1.31.2 Interfaces for Class invalid\_argument

No external methods are defined for libstdcxx - Class std::invalid\_argument in this part of the specification. See also the generic specification.

### 12.1.32 Class bad\_cast

### 12.1.32.1 Class data for bad\_cast

The virtual table for the std::bad\_cast class is described in the generic part of this specification.

The Run Time Type Information for the std::bad\_cast class is described by Table 12-35

Table 12-35 typeinfo for bad\_cast

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for bad_cast

#### 12.1.32.2 Interfaces for Class bad\_cast

No external methods are defined for libstdcxx - Class std::bad\_cast in this part of the specification. See also the generic specification.

### 12.1.33 Class bad\_alloc

#### 12.1.33.1 Class data for bad\_alloc

The virtual table for the std::bad\_alloc class is described in the generic part of this specification.

The Run Time Type Information for the std::bad\_alloc class is described by Table 12-36

Table 12-36 typeinfo for bad\_alloc

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for bad_alloc

#### 12.1.33.2 Interfaces for Class bad\_alloc

No external methods are defined for libstdcxx - Class std::bad\_alloc in this part of the specification. See also the generic specification.

### 12.1.34 struct numeric limits base

#### 12.1.34.1 Interfaces for struct \_\_numeric\_limits\_base

No external methods are defined for libstdcxx - struct \_\_numeric\_limits\_base in this part of the specification. See also the generic specification.

### 12.1.35 struct numeric\_limits<long double>

#### 12.1.35.1 Interfaces for struct numeric\_limits<long double>

No external methods are defined for libstdcxx - struct numeric\_limits<long double> in this part of the specification. See also the generic specification.

### 12.1.36 struct numeric\_limits<long long>

#### 12.1.36.1 Interfaces for struct numeric\_limits<long long>

No external methods are defined for libstdcxx - struct numeric\_limits<long long> in this part of the specification. See also the generic specification.

### 12.1.37 struct numeric\_limits<unsigned long long>

#### 12.1.37.1 Interfaces for struct numeric\_limits<unsigned long long>

No external methods are defined for libstdcxx - struct numeric\_limits<unsigned long long> in this part of the specification. See also the generic specification.

### 12.1.38 struct numeric\_limits<float>

#### 12.1.38.1 Interfaces for struct numeric\_limits<float>

No external methods are defined for libstdcxx - struct numeric\_limits<float> in this part of the specification. See also the generic specification.

### 12.1.39 struct numeric\_limits<double>

#### 12.1.39.1 Interfaces for struct numeric limits<double>

No external methods are defined for libstdcxx - struct numeric\_limits<double> in this part of the specification. See also the generic specification.

### 12.1.40 struct numeric\_limits<short>

#### 12.1.40.1 Interfaces for struct numeric\_limits<short>

No external methods are defined for libstdcxx - struct numeric\_limits<short> in this part of the specification. See also the generic specification.

### 12.1.41 struct numeric\_limits<unsigned short>

#### 12.1.41.1 Interfaces for struct numeric limits<unsigned short>

No external methods are defined for libstdcxx - struct numeric\_limits<unsigned short> in this part of the specification. See also the generic specification.

### 12.1.42 struct numeric\_limits<int>

#### 12.1.42.1 Interfaces for struct numeric limits<int>

No external methods are defined for libstdcxx - struct numeric\_limits<int> in this part

of the specification. See also the generic specification.

### 12.1.43 struct numeric\_limits<unsigned int>

#### 12.1.43.1 Interfaces for struct numeric\_limits<unsigned int>

No external methods are defined for libstdcxx - struct numeric\_limits<unsigned int> in this part of the specification. See also the generic specification.

### 12.1.44 struct numeric\_limits<long>

#### 12.1.44.1 Interfaces for struct numeric\_limits<long>

No external methods are defined for libstdcxx - struct numeric\_limits<long> in this part of the specification. See also the generic specification.

### 12.1.45 struct numeric\_limits<unsigned long>

#### 12.1.45.1 Interfaces for struct numeric\_limits<unsigned long>

No external methods are defined for libstdcxx - struct numeric\_limits<unsigned long> in this part of the specification. See also the generic specification.

### 12.1.46 struct numeric\_limits<wchar\_t>

#### 12.1.46.1 Interfaces for struct numeric\_limits<wchar\_t>

No external methods are defined for libstdcxx - struct numeric\_limits<wchar\_t> in this part of the specification. See also the generic specification.

### 12.1.47 struct numeric\_limits<unsigned char>

#### 12.1.47.1 Interfaces for struct numeric\_limits<unsigned char>

No external methods are defined for libstdcxx - struct numeric\_limits<unsigned char> in this part of the specification. See also the generic specification.

### 12.1.48 struct numeric\_limits<signed char>

#### 12.1.48.1 Interfaces for struct numeric\_limits<signed char>

No external methods are defined for libstdcxx - struct numeric\_limits<signed char> in this part of the specification. See also the generic specification.

### 12.1.49 struct numeric\_limits<char>

#### 12.1.49.1 Interfaces for struct numeric\_limits<char>

No external methods are defined for libstdcxx - struct numeric\_limits<char> in this part of the specification. See also the generic specification.

### 12.1.50 struct numeric\_limits<bool>

#### 12.1.50.1 Interfaces for struct numeric\_limits<bool>

No external methods are defined for libstdcxx - struct numeric\_limits<bool> in this part of the specification. See also the generic specification.

### 12.1.51 struct numeric\_limits<\_\_float128>

### 12.1.51.1 Interfaces for struct numeric\_limits<\_\_float128>

No external methods are defined for libstdcxx - struct numeric\_limits<\_\_float128> in this part of the specification. See also the generic specification.

An LSB conforming implementation shall provide the architecture specific data interfaces for struct numeric\_limits<\_\_float128> specified in <u>Table 12-37</u>, with the full mandatory functionality as described in the referenced underlying specification.

Table 12-37 libstdcxx - struct numeric limits< float128> Data Interfaces

### 12.1.52 Class ctype\_base

#### 12.1.52.1 Class data for ctype\_base

The Run Time Type Information for the std::ctype\_base class is described by  $\underline{\text{Table } 12-38}$ 

Table 12-38 typeinfo for ctype\_base

Base Vtable	vtable forcxxabiv1::class_type_info
Name	typeinfo name for ctype_base

#### 12.1.52.2 Interfaces for Class ctype\_base

No external methods are defined for libstdcxx - Class std::ctype\_base in this part of the specification. See also the generic specification.

### 12.1.53 Class \_\_ctype\_abstract\_base<char>

#### 12.1.53.1 Class data for \_\_ctype\_abstract\_base<char>

The virtual table for the std::\_\_ctype\_abstract\_base<char> class is described in the generic part of this specification.

#### 12.1.53.2 Interfaces for Class \_\_ctype\_abstract\_base<char>

No external methods are defined for libstdcxx - Class std::\_\_ctype\_abstract\_base<char> in this part of the specification. See also the generic specification.

### 12.1.54 Class \_\_ctype\_abstract\_base<wchar\_t>

#### 12.1.54.1 Class data for \_\_ctype\_abstract\_base<wchar\_t>

The virtual table for the std::\_\_ctype\_abstract\_base<wchar\_t> class is described in the generic part of this specification.

#### 12.1.54.2 Interfaces for Class \_\_ctype\_abstract\_base<wchar\_t>

No external methods are defined for libstdcxx - Class std::\_\_ctype\_abstract\_base<wchar\_t> in this part of the specification. See also the generic specification.

### 12.1.55 Class ctype<char>

#### 12.1.55.1 Class data for ctype<char>

The virtual table for the std::ctype<char> class is described in the generic part of this specification.

#### 12.1.55.2 Interfaces for Class ctype<char>

An LSB conforming implementation shall provide the architecture specific methods for Class std::ctype<char> specified in <u>Table 12-39</u>, with the full mandatory functionality as described in the referenced underlying specification.

Table 12-39 libstdcxx - Class ctype<char> Function Interfaces

ctype <char>::ctype(locale_struct*, unsigned short const*, bool, unsigned long) (GLIBCXX_3.4) [ISOCXX]</char>	
ctype <char>::ctype(unsigned short const*, bool, unsigned long)(GLIBCXX_3.4) [ISOCXX]</char>	
ctype <char>::ctype(locale_struct*, unsigned short const*, bool, unsigned long) (GLIBCXX_3.4) [ISOCXX]</char>

### 12.1.56 Class ctype<wchar\_t>

#### 12.1.56.1 Class data for ctype<wchar\_t>

The virtual table for the std::ctype<wchar\_t> class is described in the generic part of this specification.

The Run Time Type Information for the std::ctype<wchar\_t> class is described by <u>Table</u> 12-40

Table 12-40 typeinfo for ctype<wchar\_t>

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for ctype <wchar_t></wchar_t>

#### 12.1.56.2 Interfaces for Class ctype<wchar\_t>

An LSB conforming implementation shall provide the architecture specific methods for Class std::ctype<wchar\_t> specified in <u>Table 12-41</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-41 libstdcxx - Class ctype<wchar\_t> Function Interfaces

ctype <wchar_t>::ctype(locale_struct*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</wchar_t>	
ctype <wchar_t>::ctype(unsigned long)(GLIBCXX_3.4) [ISOCXX]</wchar_t>	
ctype <wchar_t>::ctype(locale_struct*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</wchar_t>	
ctype <wchar_t>::ctype(unsigned long)(GLIBCXX_3.4) [ISOCXX]</wchar_t>	

### 12.1.57 Class ctype\_byname<char>

#### 12.1.57.1 Class data for ctype\_byname<char>

The virtual table for the std::ctype\_byname<char> class is described in the generic part of this specification.

The Run Time Type Information for the std::ctype\_byname<char> class is described by <u>Table 12-42</u>

Table 12-42 typeinfo for ctype\_byname<char>

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for ctype_byname <char></char>

#### 12.1.57.2 Interfaces for Class ctype\_byname<char>

An LSB conforming implementation shall provide the architecture specific methods for Class std::ctype\_byname<char> specified in <u>Table 12-43</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-43 libstdcxx - Class ctype\_byname<char> Function Interfaces

ctype_byname <char>::ctype_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</char>
ctype_byname <char>::ctype_byname(char const*, unsigned long)(GLIBCXX_3.4) [ISOCXX]</char>

### 12.1.58 Class ctype\_byname<wchar\_t>

#### 12.1.58.1 Class data for ctype\_byname<wchar\_t>

The virtual table for the std::ctype\_byname<wchar\_t> class is described in the generic part of this specification.

The Run Time Type Information for the std::ctype\_byname<wchar\_t> class is described by <u>Table 12-44</u>

Table 12-44 typeinfo for ctype\_byname<wchar\_t>

Base Vtable	vtable forcxxabiv1::si_class_type_info
Name	typeinfo name for ctype_byname <wchar_t></wchar_t>

#### 12.1.58.2 Interfaces for Class ctype\_byname<wchar\_t>

An LSB conforming implementation shall provide the architecture specific methods for Class std::ctype\_byname<wchar\_t> specified in <u>Table 12-45</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-45 libstdcxx - Class ctype\_byname<wchar\_t> Function Interfaces

ctype_byname <wchar_t>::ctype_byname(char const*, unsigned long) (GLIBCXX_3.4) [ISOCXX]</wchar_t>	
ctype_byname <wchar_t>::ctype_byname(char const*, unsigned long) (GLIBCXX_3.4) [ISOCXX]</wchar_t>	

# 12.1.59 Class basic\_string<char, char\_traits<char>, allocator<char> >

### 12.1.143.1 Class data for gslice

12.1.143 Class gslice

#### 12.1.143.2 Interfaces for Class gslice

An LSB conforming implementation shall provide the architecture specific methods for Class std::gslice specified in <u>Table 12-242</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-242 libstdcxx - Class gslice Function Interfaces

char\_traits<char>>>(GLIBCXX\_LDBL\_3.4) [CXXABI-1.86]

vtable for \_\_gnu\_cxx\_ldbl128::money\_put<char, ostreambuf\_iterator<char,

gslice::\_Indexer::\_Indexer(unsigned long, valarray<unsigned long> const&, valarray<unsigned long> const&)(GLIBCXX\_3.4) [ISOCXX]

gslice::\_Indexer::\_Indexer(unsigned long, valarray<unsigned long> const&, valarray<unsigned long> const&)(GLIBCXX\_3.4) [ISOCXX]

### 12.1.144 Class \_\_basic\_file<char>

#### 12.1.144.1 Class data for \_\_basic\_file<char>

#### 12.1.144.2 Interfaces for Class basic file<char>

An LSB conforming implementation shall provide the architecture specific methods for Class std::\_basic\_file<char> specified in <u>Table 12-243</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-243 libstdcxx - Class \_\_basic\_file<char> Function Interfaces

basic_file <char>::xsgetn(char*, long)(GLIBCXX_3.4) [ISOCXX]</char>
basic_file <char>::xsputn(char const*, long)(GLIBCXX_3.4) [ISOCXX]</char>
basic_file <char>::seekoff(long, _Ios_Seekdir)(GLIBCXX_3.4) [ISOCXX]</char>
basic_file <char>::xsputn_2(char const*, long, char const*, long)(GLIBCXX_3.4) [ISOCXX]</char>

### 12.1.145 Class \_List\_node\_base

#### 12.1.145.1 Interfaces for Class List node base

No external methods are defined for libstdcxx - Class std::\_List\_node\_base in this part of the specification. See also the generic specification.

### 12.1.146 Class valarray<unsigned int>

#### 12.1.146.1 Class data for valarray<unsigned int>

#### 12.1.146.2 Interfaces for Class valarray<unsigned int>

An LSB conforming implementation shall provide the architecture specific methods for Class std::valarray<unsigned int> specified in <u>Table 12-244</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-244 libstdcxx - Class valarray<unsigned int> Function Interfaces

valarray <unsigned long="">::size() const(GLIBCXX_3.4) [ISOCXX]</unsigned>
valarray <unsigned long="">::valarray(valarray<unsigned long=""> const&amp;) (GLIBCXX_3.4) [ISOCXX]</unsigned></unsigned>
valarray <unsigned long="">::valarray(unsigned long)(GLIBCXX_3.4) [ISOCXX]</unsigned>
valarray <unsigned long="">::valarray(valarray<unsigned long=""> const&amp;) (GLIBCXX_3.4) [ISOCXX]</unsigned></unsigned>
valarray <unsigned long="">::valarray(unsigned long)(GLIBCXX_3.4) [ISOCXX]</unsigned>
valarray <unsigned long="">::~valarray()(GLIBCXX_3.4) [ISOCXX]</unsigned>
valarray <unsigned long="">::~valarray()(GLIBCXX_3.4) [ISOCXX]</unsigned>
valarray <unsigned long="">::operator[](unsigned long)(GLIBCXX_3.4) [ISOCXX]</unsigned>

#### 12.1.147 Class allocator<char>

#### 12.1.147.1 Class data for allocator<char>

#### 12.1.147.2 Interfaces for Class allocator<char>

No external methods are defined for libstdcxx - Class std::allocator<char> in this part of the specification. See also the generic specification.

### 12.1.148 Class allocator<wchar\_t>

#### 12.1.148.1 Class data for allocator<wchar t>

#### 12.1.148.2 Interfaces for Class allocator<wchar\_t>

No external methods are defined for libstdcxx - Class std::allocator<wchar\_t> in this part of the specification. See also the generic specification.

### 12.1.149 Class \_\_gnu\_cxx::\_\_pool<true>

### 12.1.149.1 Interfaces for Class \_\_gnu\_cxx::\_\_pool<true>

An LSB conforming implementation shall provide the architecture specific methods for Class \_\_gnu\_cxx::\_pool<true> specified in <u>Table 12-245</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-245 libstdcxx - Class \_\_gnu\_cxx::\_\_pool<true> Function Interfaces

```
__gnu_cxx::__pool<true>::_M_reclaim_block(char*, unsigned long)
(GLIBCXX_3.4.4) [LSB]

__gnu_cxx::__pool<true>::_M_reserve_block(unsigned long, unsigned long)
(GLIBCXX_3.4.4) [LSB]
```

### 12.1.150 Class \_\_gnu\_cxx::\_\_pool<false>

### 12.1.150.1 Interfaces for Class \_\_gnu\_cxx::\_\_pool<false>

An LSB conforming implementation shall provide the architecture specific methods for Class \_\_gnu\_cxx::\_pool<false> specified in <u>Table 12-246</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-246 libstdcxx - Class \_\_gnu\_cxx::\_\_pool<false> Function Interfaces

```
__gnu_cxx::__pool<false>::_M_reclaim_block(char*, unsigned long)
(GLIBCXX_3.4.4) [LSB]
__gnu_cxx::__pool<false>::_M_reserve_block(unsigned long, unsigned long)
(GLIBCXX_3.4.4) [LSB]
```

### 12.1.151 Class \_\_gnu\_cxx::free\_list

#### 12.1.151.1 Interfaces for Class \_\_gnu\_cxx::free\_list

An LSB conforming implementation shall provide the architecture specific methods for Class \_\_gnu\_cxx::free\_list specified in <u>Table 12-247</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-247 libstdcxx - Class \_\_gnu\_cxx::free\_list Function Interfaces

\_gnu\_cxx::free\_list::\_M\_get(unsigned long)(GLIBCXX\_3.4.4) [LSB]

### 12.1.152 Class locale::\_Impl

#### 12.1.152.1 Interfaces for Class locale::\_Impl

An LSB conforming implementation shall provide the architecture specific methods for Class std::locale::\_Impl specified in <u>Table 12-248</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-248 libstdcxx - Class locale::\_Impl Function Interfaces

locale::\_Impl::\_M\_install\_cache(locale::facet const\*, unsigned long) (GLIBCXX\_3.4.7) [ISOCXX]

### 12.1.153 Namespace std Functions

#### 12.1.153.1 Interfaces for Namespace std Functions

An LSB conforming implementation shall provide the architecture specific methods for Namespace std Functions specified in <u>Table 12-249</u>, with the full mandatory functionality as described in the referenced underlying specification.

#### Table 12-249 libstdcxx - Namespace std Functions Function Interfaces

long \_\_copy\_streambufs<char, char\_traits<char> >(basic\_streambuf<char, char\_traits<char> >\*, basic\_streambuf<char, char\_traits<char> >\*)
(GLIBCXX\_3.4.8) [ISOCXX]

long \_\_copy\_streambufs<wchar\_t, char\_traits<wchar\_t>
>(basic\_streambuf<wchar\_t, char\_traits<wchar\_t>>\*, basic\_streambuf<wchar\_t,
char\_traits<wchar\_t>>\*)(GLIBCXX\_3.4.8) [ISOCXX]

### 12.1.154 Class char\_traits<char>

#### 12.1.154.1 Interfaces for Class char traits<char>

No external methods are defined for libstdcxx - Class std::char\_traits<char> in this part of the specification. See also the generic specification.

### 12.1.155 Class char\_traits<wchar\_t>

#### 12.1.155.1 Interfaces for Class char\_traits<wchar\_t>

No external methods are defined for libstdcxx - Class std::char\_traits<wchar\_t> in this part of the specification. See also the generic specification.

#### 12.2 Interface Definitions for libstdcxx

The interfaces defined on the following pages are included in libstdcxx and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in <u>Section 12.1</u> shall behave as described in the referenced base document. For interfaces referencing LSB and not listed below, please see the generic part of the specification.

## **VI Package Format and Installation**

### 13 Software Installation

### 13.1 Package Dependencies

The LSB runtime environment shall provde the following dependencies.

lsb-core-ppc64

This dependency is used to indicate that the application is dependent on features contained in the LSB-Core specification.

This dependency shall have a version of 5.0.

Other LSB modules may add additional dependencies; such dependencies shall have the format lsb-module-ppc64.

### 13.2 Package Architecture Considerations

All packages must specify an architecture of ppc64. A LSB runtime environment must accept an architecture of ppc64 even if the native architecture is different.

The archnum value in the Lead Section shall be 0x0010.

### **Annex A Alphabetical Listing of Interfaces by Library**

### A.1 libc

The behavior of the interfaces in this library is specified by the following Standards.

<u>Large File Support</u> [LFS]

LSB Core - Generic [LSB]

<u>RFC 5531/4506 RPC & XDR</u> [RPC + XDR]

SUSv2 [SUSv2]

POSIX 1003.1-2001 (ISO/IEC 9945-2003) [SUSv3]

POSIX 1003.1-2008 (ISO/IEC 9945-2009) [SUSv4]

SVID Issue 4 [SVID.4]

### **Table A-1 libc Function Interfaces**

# Annex B GNU Free Documentation License (Informative)

This specification is published under the terms of the GNU Free Documentation License, Version 1.1, March 2000

Copyright (C) 2000 Free Software Foundation, Inc. 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

## **B.1 PREAMBLE**

The purpose of this License is to make a manual, textbook, or other written document "free" in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondarily, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

## **B.2 APPLICABILITY AND DEFINITIONS**

This License applies to any manual or other work that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. The "Document", below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as "you".

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (For example, if the Document is in part a text-book of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, whose contents can be viewed and edited directly and straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup has been designed to thwart or discourage subsequent modification by readers is not Transparent. A copy that is not "Transparent"

is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML designed for human modification. Opaque formats include PostScript, PDF, proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

### **B.3 VERBATIM COPYING**

You may copy and distribute the Document in any medium, either commercially or non-commercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

## **B.4 COPYING IN QUANTITY**

If you publish printed copies of the Document numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a publicly-accessible computer-network location containing a complete Transparent copy of the Document, free of added material, which the general network-using public has access to download anonymously at no charge using public-standard network protocols. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

### **B.5 MODIFICATIONS**

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
- B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has less than five).
- C. State on the Title page the name of the publisher of the Modified Version, as the publisher.
- D. Preserve all the copyright notices of the Document.
- E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- H. Include an unaltered copy of this License.
- I. Preserve the section entitled "History", and its title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
- J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.
- K. In any section entitled "Acknowledgements" or "Dedications", preserve the section's title, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.
- L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.
- M. Delete any section entitled "Endorsements". Such a section may not be included in the Modified Version.
- N. Do not retitle any existing section as "Endorsements" or to conflict in title with any Invariant Section.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These

titles must be distinct from any other section titles.

You may add a section entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties--for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

# **B.6 COMBINING DOCUMENTS**

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work

In the combination, you must combine any sections entitled "History" in the various original documents, forming one section entitled "History"; likewise combine any sections entitled "Acknowledgements", and any sections entitled "Dedications". You must delete all sections entitled "Endorsements."

## **B.7 COLLECTIONS OF DOCUMENTS**

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

## **B.8 AGGREGATION WITH INDEPENDENT WORKS**

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, does not as a whole count as a Modified Version of the Document, provided no compilation copyright is claimed for the compilation. Such a compilation is called an "aggregate", and this License does not apply to the other self-contained works thus compiled with the Document, on account of their being thus compiled, if they are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one quarter of the entire aggregate, the Document's Cover Texts may be placed on covers that surround only the Document within the aggregate. Otherwise they must appear on covers around the whole aggregate.

### **B.9 TRANSLATION**

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License provided that you also include the original English version of this License. In case of a disagreement between the translation and the original English version of this License, the original English version will prevail.

### **B.10 TERMINATION**

You may not copy, modify, sublicense, or distribute the Document except as expressly provided for under this License. Any other attempt to copy, modify, sublicense or distribute the Document is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

## **B.11 FUTURE REVISIONS OF THIS LICENSE**

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See http://www.gnu.org/copyleft/.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation.

# **B.12 How to use this License for your documents**

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright (c) YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.1 or any later version published by the Free Software Foundation; with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have no Invariant Sections, write "with no Invariant Sections" instead of saying which ones are invariant. If you have no Front-Cover Texts, write "no Front-Cover Texts" instead of "Front-Cover Texts being LIST"; likewise for Back-Cover Texts.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
