## **Foreword**

This is version 3.2 of the LSB Desktop Specification. This specification is part of a family of specifications under the general title "Linux Standard Base". Developers of applications or implementations interested in using the LSB trademark should see the Linux Foundation Certification Policy for details.

## **Introduction**

The LSB Desktop specification defines components that are required to be present on an LSB conforming system.

This document should be used in conjunction with the documents it references. Information referenced in this way is as much a part of this document as is the information explicitly included here.

## I Introductory Elements

## **1 Scope**

The LSB Desktop module defines components found on an LSB conforming system.

## 2 References

### 2.1 Normative References

The specifications listed below are referenced in whole or in part by the LSB Desktop specification. Such references may be normative or informative; a reference to specification shall only be considered normative if it is explicitly cited as such. The LSB Desktop specification may make normative references to a portion of these specifications (that is, to define a specific function or group of functions); in such cases, only the explicitly referenced portion of the specification is to be considered normative.

### *3 Requirements*

libqt-mt	libqt-mt.so.3
----------	---------------

These libraries will be in an implementation-defined directory which the dynamic linker shall search by default.

## 4 Definitions

For the purposes of this document, the following definitions, as specified in the *ISO/IEC Directives, Part 2, 2001, 4th Edition*, apply:

can

be able to; there is a possibility of; it is possible to

cannot

be unable to; there is no possibility of; it is not possible to

may

is permitted; is allowed; is permissible

need not

it is not required that; no...is required

shall

is to; is required to; it is required that; has to; only...is permitted; it is necessary

shall not

is not allowed [permitted] [acceptable] [permissible]; is required to be not; is required that...be not; is not to be

should

it is recommended that; ought to

should not

it is not recommended that; ought not to

## 5 Terminology

For the purposes of this document, the following terms apply:

### implementation-defined

Describes a value or behavior that is not defined by this document but is selected by an implementor. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence of the value or behavior. An application that relies on such a value or behavior cannot be assured to be portable across conforming implementations. The implementor shall document such a value or behavior so that it can be used correctly by an application.

### Shell Script

A file that is read by an interpreter (e.g., awk). The first line of the shell script includes a reference to its interpreter binary.

### undefined

Describes the nature of a value or behavior not defined by this document which results from use of an invalid program construct or invalid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

### unspecified

Describes the nature of a value or behavior not specified by this document which results from use of a valid program construct or valid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

## **II Graphic Libraries**

## 6 Libraries

The X Libraries should be built thread-safe.

### 6.1 Interfaces for libX11

[Table 6-1](#) defines the library name and shared object name for the libX11 library

**Table 6-1 libX11 Definition**

Library:	libX11
SONAME:	libX11.so.6

The behavior of the interfaces in this library is specified by the following specifications:

- [LSB] [This Specification](#)
- [Xlib] [X11 C Library](#)

#### 6.1.1 X Windows System Interface

##### 6.1.1.1 Interfaces for X Windows System Interface

An LSB conforming implementation shall provide the generic functions for X Windows System Interface specified in [Table 6-2](#), with the full mandatory functionality as described in the referenced underlying specification.

## 6.2 Data Definitions for libX11

This section defines global identifiers and their values that are associated with

interfaces contained in libX11. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 6.5 Data Definitions for libSM

This section defines global identifiers and their values that are associated with interfaces contained in libSM. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 6.9 Data Definitions for libXt

This section defines global identifiers and their values that are associated with interfaces contained in libXt. These definitions are organized into groups that

correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 6.10 Interface Definitions for libXt

The interfaces defined on the following pages are included in libXt and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 6.8](#) shall behave as described in the referenced base document.

### XtCopyFromArg

#### Name

\_XtCopyFromArg – Copy "size" bytes from src to dst.

#### Synopsis

```
void _XtCopyFromArg (XtArgVal src, char* dst, unsigned int size);
```

#### Description

The \_XtCopyFromArg() function copies "size" bytes from src to dst. This is an internal X function call.

## **\_XtInherit**

### **Name**

`_XtInherit` — inheritance operation.

### **Synopsis**

```
#include <IntrinsicP.h>

extern void _XtInherit(
    #if NeedFunctionPrototypes
        void
    #endif
);
```

### **Description**

`_XtInherit()` is a procedure that issues an error message if it is actually called.

## **\_XtInheritTranslations**

### **Name**

`_XtInheritTranslations` — an inheritance constant

### **Synopsis**

```
#include <CoreP.h>

externalref int _XtInheritTranslations;
```

### **Description**

`_XtInheritTranslations` is an inheritance constant.

## **\_XtIsSubclassOf**

### **Name**

`_XtIsSubclassOf` — determine if Widget is a subclass of WidgetClass.

### **Synopsis**

```
#include <Intrinsic.h>

extern Boolean _XtIsSubclassOf(
    Widget          /* object* */,
    WidgetClass     /* widget_class */,
    WidgetClass     /* flag_class */,
    _XtTypeEnum    /* type_flag */,
);
```

### **Description**

Determine if Widget(object) is a subclass of WidgetClass(widget\_class).

## **6.11 Interfaces for libXext**

[Table 6-10](#) defines the library name and shared object name for the libXext li-

brary

**Table 6-10 libXext Definition**

Library:	libXext
SONAME:	libXext.so.6

The behavior of the interfaces in this library is specified by the following specifications:

- [X-dbe] [Double Buffer Extension Library](#)
- [X-DPMS] [X Display Power Management Signaling](#)
- [X-evi] [X Extended Visual Interface Extension](#)
- [X-security] [X Security Extension Specification](#)
- [X-shape] [X Nonrectangular Window Shape Extension Library](#)
- [X-shm] [The MIT Shared Memory Extension](#)
- [X-sync] [X Synchronization Extension Library](#)

## 6.11.1 X Shape Extension

### 6.11.1.1 Interfaces for X Shape Extension

An LSB conforming implementation shall provide the generic functions for X Shape Extension specified in [Table 6-11](#), with the full mandatory functionality as described in the referenced underlying specification.

## 6.12 Data Definitions for libXext

This section defines global identifiers and their values that are associated with interfaces contained in libXext. These definitions are organized into groups that

correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 7.2 Data Definitions for libGL

This section defines global identifiers and their values that are associated with interfaces contained in libGL. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## **IV PNG12 library**

## 8 Libraries

### 8.1 Interfaces for libpng12

[Table 8-1](#) defines the library name and shared object name for the libpng12 library

**Table 8-1 libpng12 Definition**

Library:	libpng12
SONAME:	libpng12.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

#### 8.1.1 PNG Reference library

##### 8.1.1.1 Interfaces for PNG Reference library

An LSB conforming implementation shall provide the generic functions for PNG Reference library specified in [Table 8-2](#), with the full mandatory functionality as described in the referenced underlying specification.

**Table 8-2 libpng12 - PNG Reference library Function Interfaces**

An LSB conforming implementation shall provide the generic data interfaces for PNG Reference library specified in [Table 8-3](#), with the full mandatory functionality as described in the referenced underlying specification.

## 8.2 Data Definitions for libpng12

This section defines global identifiers and their values that are associated with interfaces contained in libpng12. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of

the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

### 8.3 Interface Definitions for libpng12

The interfaces defined on the following pages are included in libpng12 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 8.1](#) shall behave as described in the referenced base document.

## **png\_access\_version\_number**

### **Name**

`png_access_version_number` — return version of the run-time library

### **Synopsis**

```
#include <png.h>
png_uint_32 png_access_version_number(void);
```

### **Description**

`png_access_version_number()` returns version of the libpng12 library available at run-time.

### **Return Value**

`png_access_version_number()` returns integer constructed from the major version, minor version with leading zero and leading number with leading zero. For example, the version number for version 1.2.8 is 10208.

## **png\_create\_info\_struct**

### **Name**

`png_create_info_struct` — allocate and initialize a `png_info` structure

### **Synopsis**

```
#include <png.h>
png_infop png_create_info_struct(png_structp png_ptr);
```

### **Description**

`png_create_info_struct()` shall allocate and initialize a `png_info` structure.

### **Return Value**

Returns the pointer to `png_info` structure. Returns NULL if it fails to create the structure.

### **Errors**

`png_create_info_struct()` shall return NULL if the allocation fails. The application should check for the return value.

## **png\_create\_read\_struct**

### **Name**

`png_create_read_struct` — allocate and initialize a `png_struct` structure for reading PNG file

### **Synopsis**

```
#include <png.h>
png_structp png_create_read_struct(png_const_charp user_png_ver,
png_voidp error_ptr, png_error_ptr error_fn, png_error_ptr warn_fn);
```

### **Description**

`png_create_read_struct()` shall allocate and initialize a `png_struct` structure. The function shall return NULL if the allocation fails. The application should check for the return value. For handling errors and warnings, the application can pass desired error handling routines as arguments to `png_create_read_struct()`. Otherwise, the default error handling uses `stderr` and `longjmp`. The error handling routine must NOT return to the calling routine.

*user\_png\_ver*

version string of the library. Must be `PNG_LIBPNG_VER_STRING`

*error\_ptr*

user defined struct for error functions.

*error\_fn*

user defined function for printing errors and aborting.

*warn\_fn*

user defined function for warnings.

### **Return Value**

Returns the pointer to `png_struct` structure. Returns NULL if it fails to create the structure.

### **Errors**

`png_create_read_struct()` shall return NULL if the allocation fails. The application should check for the return value.

## **png\_create\_write\_struct**

### **Name**

`png_create_write_struct` — allocate and initialize a `png_struct` structure for writing PNG file

### **Synopsis**

```
#include <png.h>
png_structp png_create_write_struct(png_const_charp user_png_ver,
png_voidp error_ptr, png_error_ptr error_fn, png_error_ptr warn_fn);
```

### **Description**

`png_create_write_struct()` shall allocate and initialize a `png_struct` structure. The function shall return NULL if the allocation fails. The application should check for the return value.

*user\_png\_ver*

version string of the library. Must be `PNG_LIBPNG_VER_STRING`

*error\_ptr*

user defined struct for error functions.

*error\_fn*

user defined function for printing errors and aborting.

*warn\_fn*

user defined function for warnings.

### **Return Value**

Returns the pointer to `png_struct` structure. Returns NULL if it fails to create the structure.

## **png\_destroy\_read\_struct**

### **Name**

`png_destroy_read_struct` — free the memory associated with read `png_struct`

### **Synopsis**

```
#include <png.h>
void png_destroy_read_struct(png_structpp png_ptr_ptr, png_infopp
info_ptr_ptr, png_infopp end_info_ptr_ptr);
```

### **Description**

`png_destroy_read_struct()` frees the memory associated with the read `png_struct` struct that holds information from the given PNG file, the associated `png_info` struct for holding the image information and `png_info` struct for holding the information at end of the given PNG file.

## **png\_destroy\_write\_struct**

### **Name**

`png_destroy_write_struct` — free the memory associated with write `png_struct`

### **Synopsis**

```
#include <png.h>
void png_destroy_write_struct(png_structpp png_ptr_ptr, png_infopp
info_ptr_ptr);
```

### **Description**

`png_destroy_write_struct()` frees the memory associated with the write `png_struct` struct that holds information for writing the PNG file and the associated `png_info` struct for holding the image information.

## **png\_error**

### **Name**

`png_error` — default function to handle fatal errors

### **Synopsis**

```
#include <png.h>
void png_error(png_structp png_ptr, png_const_charp error_message);
```

### **Description**

`png_error()` is the default error handling function for fatal errors. The default error handling functionality may be changed by using `png_set_error_fn()` to replace the error function at run-time.

### **Return Value**

### **Errors**

## **png\_free**

### **Name**

`png_free` — free a pointer allocated by `png_malloc()`

### **Synopsis**

```
#include <png.h>
void png_free(png_structp png_ptr, png_voidp ptr);
```

### **Description**

`png_free()` shall free memory pointed to by "ptr" previously allocated by `png_malloc()`.

## **png\_get\_IHDR**

### **Name**

`png_get_IHDR` — get PNG\_IHDR chunk information from `png_info` structure

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_IHDR(png_structp png_ptr, png_infop info_ptr,
png_uint_32 * width, png_uint_32 * height, int * bit_depth, int *
color_type, int * interlace_method, int * compression_method, int *
filter_method);
```

### **Description**

`png_get_IHDR()` gets PNG\_IHDR chunk type information from `png_info` structure.

*width*

holds the width of the image in pixels up to  $2^{31}$ .

*height*

holds the height of the image in pixels up to  $2^{31}$ .

*bit\_depth*

holds the bit depth of one of the image channels. Valid values are 1, 2, 4, 8, 16 and also depend on the `color_type`.

*color\_type*

describes which color/alpha channels are present. Supported color types shall include:

- PNG\_COLOR\_TYPE\_GRAY (bit depths 1, 2, 4, 8, 16)
- PNG\_COLOR\_TYPE\_GRAY\_ALPHA (bit depths 8, 16)
- PNG\_COLOR\_TYPE\_PALETTE (bit depths 1, 2, 4, 8)
- PNG\_COLOR\_TYPE\_RGB (bit\_depths 8, 16)
- PNG\_COLOR\_TYPE\_RGB\_ALPHA (bit\_depths 8, 16)
- PNG\_COLOR\_MASK\_PALETTE
- PNG\_COLOR\_MASK\_COLOR
- PNG\_COLOR\_MASK\_ALPHA

*filter\_method*

holds the filter method. If this argument is NULL, the filter method will not be retrieved. Valid values after retrieval are

- PNG\_FILTER\_TYPE\_BASE
- PNG\_INTRAPIXEL\_DIFFERENCING

*compression\_method*

holds the compression method. If this argument is NULL, the compression method will not be retrieved. Valid values after retrieval are PNG\_COMPRESSION\_TYPE\_BASE

*interlace\_method*

holds the interlace method. If this argument is NULL, the interlacing method will not be retrieved. Valid values after retrieval are

```
PNG_INTERLACE_NONE
PNG_INTERLACE_ADAM7
```

## Return Value

On success, `png_get_HDR()` shall return 1. Otherwise, `png_get_IHDR()` shall return 0.

## `png_get_PLTE`

### Name

`png_get_PLTE` – get image palette information from `png_info` structure

### Synopsis

```
#include <png.h>
png_uint_32 png_get_PLTE(png_structp png_ptr, png_infop info_ptr,
png_colorp * palette, int * num_palette);
```

### Description

`png_get_PLTE()` gets palette information from `png_info` structure. "palette" holds an array of color values with "num\_palette" entries.

### Return Value

On successful retrieval of palette information, `png_get_PLTE()` shall return `PNG_INFO_PLTE`. Otherwise, `png_get_PLTE()` shall return 0.

## `png_get_bKGD`

### Name

`png_get_bKGD` – get background color for given image

### Synopsis

```
#include <png.h>
png_uint_32 png_get_bKGD(png_structp png_ptr, png_infop info_ptr,
png_color_16p * background);
```

### Description

`png_get_bKGD()` shall return the background color to "background" if the validity flag for background is set.

### Return Value

On success, `png_get_bKGD()` shall return `PNG_INFO_bKGD`. Otherwise, `png_get_bKGD()` shall return 0.

## **png\_get\_bit\_depth**

### **Name**

`png_get_bit_depth — return image bit_depth`

### **Synopsis**

```
#include <png.h>
png_byte png_get_bit_depth(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

Returns the image bit\_depth.

### **Return Value**

Returns 0 if *png\_ptr* or *info\_ptr* is NULL, bit\_depth otherwise.

## **png\_get\_cHRM**

### **Name**

`png_get_cHRM — get CIE chromacities and referenced white point for given image`

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_cHRM(png_structp png_ptr, png_infop info_ptr,
double * white_x, double * white_y, double * red_x, double * red_y,
double * green_x, double * green_y, double * blue_x, double *
blue_y);
```

### **Description**

`png_get_cHRM()` shall return the CIE x,y chromaticities of the red, green and blue display primaries used in the image and the referenced white point from the cHRM chunk in the image.

### **Return Value**

On success, `png_get_cHRM()` shall return `PNG_INFO_cHRM`. Otherwise, the function shall return 0.

## **png\_get\_channels**

### **Name**

`png_get_channels` — get number of color channels in image

### **Synopsis**

```
#include <png.h>
png_byte png_get_channels(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

`png_get_channels()` shall return the number of data channels per pixel for the color type of the image. The number of channels shall range from 1-4 depending on the color type as given below.

- 1 - `PNG_COLOR_TYPE_GRAY` or `PNG_COLOR_TYPE_PALETTE`
- 2 - `PNG_COLOR_TYPE_GRAY_ALPHA`
- 3 - `PNG_COLOR_TYPE_RGB`
- 4 - `PNG_COLOR_TYPE_RGB_ALPHA` or `PNG_COLOR_TYPE_RGB+filler byte`

### **Return Value**

On success, `png_get_channels()` shall return the number of channels ranging from 1-4. Otherwise, `png_get_channels` shall return 0.

## **png\_get\_color\_type**

### **Name**

`png_get_color_type` — return image color type

### **Synopsis**

```
#include <png.h>
png_byte png_get_color_type(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

Returns the image color type.

### **Return Value**

Returns 0 if `png_ptr` or `info_ptr` is NULL, `color_type` otherwise.

## **png\_get\_error\_ptr**

### **Name**

`png_get_error_ptr` — return error\_ptr for user-defined functions

### **Synopsis**

```
#include <png.h>
png_voidp png_get_error_ptr(png_structp png_ptr);
```

### **Description**

`png_get_error_ptr()` returns the error\_ptr associated with user-defined functions.

### **Return Value**

Returns error\_ptr

## **png\_get\_gAMA**

### **Name**

`png_get_gAMA` — get the gamma value for given image

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_gAMA(png_structp png_ptr, png_infop info_ptr,
double *file_gamma);
```

### **Description**

Returns the gamma value of an image to "file\_gamma" if the gAMA chunk information is valid for the image.

### **Return Value**

PNG\_INFO\_gAMA - if `png_ptr`, `info_ptr`, `file_gamma` are not NULL and gAMA chunk information is valid 0 - otherwise.

## **png\_get\_hIST**

### **Name**

`png_get_hIST` — get the histogram for given image

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_hIST(png_structp png_ptr, png_infop info_ptr,
png_uint_16p * hist);
```

### **Description**

Returns the histogram of an image to `*hist` if the hIST chunk information is valid for the image.

### **Return Value**

`PNG_INFO_hIST` - if `png_ptr`, `info_ptr`, `hist` are not `NULL` and hIST chunk information is valid 0 - otherwise.

## **png\_get\_iCCP**

### **Name**

`png_get_iCCP` — get the embedded ICC profile data for given image

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_iCCP(png_structp png_ptr, png_infop info_ptr,
png_charpp name, int * compression_type, png_charpp profile,
png_uint_32 * proflen);
```

### **Description**

`png_get_iCCP()` shall return the embedded ICC profile data in iCCP chunk. "name" shall contain the profile name, `*compression_type` shall contain the compression type, `profile` shall contain teh International Color Consortium color profile data and `*proflen` shall contain the length of the profile data in bytes. `*compression_type` must always be set to `PNG_COMPRESSION_TYPE_BASE`.

### **Return Value**

On success, `png_get_iCCP()` shall return `PNG_INFO_iCCP`. Otherwise, the function shall return 0.

## **png\_get\_image\_height**

### **Name**

`png_get_image_height` — return image height

### **Synopsis**

```
#include <png.h>
png_uint_32    png_get_image_height(png_structp    png_ptr,      png_infop
info_ptr);
```

### **Description**

`png_get_image_height()` returns the image height in pixels.

### **Return Value**

Returns 0 if `png_ptr` or `info_ptr` is NULL, `image_height` otherwise.

## **png\_get\_image\_width**

### **Name**

`png_get_image_width` — return image width

### **Synopsis**

```
#include <png.h>
png_uint_32    png_get_image_width(png_structp    png_ptr,      png_infop
info_ptr);
```

### **Description**

`png_get_image_width()` returns the image width in pixels.

### **Return Value**

Returns 0 if `png_ptr` or `info_ptr` is NULL, `image_width` otherwise.

## **png\_get\_interlace\_type**

### **Name**

`png_get_interlace_type` — returns interlace method

### **Synopsis**

```
#include <png.h>
png_byte     png_get_interlace_type(png_structp    png_ptr,      png_infop
info_ptr);
```

### **Description**

`png_get_interlace_type()` returns the interlace method used for the image.

### **Return Value**

Valid values are `PNG_INTERLACE_NONE`, `PNG_INTERLACE_ADAM7`. Returns 0 if `png_ptr` or `info_ptr` is NULL.

## **png\_get\_io\_ptr**

### **Name**

`png_get_io_ptr` — return pointer for user-defined I/O

### **Synopsis**

```
#include <png.h>
png_voidp png_get_io_ptr(png_structp png_ptr);
```

### **Description**

Returns the pointer associated with user-defined input-output functions.

## **png\_get\_libpng\_ver**

### **Name**

`png_get_libpng_ver` — get the library version string

### **Synopsis**

```
#include <png.h>
png_charp png_get_libpng_ver(png_structp png_ptr);
```

### **Description**

`png_get_libpng_ver()` shall return the library version as a short string in the format "1.0.0" through "99.99.99zz".

## **png\_get\_oFFs**

### **Name**

`png_get_oFFs` — get screen offsets for the given image

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_oFFs(png_structp png_ptr, png_infop info_ptr,
png_int_32 * x_offset, png_int_32 * y_offset, int * unit_type);
```

### **Description**

`png_get_oFFs()` shall read the positive offset from the left edge of the screen from `info_ptr` to `x_offset` and the positive offset from the top edge of the screen to `y_offset`. The unit type shall be returned in `unit_type`, which can take the following values

- `PNG_OFFSET_PIXEL`
- `PNG_OFFSET_MICROMETER`

### **Return Value**

On success, `png_get_oFFs()` shall return `PNG_INFO_oFFs`. Otherwise, `png_get_oFFs()` shall return 0.

## **png\_get\_pHys**

### **Name**

`png_get_pHys` — get the physical resolution for given image

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_pHys(png_structp png_ptr, png_infop info_ptr,
png_uint_32 * res_x, png_uint_32 * res_y, int * unit_type);
```

### **Description**

`png_get_pHys()` shall return the physical pixel resolution of the image and the unit of resolution. Upon success, `*res_x` shall contain the horizontal resolution and `*res_y` shall contain the vertical resolution in pixels per unit. `*unit_type` will be set to `PNG_RESOLUTION_METER` if the resolution is expressed in pixels per meter. Otherwise `*unit_type` will be `PNG_RESOLUTION_UNKNOWN`.

### **Return Value**

`PNG_INFO_pHys` - on success 0 - otherwise.

## **png\_get\_progressive\_ptr**

### **Name**

`png_get_progressive_ptr` — return pointer to user-defined push read functions

### **Synopsis**

```
#include <png.h>
png_voidp png_get_progressive_ptr(png_structp png_ptr);
```

### **Description**

Returns the pointer to user-defined structure containing information about the callback functions.

## **png\_get\_rowbytes**

### **Name**

`png_get_rowbytes` — Return number of bytes for a row

### **Synopsis**

```
#include <png.h>
png_uint_32    png_get_rowbytes(png_structp      png_ptr,      png_infop
info_ptr);
```

### **Description**

`png_get_rowbytes()` returns the number of bytes needed to hold a transformed row of an image.

### **Return Value**

Returns 0 if `png_ptr` or `info_ptr` is NULL, number of bytes otherwise.

## **png\_get\_rows**

### **Name**

`png_get_rows` — retrieve image data from `png_info` structure

### **Synopsis**

```
#include <png.h>
png_bytepp png_get_rows(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

`png_get_rows()` shall retrieve rows of image data from the `info_ptr` structure in an array of pointers to the pixel data for each row.

### **Return Value**

On success, `png_get_rows()` shall return an array of pointers to the pixel data for each row of the image.

## **png\_get\_sBIT**

### **Name**

`png_get_sBIT` — get number of significant bits for each color channel

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_sBIT(png_structp png_ptr, png_infop info_ptr,
png_color_8p * sig_bit);
```

### **Description**

`png_get_sBIT()` shall return the number of significant bit for each of the gray, red, blue and green color channels.

### **Return Value**

On success, `png_get_sBIT()` shall return `PNG_INFO_sBIT`. Otherwise, `png_get_sBIT()` shall return 0.

## **png\_get\_sRGB**

### **Name**

`png_get_sRGB` — get the rendering intent for given image

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_sRGB(png_structp png_ptr, png_infop info_ptr,
int * srgb_intent);
```

### **Description**

`png_get_sRGB()` shall return the rendering intent of an image to `*srgb_intent` if the sRGB chunk information is valid for the image.

### **Return Value**

`PNG_INFO_sRGB` - if `png_ptr`, `info_ptr`, `srgb_intent` are not NULL and sRGB chunk information is valid 0 - otherwise.

## **png\_get\_tIME**

### **Name**

`png_get_tIME` — get last modification time for the image

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_tIME(png_structp png_ptr, png_infop info_ptr,
png_timep * mod_time);
```

### **Description**

`png_get_sBIT()` shall return the time of last modification of the image if the tIME information is valid for the image.

### **Return Value**

PNG\_INFO\_tIME - if `png_ptr`, `info_ptr`, `mod_time` are not NULL and tIME information is valid 0 - otherwise.

## **png\_get\_tRNS**

### **Name**

`png_get_tRNS` — get transparency data for images

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_tRNS(png_structp png_ptr, png_infop info_ptr,
png_bytеп * trans, int * num_trans, png_color_16p * trans_values);
```

### **Description**

`png_get_tRNS()` shall obtain the transparency data for palettes images and image types that don't need a full alpha channel from `info_ptr`. For a palette image, the function retrieves the transparency values stored in the same order as the palette colors, starting from index 0. For non-palette images, the function retrieves the single color value which is treated as fully transparent. If the transparency information is valid, i.e. PNG\_INFO\_tRNS bit is set for `info_ptr->valid`: \*`trans` shall be set to the transparency values for a palette image. Values for the data shall be in range [0,255], ranging from fully transparent to fully opaque, respectively. \*`num_trans` shall be set to the number of transparency values \*`trans_values` shall be set to the single color value specified for non-palette images.

### **Return Value**

Returns PNG\_INFO\_tRNS on successful return, 0 otherwise.

## **png\_get\_text**

### **Name**

`png_get_text` — get comments information from `png_info` structure

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_text(png_structp png_ptr, png_infop info_ptr,
png_textp *text_ptr, int *num_text);
```

### **Description**

`png_get_text()` returns the text chunk information from the PNG stream in the array pointed to by `text_ptr`. It also returns the number of text chunks in `num_text`. `text_ptr` is an array of structure `png_text` whose members include:

*text\_ptr[i].compression*

type of compression used on text. Valid values are:  
`PNG_TEXT_COMPRESSION_NONE`  
`PNG_TEXT_COMPRESSION_zTXt`  
`PNG_ITXT_COMPRESSION_NONE`  
`PNG_ITXT_COMPRESSION_zTXt`

*text\_ptr[i].key*

keyword for comment. Must contain 1-79 characters.

*text\_ptr[i].text*

text comment for current keyword. Maybe empty.

*text\_ptr[i].text\_length*

length of text string after decompression. 0 for iTxt.

*text\_ptr[i].itxt\_length*

length of iTxt string after decompression. 0 for tEXt/zTXt.

*text\_ptr[i].lang*

language of comment. Empty string if language is unknown.

*text\_ptr[i].lang\_key*

keyword in UTF-8. Empty string if language is unknown.

### **Return Value**

Returns 0 if `png_ptr` or `info_ptr` is NULL, returns number of text chunks otherwise.

## **png\_get\_valid**

### **Name**

`png_get_valid` – determine if given chunk data is valid

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_valid(png_structp png_ptr, png_infop info_ptr,
png_uint_32 flag);
```

### **Description**

`png_get_valid()` shall obtain the validity of chunk data specified by the bits set in "flag". The following bits may be set in flag: PNG\_INFO\_gAMA  
PNG\_INFO\_sBIT PNG\_INFO\_cHRM PNG\_INFO\_PLTE PNG\_INFO\_tRNS  
PNG\_INFO\_bKGD PNG\_INFO\_hIST PNG\_INFO\_pHYs PNG\_INFO\_oFFs  
PNG\_INFO\_tIME PNG\_INFO\_pCAL PNG\_INFO\_sRGB PNG\_INFO\_iCCP  
PNG\_INFO\_sPLT PNG\_INFO\_sCAL PNG\_INFO\_IDAT

### **Return Value**

On success, `png_get_valid()` shall return "flag" with the chunk bits set. Otherwise, `png_get_valid()` shall return 0.

## **png\_get\_x\_offset\_pixels**

### **Name**

`png_get_x_offset_pixels` – return x offset in pixels from oFFs chunk

### **Synopsis**

```
#include <png.h>
png_int_32 png_get_x_offset_pixels(png_structp png_ptr, png_infop
info_ptr);
```

### **Description**

`png_get_x_offset_pixels()` shall obtain x offset in pixels for the image from its PNG\_oFFs chunk data stored in `info_ptr`, if the unit for offset is pixels.

### **Return Value**

On success, `png_get_x_offset_pixels()` shall return x offset in pixels. Otherwise `png_get_x_offset_pixels()` shall return 0.

## **png\_get\_x\_pixels\_per\_meter**

### **Name**

`png_get_x_pixels_per_meter` — return horizontal pixel density per meter

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_x_pixels_per_meter(png_structp png_ptr, png_infop
info_ptr);
```

### **Description**

`png_get_x_pixels_per_meter()` shall obtain the horizontal pixel density in pixels per meter from its PNG\_pHYs chunk data stored in `info_ptr`, if the unit for resolution is pixels per meter.

### **Return Value**

On success, `png_get_x_pixels_per_meter()` shall return horizontal pixel density in pixels per meter. Otherwise `png_get_x_pixels_per_meter()` shall return 0.

## **png\_get\_y\_offset\_pixels**

### **Name**

`png_get_y_offset_pixels` — return y offset in pixels from oFFs chunk

### **Synopsis**

```
#include <png.h>
png_int_32 png_get_y_offset_pixels(png_structp png_ptr, png_infop
info_ptr);
```

### **Description**

`png_get_y_offset_pixels()` shall obtain y offset in pixels for the image from its PNG\_oFFs chunk data stored in `info_ptr`, if the unit for offset is pixels.

### **Return Value**

On success, `png_get_y_offset_pixels()` shall return y offset in pixels. Otherwise `png_get_y_offset_pixels()` shall return 0.

## **png\_get\_y\_pixels\_per\_meter**

### **Name**

`png_get_y_pixels_per_meter` — return vertical pixel density per meter

### **Synopsis**

```
#include <png.h>
png_uint_32 png_get_y_pixels_per_meter(png_structp png_ptr, png_infop
info_ptr);
```

### **Description**

`png_get_y_pixels_per_meter()` shall obtain the vertical pixel density in pixels per meter from its PNG\_pHYs chunk data stored in *info\_ptr*, if the unit for resolution is pixels per meter.

### **Return Value**

On success, `png_get_y_pixels_per_meter()` shall return vertical pixel density in pixels per meter. Otherwise `png_get_y_pixels_per_meter()` shall return 0.

## **png\_init\_io**

### **Name**

`png_init_io` — initialize input/output for the PNG file

### **Synopsis**

```
#include <png.h>
void png_init_io(png_structp png_ptr, png_FILE_p fp);
```

### **Description**

Initialize the default input/output functions for the PNG file to standard C streams. To replace the default read and write functions, use `png_set_read_fn()` and `png_set_write_fn()` respectively.

### **Return Value**

### **Errors**

## **png\_malloc**

### **Name**

`png_malloc` — allocate memory

### **Synopsis**

```
#include <png.h>
png_voidp png_malloc(png_structp png_ptr, png_uint_32 size);
```

### **Description**

`png_malloc()` shall return a pointer to allocated memory of the specified size.

### **Return Value**

Pointer to the block of memory allocated.

### **Errors**

Invokes error handling function if the system is out of memory and sets `PNG_FLAG_MALLOC_NULL_MEM_OK` in member flags of `png_struct`.

## **png\_process\_data**

### **Name**

`png_process_data` — read PNG file progressively

### **Synopsis**

```
#include <png.h>
void png_process_data(png_structp png_ptr, png_infop info_ptr,
png_bytep buffer, png_size_t length);
```

### **Description**

`png_process_data()` shall process data progressively from the PNG stream using callback functions set within `png_set_progressive_read_fn()`. The data is passed in "buffer" and length of data to be processed is specified by "length".

## **png\_progressive\_combine\_row**

### **Name**

`png_progressive_combine_row` — combines current row data with processed row

### **Synopsis**

```
#include <png.h>
void png_progressive_combine_row(png_structp png_ptr, png_bytep
old_row, png_bytep new_row);
```

### **Description**

For non-NULL rows of interlaced images during progressive read, `png_progressive_combine_row()` shall combine the data for the current row with the previously processed row data. `png_progressive_combine_row()` shall return for NULL rows of interlaced images and memcpys rows for non-interlaced images.

## **png\_read\_end**

### **Name**

`png_read_end` — read the end of PNG file

### **Synopsis**

```
#include <png.h>
void png_read_end(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

`png_read_end()` reads the end of a PNG file after reading the image data, including any comments or time information at the end of the file. The function shall not read past the end of the file.

## **png\_read\_image**

### **Name**

`png_read_image` — read the entire image into memory

### **Synopsis**

```
#include <png.h>
void png_read_image(png_structp png_ptr, png_bytepp image);
```

### **Description**

`png_read_image()` reads the entire image into memory at once. For each pass of an interlaced image, use `png_read_rows()` instead.

## **png\_read\_info**

### **Name**

`png_read_info` — read the PNG image information

### **Synopsis**

```
#include <png.h>
void png_read_info(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

Reads the information before the actual image data from the PNG file. The function allows reading a file that already has the PNG signature bytes read from the stream.

## **png\_read\_png**

### **Name**

`png_read_png` — read the entire PNG file

### **Synopsis**

```
#include <png.h>
void png_read_png(png_structp png_ptr, png_infop info_ptr, int
transforms, png_voidp params);
```

### **Description**

`png_read_png()` shall provide the high-level read operation. The function shall read the entire image into memory. The integer "transforms" shall contain the logical OR of a set of the following transformation flags:

*PNG\_TRANSFORM\_IDENTITY*

No transformation

*PNG\_TRANSFORM\_STRIP\_16*

Strip 16-bit samples to 8 bits

*PNG\_TRANSFORM\_STRIP\_ALPHA*

Discard the alpha channel

*PNG\_TRANSFORM\_PACKING*

Expand 1, 2 and 4-bit samples to bytes

*PNG\_TRANSFORM\_PACKSWAP*

Change order of packed pixels to LSB first

*PNG\_TRANSFORM\_EXPAND*

Expand palettes images to RGB, grayscale to 8-bit images and tRNS chunks to alpha channels

*PNG\_TRANSFORM\_INVERT\_MONO*

Invert monochrome images

*PNG\_TRANSFORM\_SHIFT*

Normalize pixels to the sBIT depth

*PNG\_TRANSFORM\_BGR*

Flip RGB to BGR, RGBA to BGRA

*PNG\_TRANSFORM\_SWAP\_ALPHA*

Flip RGBA to ARGB or GA to AG

*PNG\_TRANSFORM\_INVERT\_ALPHA*

Change alpha from opacity to transparency

*PNG\_TRANSFORM\_SWAP\_ENDIAN*

Byte-swap 16-bit samples

"params" is unused and must be set to NULL.

## **png\_read\_row**

### **Name**

`png_read_row` — read a row of image data

### **Synopsis**

```
#include <png.h>
void png_read_row(png_structp png_ptr, png_bytep row, png_bytep
display_row);
```

### **Description**

`png_read_row()` reads a row of actual image data. "row" holds the image pixels as they are processed. If the image is displayed after each pass, "display\_row" is used to display a blurred progressive image. "display\_row" can be NULL if the progressive image is not required.

## **png\_read\_rows**

### **Name**

`png_read_rows` — read multiple rows of image data

### **Synopsis**

```
#include <png.h>
void png_read_rows(png_structp png_ptr, png_bytepp row, png_bytepp
display_row, png_uint_32 num_rows);
```

### **Description**

Read "num\_rows" rows of image data starting from "row". If the image is interlaced, the rows must contain the contents of the rows from the previous pass. If the image is displayed after each pass, "display\_row" is used to display a blurred progressive image. "display\_row" can be NULL if the progressive image is not required.

## **png\_read\_update\_info**

### **Name**

`png_read_update_info` — update `png_info` structure

### **Synopsis**

```
#include <png.h>
void png_read_update_info(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

`png_read_update_info()` updates the structure pointed to by `info_ptr` to reflect any transformations that have been requested. For example, rowbytes will be updated to handle expansion of an interlaced image with `png_read_update_info()`.

## **png\_set\_IHDR**

### **Name**

`png_set_IHDR` — set the PNG\_IHDR chunk information

### **Synopsis**

```
#include <png.h>
void png_set_IHDR(png_structp png_ptr, png_infop info_ptr,
png_uint_32 width, png_uint_32 height, int bit_depth, int color_type,
int interlace_type, int compression_type, int filter_type);
```

### **Description**

`png_set_IHDR()` shall set image header information in `info_ptr`. `width` is the image width in pixels. `height` is the image height in pixels. `bit_depth` is the bit depth of the image. Valid values shall include 1, 2, 4, 8, 16 and shall also depend on the color type. `color_type` is the type of image. Supported color types shall include: `PNG_COLOR_TYPE_GRAY` (bit depths 1, 2, 4, 8, 16) `PNG_COLOR_TYPE_GRAY_ALPHA` (bit depths 8, 16) `PNG_COLOR_TYPE_PALETTE` (bit depths 1, 2, 4, 8) `PNG_COLOR_TYPE_RGB` (bit depths 8, 16) `PNG_COLOR_TYPE_RGB_ALPHA` (bit depths 8, 16) `PNG_COLOR_MASK_PALETTE` `PNG_COLOR_MASK_COLOR` `PNG_COLOR_MASK_ALPHA` `interlace_type` is the image interlace method. Supported values shall include: `PNG_INTERLACE_NONE` or `PNG_INTERLACE_ADAM7` `compression_type` is the method used for image compression. The value must be `PNG_COMPRESSION_TYPE_DEFAULT`. `filter_type` is the method used for image filtering. The value must be `PNG_FILTER_TYPE_DEFAULT`.

### **Errors**

`png_set_IHDR()` shall invoke error function if any of the arguments has an invalid value.

## **png\_set\_PLTE**

### **Name**

`png_set_PLTE` — set color values for the palette

### **Synopsis**

```
#include <png.h>
void png_set_PLTE(png_structp png_ptr, png_infop info_ptr,
png_colorp palette, int num_palette);
```

### **Description**

`png_set_PLTE()` shall set the array of color values used as palette for image to "palette". The palette shall include "num\_palette" entries.

## **png\_set\_bKGD**

### **Name**

`png_set_bKGD` — set the background color for given image

### **Synopsis**

```
#include <png.h>
void png_set_bKGD(png_structp     png_ptr,      png_infop     info_ptr,
png_color_16p background);
```

### **Description**

`png_set_bKGD()` shall set the background color of an image to "background" and sets bKGD chunk information to valid for the image.

## **png\_set\_background**

### **Name**

`png_set_background` — set the background for given image

### **Synopsis**

```
#include <png.h>
void png_set_background(png_structp     png_ptr,      png_color_16p
background_color, int background_gamma_code, int need_expand, double
background_gamma);
```

### **Description**

`png_set_background()` shall set the background of an image with alpha channel or simple transparency with the specified background color. If `background_gamma_code` is set to `PNG_BACKGROUND_GAMMA_SCREEN`, it indicates that the supplied background color is in the gamma space of the display, else if it is set to `PNG_BACKGROUND_GAMMA_FILE`, the color is in the gamma space of the file. If the background color is supplied at the original bit-depth for a grayscale image that is expanded to truecolor or to a higher bit-depth, `need_expand` must be set to 1, but if the background color is supplied at the expanded bit-depth, `need_expand` must be set to 0. Similarly for palettes images, if background color is supplied as a palette index, `need_expand` must be set to 1, else if background color is supplied as an RGB triplet, `need_expand` must be set to 0.

## **png\_set\_bgr**

### **Name**

`png_set_bgr` — set pixel order to blue, green, red

### **Synopsis**

```
#include <png.h>
void png_set_bgr(png_structp png_ptr);
```

### **Description**

`png_set_bgr()` shall set the pixel order to blue, green, red.

## **png\_set\_cHRM**

### **Name**

`png_set_cHRM` — set CIE chromacities and referenced white point for given image

### **Synopsis**

```
#include <png.h>
void png_set_cHRM(png_structp png_ptr, png_infop info_ptr, double
white_x, double white_y, double red_x, double red_y, double green_x,
double green_y, double blue_x, double blue_y);
```

### **Description**

`png_set_cHRM()` shall set the CIE x,y chromaticities of the red, green and blue display primaries for the image and the referenced white point. The values must range from 0 to 21474.83 both inclusive.

### **Errors**

`png_set_cHRM()` shall report a non-fatal error and exit if any of the chromacity values lies outside the range 0 to 21474.83.

## **png\_set\_compression\_level**

### **Name**

`png_set_compression_level` — set image compression level

### **Synopsis**

```
#include <png.h>
void png_set_compression_level(png_structp png_ptr, int level);
```

### **Description**

`png_set_compression_level()` shall set the compression level to "level". The valid values for "level" range from [0,9], corresponding directly to compression levels for zlib. The value 0 implies no compression and 9 implies maximal compression. Note: Tests have shown that zlib compression levels 3-6 usually perform as well as level 9 for PNG images, and do considerably fewer calculations.

## **png\_set\_dither**

### **Name**

`png_set_dither` — turn on dithering to 8-bit

### **Synopsis**

```
#include <png.h>
void png_set_dither(png_structp png_ptr, png_colorp palette, int
num_palette, int maximum_colors, png_uint_16p histogram, int
full_dither);
```

### **Description**

`png_set_dither()` shall set transformation to dither file to 8-bit. For the given palette with `num_palette` number of colors, the number of colors in the palette shall be reduced to fit in "maximum\_colors" if the palette is larger than `maximum_colors`. If supplied, the histogram is used to get better results of the reduced palette. For reducing the number of colors in palette, `full_dither` must be set to 0. If `full_dither` is set to 1, dithering cube shall be setup for RGB images to reduce the RGB file to a palettized file.

## **png\_set\_error\_fn**

### **Name**

`png_set_error_fn` — set user defined functions for error handling

### **Synopsis**

```
#include <png.h>
void png_set_error_fn(png_structp png_ptr, png_voidp error_ptr,
png_error_ptr error_fn, png_error_ptr warning_fn);
```

### **Description**

`png_set_error_fn()` shall replace the default error handling and warning functions with user defined function `error_fn` for handling fatal errors and function `warning_fn` for handling non-fatal errors. The replacement functions must do a `longjmp` to the last `setjmp` location if `setjmp/longjmp` method of error handling is used. If `error_fn` or `warning_fn` is `NULL`, the default functions for error handling shall be used.

## **png\_set\_expand**

### **Name**

`png_set_expand` — set expansion transformation

### **Synopsis**

```
#include <png.h>
void png_set_expand(png_structp png_ptr);
```

### **Description**

`png_set_expand()` shall set transformation in `png_ptr` such that palettes images are expanded to RGB, grayscale images of bit-depth less than 8 are expanded to 8-bit images and tRNS chunks are expanded to alpha channels.

## **png\_set\_filler**

### **Name**

`png_set_filler` — add a filler byte to given image

### **Synopsis**

```
#include <png.h>
void png_set_filler(png_structp png_ptr, png_uint_32 filler, int flags);
```

### **Description**

`png_set_filler()` shall set transformations in `png_ptr` such that a filler byte is added when an 8-bit grayscale image or 24-bit RGB image is read and a filler byte is deleted when an 8-bit grayscale image or 24-bit RGB image is written.

## **png\_set\_filter**

### **Name**

`png_set_filter` — set filtering method

### **Synopsis**

```
#include <png.h>
void png_set_filter(png_structp png_ptr, int method, int filters);
```

### **Description**

`png_set_filter()` shall set the filtering method used for scan-line filtering. The only valid value for "method" is 0. "filters" is a bitmap for which the following bits may be set. PNG\_NO\_FILTERS PNG\_FILTER\_NONE PNG\_FILTER\_SUB PNG\_FILTER\_UP PNG\_FILTER\_AVG PNG\_FILTER\_PAETH PNG\_ALL\_FILTERS

## **png\_set\_gAMA**

### **Name**

`png_set_gAMA` — set the gamma value for given image

### **Synopsis**

```
#include <png.h>
void png_set_gAMA(png_structp png_ptr, png_infop info_ptr, double file_gamma);
```

### **Description**

Sets the gamma value of an image to "file\_gamma" and sets gAMA chunk information to valid for the image.

### **Errors**

`png_set_gAMA()` shall generate warning if `file_gamma > 21474.83` or `file_gamma = 0`

## **png\_set\_gamma**

### **Name**

`png_set_gamma` — transform the image from file gamma to screen gamma

### **Synopsis**

```
#include <png.h>
void png_set_gamma(png_structp png_ptr, double screen_gamma, double file_gamma);
```

### **Description**

`png_set_gamma()` shall set the transformation for gamma correction of the PNG file based on the screen gamma i.e. the display exponent. The gamma transformation may be turned off later if no semitransparent entries are present in the tRNS array for palette images.

## **png\_set\_gray\_1\_2\_4\_to\_8**

### **Name**

`png_set_gray_1_2_4_to_8` — set expansion transformation

### **Synopsis**

```
#include <png.h>
void png_set_gray_1_2_4_to_8(png_structp png_ptr);
```

### **Description**

`png_set_gray_1_2_4_to_8()` shall set transformation in `png_ptr` such that grayscale images of bit-depth less than 8 are expanded to 8-bit images. `png_set_gray_1_2_4_to_8()` is actually an alias for `png_set_expand()`.

## **png\_set\_gray\_to\_rgb**

### **Name**

`png_set_gray_to_rgb` — expand the grayscale image to 24-bit RGB

### **Synopsis**

```
#include <png.h>
void png_set_gray_to_rgb(png_structp png_ptr);
```

### **Description**

`png_set_gray_to_rgb()` shall set transformations such that the grayscale image is converted to 24-bit RGB.

## **png\_set\_hIST**

### **Name**

`png_set_hIST` — set the histogram of color palette

### **Synopsis**

```
#include <png.h>
void png_set_hIST(png_structp png_ptr, png_infop info_ptr,
png_uint_16p hist);
```

### **Description**

`png_set_hIST()` shall set the histogram of palette to "hist".

## **png\_set\_iCCP**

### **Name**

`png_set_iCCP` — set ICC component

### **Synopsis**

```
#include <png.h>
void png_set_iCCP(png_structp png_ptr, png_infop info_ptr, png_charp
name, int compression_type, png_charp profile, png_uint_32 proflen);
```

### **Description**

`png_set_iCCP()` shall set the ICC component information to *info\_ptr*. The arguments used to describe the ICC profile information have been described below:

*name*

ICC profile name

*compression\_type*

compression type used must be 0

*profile*

profile data

*proflen*

length of profile data

## **png\_set\_interlace\_handling**

### **Name**

`png_set_interlace_handling` — get the number of passes for image interlacing

### **Synopsis**

```
#include <png.h>
int png_set_interlace_handling(png_structp png_ptr);
```

### **Description**

`png_set_interlace_handling()` shall set the scheme to interlacing for writing an image and return the number of sub-images required to write the image.

### **Return Value**

`png_set_interlace_handling()` shall return 7 if the image is interlaced, otherwise `png_set_interlace_handling()` shall return 1.

## **png\_set\_invert\_mono**

### **Name**

`png_set_invert_mono` — reverse values for monochromicity

### **Synopsis**

```
#include <png.h>
void png_set_invert_mono(png_structp png_ptr);
```

### **Description**

`png_set_invert_mono()` shall set monochromicity value 0 to white and value 1 to black.

## **png\_set\_oFFs**

### **Name**

`png_set_oFFs` — set screen offsets for given image

### **Synopsis**

```
#include <png.h>
void png_set_oFFs(png_structp png_ptr, png_infop info_ptr,
png_int_32 offset_x, png_int_32 offset_y, int unit_type);
```

### **Description**

`png_set_oFFs()` shall set the positive offset from the left edge of the screen to `offset_x` and the positive offset from the left edge of the screen to `offset_y`. The `unit_type` must be `PNG_OFFSET_PIXEL` if the offset is defined in pixels or `PNG_OFFSET_MICROMETER` if the offset is defined in microns.

## **png\_set\_pHYs**

### **Name**

`png_set_pHYs` — set physical resolution

### **Synopsis**

```
#include <png.h>
void png_set_pHYs(png_structp png_ptr, png_infop info_ptr,
png_uint_32 res_x, png_uint_32 res_y, int unit_type);
```

### **Description**

`png_set_pHYs()` sets the physical resolution for the image in pixels per unit. The physical resolution in x direction is set to `res_x` and that in y direction is set to `res_y`. `unit_type` must be set to `PNG_RESOLUTION_METER` is the unit for resolution is pixels per unit, otherwise `unit_type` must be set to `PNG_RESOLUTION_UNKNOWN`.

## **png\_set\_packing**

### **Name**

`png_set_packing` – expand image to 1 pixel per byte for bit-depths 1,2 and 4

### **Synopsis**

```
#include <png.h>
void png_set_packing(png_structp png_ptr);
```

### **Description**

`png_set_packing()` shall expand image to 1 pixel per byte for bit-depths 1, 2 and 4 without changing the order of the pixels. If `png_set_packing()` is not called, PNG files pack pixels of bit\_depths 1, 2 and 4 into bytes as small as possible, for example, 8 pixels per byte for 1-bit files.

## **png\_set\_packswap**

### **Name**

`png_set_packswap` – swap the order of pixels for packed-pixel image

### **Synopsis**

```
#include <png.h>
void png_set_packswap(png_structp png_ptr);
```

### **Description**

`png_set_swap()` shall change the pixel packing order for each byte for packed-pixel images with bit-depths 1, 2 or 4.

## **png\_set\_palette\_to\_rgb**

### **Name**

`png_set_palette_to_rgb` – set expansion transformation

### **Synopsis**

```
#include <png.h>
void png_set_palette_to_rgb(png_structp png_ptr);
```

### **Description**

`png_set_palette_to_rgb()` shall set transformation in `png_ptr` such that palettes images are expanded to RGB. `png_set_palette_to_rgb()` is actually an alias for `png_set_expand()`.

## **png\_set\_progressive\_read\_fn**

### **Name**

`png_set_progressive_read_fn` — set progressive read callback functions

### **Synopsis**

```
#include <png.h>
void png_set_progressive_read_fn(png_structp png_ptr, png_voidp
user_ptr, png_progressive_info_ptr info_callback,
png_progressive_row_ptr row_callback, png_progressive_end_ptr
end_callback);
```

### **Description**

`png_set_progressive_read_fn()` shall provide function callbacks for which shall be called for processing image data by `png_process_data()`. "info\_callback" shall be called to process header information, "row\_callback" shall be called when each row is completed and "end\_callback" shall be called to process end of image information. `png_set_progressive_read_fn()` must be called even if all callback functions are NULL. The user-defined structure pointed to by "user\_ptr" may be retrieved from inside the callbacks using function `get_progressive_ptr()`.

## **png\_set\_read\_fn**

### **Name**

`png_set_read_fn` — set user-defined function for reading a PNG stream

### **Synopsis**

```
#include <png.h>
void png_set_read_fn(png_structp png_ptr, png_voidp io_ptr,
png_rw_ptr read_data_fn);
```

### **Description**

`png_set_read_fn()` sets the `read_data_fn` as the input function for reading PNG files instead of using standard C I/O stream functions. `png_ptr` - pointer to input data structure `png_struct` `io_ptr` - pointer to user-defined structure containing information about the input functions. This value may be NULL. `read_data_fn` - pointer to new input function that shall take the following arguments: - a pointer to a `png_struct` - a pointer to a structure where input data can be stored - 32-bit unsigned int to indicate number of bytes to read The input function should invoke `png_error()` to handle any fatal errors and `png_warning()` to handle non-fatal errors.

## **png\_set\_rgb\_to\_gray**

### **Name**

`png_set_rgb_to_gray` — reduce 24-bit RGB to grayscale image

### **Synopsis**

```
#include <png.h>
void png_set_rgb_to_gray(png_structp png_ptr);
```

### **Description**

`png_set_rgb_to_gray()` shall set transformations such that the 24-bit RGB image is converted to grayscale.

## **png\_set\_rows**

### **Name**

`png_set_rows` — put image data in `png_info` structure

### **Synopsis**

```
#include <png.h>
void png_set_rows(png_structp png_ptr, png_infop info_ptr,
png_bytepp row_pointers);
```

### **Description**

`png_set_rows()` shall put rows of image data into the `info_ptr` structure, where `row_pointers` is an array of pointers to the pixel data for each row.

## **png\_set\_sBIT**

### **Name**

`png_set_sBIT` — set number of significant bits for each channel

### **Synopsis**

```
#include <png.h>
void png_set_sBIT(png_structp png_ptr, png_infop info_ptr,
png_color_8p sig_bit);
```

### **Description**

`png_set_sBIT` shall set the number of significant bits for each of gray, red, green and blue channels, whichever are appropriate for the given color type.

## **png\_set\_sRGB**

### **Name**

`png_set_sRGB` — set the rendering intent for given image

### **Synopsis**

```
#include <png.h>
void png_set_sRGB(png_structp png_ptr, png_infop info_ptr, int srgb_intent);
```

### **Description**

`png_set_sRGB()` shall set the rendering intent of an image as specified by `srgb_intent` and shall set the sRGB chunk information to valid for the image. The presence of sRGB chunk implies that the pixel data is in the sRGB color space. `srgb_intent` can take one of the following values

- PNG\_sRGB\_INTENT\_SATURATION
- PNG\_sRGB\_INTENT\_PERCEPTUAL
- PNG\_sRGB\_INTENT\_ABSOLUTE
- PNG\_sRGB\_INTENT\_RELATIVE

## **png\_set\_shift**

### **Name**

`png_set_shift` — shift pixel values to valid bit-depth

### **Synopsis**

```
#include <png.h>
void png_set_shift(png_structp png_ptr, png_color_8p true_bits);
```

### **Description**

If image data in a row buffer is stored in a bit depth other than those supported by PNG, `png_set_shift()` shall scale the values to a valid bit-depth defined by PNG format. For example, 3-bit data in range 0-7 is scaled to 4-bit PNG.

## **png\_set\_sig\_bytes**

### **Name**

`png_set_sig_bytes` — number of bytes read from PNG file

### **Synopsis**

```
#include <png.h>
void png_set_sig_bytes(png_structp png_ptr, int num_bytes);
```

### **Description**

`png_set_sig_bytes()` shall store the number of bytes of the PNG file signature that have been read from the PNG stream.

### **Errors**

`png_set_sig_bytes()` shall invoke error function if `num_bytes > 8`.

## **png\_set\_strip\_16**

### **Name**

`png_set_strip_16` — strip 16 bit PNG file to 8 bit depth

### **Synopsis**

```
#include <png.h>
void png_set_strip_16(png_structp png_ptr);
```

### **Description**

`png_set_strip_16()` shall strip the pixels of a PNG stream with 16 bits per channel to 8 bits per channel.

## **png\_set\_strip\_alpha**

### **Name**

`png_set_strip_alpha` — remove alpha channel on the given image

### **Synopsis**

```
#include <png.h>
void png_set_strip_alpha(png_structp png_ptr);
```

### **Description**

`png_set_strip_alpha()` shall set transformation on the image to remove the alpha channel.

## **png\_set\_swap**

### **Name**

`png_set_swap` — swap byte-order for 16 bit depth files

### **Synopsis**

```
#include <png.h>
void png_set_swap(png_structp png_ptr);
```

### **Description**

PNG files store 16-bit pixels in network byte order (big-endian, ie most significant bytes first). `png_set_swap()` shall switch the byte-order to little-endian (ie, least significant bits first).

## **png\_set\_swap\_alpha**

### **Name**

`png_set_swap_alpha` — swap image data from RGBA to ARGB format

### **Synopsis**

```
#include <png.h>
void png_set_swap_alpha(png_structp png_ptr);
```

### **Description**

`png_set_swap_alpha()` shall swap data for an image with an alpha channel from RGBA format to ARGB format.

## **png\_set\_tIME**

### **Name**

`png_set_tIME` — set last modification time for the image

### **Synopsis**

```
#include <png.h>
void png_set_tIME(png_structp png_ptr, png_infop info_ptr, png_timep mod_time);
```

### **Description**

`png_set_sBIT` shall set the time of last modification of the image in `info_ptr` as specified by `mod_time`.

## **png\_set\_tRNS**

### **Name**

`png_set_tRNS` — set transparency values for images

### **Synopsis**

```
#include <png.h>
void png_set_tRNS(png_structp png_ptr, png_infop info_ptr, png_bytep
trans, int num_trans, png_color_16p trans_values);
```

### **Description**

`png_set_tRNS()` shall set the transparency data for palettes images and image types that don't need a full alpha channel. For a palette image, `png_set_tRNS()` shall set the array of transparency values for the palette colors to "trans". The number of transparency entries is given by "num\_trans". For non-palette images, `png_set_tRNS()` shall set the single color value or graylevel to "trans\_values"

## **png\_set\_tRNS\_to\_alpha**

### **Name**

`png_set_tRNS_to_alpha` — set expansion transformation

### **Synopsis**

```
#include <png.h>
void png_set_tRNS_to_alpha(png_structp png_ptr);
```

### **Description**

`png_set_tRNS_to_alpha()` shall set transformation in *png\_ptr* such that tRNS chunks are expanded to alpha channels. `png_set_tRNS_to_alpha()` is actually an alias for `png_set_expand()`.

## **png\_set\_text**

### **Name**

`png_set_text` — stores information for image comments

### **Synopsis**

```
#include <png.h>
void png_set_text(png_structp png_ptr, png_infop info_ptr, png_textp
text_ptr, int num_text);
```

### **Description**

`png_set_text()` shall store information for image comments given in `text_ptr` to `info_ptr`. `text_ptr` is an array of size "num\_text" of `png_text` structure whose member fields include: `compression` - type of compression used on text. Supported values are: `PNG_TEXT_COMPRESSION_NONE` `PNG_TEXT_COMPRESSION_zTXt` `PNG_ITXT_COMPRESSION_NONE` `PNG_ITXT_COMPRESSION_zTXt` `key` - keyword for comment. Must contain 1-79 characters. `text` - text comments for current keyword. Maybe NULL or empty. `text_length` - length of text string after decompression. Must be 0 for iTxt `itxt_length` - length of itxt string after decompression. Must be 0 for tExT/zTXt `lang` - language of comment. May be NULL or empty if language is unknown. `lang_key` - translated keyword in UTF-8 coding. Maybe NULL or empty.

## **png\_set\_write\_fn**

### **Name**

`png_set_write_fn` — set user-defined function for writing a PNG stream

### **Synopsis**

```
#include <png.h>
void png_set_write_fn(png_structp png_ptr, png_voidp io_ptr,
png_rw_ptr write_data_fn, png_flush_ptr output_flush_fn);
```

### **Description**

`png_set_write_fn()` sets the `write_data_fn` as the output function for writing PNG files instead of using standard C I/O stream functions. `png_ptr` - pointer to output data structure `png_struct` `io_ptr` - pointer to user-defined structure containing information about the output functions. This value may be NULL. `write_data_fn` - pointer to new output function that shall take the following arguments: - a pointer to a `png_struct` - a pointer to a structure where output data can be stored - 32-bit unsigned int to indicate number of bytes to write The output function should invoke `png_error()` to handle any fatal errors and `png_warning()` to handle non-fatal errors. `flush_data_fn` - pointer to a new flush function that shall take a pointer to a `png_struct` as argument. This function shall flush any remaining data in buffers used by the output function. If the output function does not buffer output, a function prototype must still be supplied.

## **png\_sig\_cmp**

### **Name**

`png_sig_cmp` – match the PNG signature

### **Synopsis**

```
#include <png.h>
int png_sig_cmp(png_bytep sig, png_size_t start, png_size_t num_to_check);
```

### **Description**

`png_sig_cmp()` checks whether the given number of bytes match the PNG signature starting from the start position. The function shall return non-zero if `num_to_check == 0` or `start > 7`.

### **Return Value**

Zero - the given number of bytes starting from start position match the respective bytes of the PNG signature. Non-zero - the given number of bytes starting from start position do not match the respective bytes of the PNG signature or `num_to_check == 0` or `start > 7`.

## **png\_warning**

### **Name**

`png_warning` – default function to handle non-fatal errors

### **Synopsis**

```
#include <png.h>
void png_warning(png_structp png_ptr, png_const_charp warning_message);
```

### **Description**

`png_warning()` is the default function for handling non-fatal errors. The default function to handle warnings may be changed by using `png_set_error_fn()` to replace the warning function at run-time.

## **png\_write\_chunk**

### **Name**

`png_write_chunk` – write a PNG chunk

### **Synopsis**

```
#include <png.h>
void png_write_chunk(png_structp png_ptr, png_bytep chunk_name,
png_bytep data, png_size_t length);
```

### **Description**

`png_write_chunk()` writes the start of a PNG chunk, the chunk data and the end of the chunk all at once.

## **png\_write\_end**

### **Name**

`png_write_end` — write the end of a PNG file

### **Synopsis**

```
#include <png.h>
void png_write_end(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

`png_write_end()` writes the end of a PNG file to which the image data has already been written. The user may write time information or comments at the end of the PNG file.

## **png\_write\_flush**

### **Name**

`png_write_flush` — flush the current output buffers

### **Synopsis**

```
#include <png.h>
void png_write_flush(png_structp png_ptr);
```

### **Description**

`png_write_flush()` shall flush the current output buffers for any pending data.

## **png\_write\_image**

### **Name**

`png_write_image` — write the given image data

### **Synopsis**

```
#include <png.h>
void png_write_image(png_structp png_ptr, png_bytepp image);
```

### **Description**

Write the rows of given image data. If the image is not interlaced, the image shall be written in a single pass.

## **png\_write\_info**

### **Name**

`png_write_info` — write PNG information to file

### **Synopsis**

```
#include <png.h>
void png_write_info(png_structp png_ptr, png_infop info_ptr);
```

### **Description**

`png_write_info()` writes the PNG information in `info_ptr` to file.

## **png\_write\_png**

### **Name**

`png_write_png` — write the entire PNG file

### **Synopsis**

```
#include <png.h>
void png_write_png(png_structp png_ptr, png_infop info_ptr, int
transforms, png_voidp params);
```

### **Description**

`png_write_png()` shall provide the high-level write operation. The function shall write the PNG stream if the entire image information is available in `png_ptr`. The integer "transforms" shall contain the logical OR of a set of the following transformation flags:

*PNG\_TRANSFORM\_IDENTITY*

No transformation

*PNG\_TRANSFORM\_PACKING*

Expand 1, 2 and 4-bit samples to bytes

*PNG\_TRANSFORM\_PACKSWAP*

Change order of packed pixels to LSB first

*PNG\_TRANSFORM\_INVERT\_MONO*

Invert monochrome images

*PNG\_TRANSFORM\_SHIFT*

Normalize pixels to the sBIT depth

*PNG\_TRANSFORM\_BGR*

Flip RGB to BGR, RGBA to BGRA

*PNG\_TRANSFORM\_SWAP\_ALPHA*

Flip RGBA to ARGB or GA to AG

*PNG\_TRANSFORM\_INVERT\_ALPHA*

Change alpha from opacity to transparency

*PNG\_TRANSFORM\_SWAP\_ENDIAN*

Byte-swap 16-bit samples

*PNG\_TRANSFORM\_STRIP\_FILLER*

Strip off filler bytes

"params" is unused and must be set to NULL.

## **png\_write\_row**

### **Name**

`png_write_row` — write a row of image data

### **Synopsis**

```
#include <png.h>
void png_write_row(png_structp png_ptr, png_bytep row);
```

### **Description**

Process and write a row of image data. The header information must have been written before the image data can be written.

## **png\_write\_rows**

### **Name**

`png_write_rows` — write multiple rows of image data

### **Synopsis**

```
#include <png.h>
void png_write_rows(png_structp png_ptr, png_bytepp row, png_uint_32
num_rows);
```

### **Description**

Process and write "num\_rows" rows of image data starting from "row".

## 9.2 Data Definitions for libjpeg

This section defines global identifiers and their values that are associated with interfaces contained in libjpeg. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 9.3 Interface Definitions for libjpeg

The interfaces defined on the following pages are included in libjpeg and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 9.1](#) shall behave as described in the referenced base document.

### **jpeg\_CreateCompress**

#### **Name**

`jpeg_CreateCompress` – allocate and initialize a JPEG compression object

#### **Synopsis**

```
#include <jpeglib.h>
void jpeg_CreateCompress(j_compress_ptr cinfo, int version, size_t
size);
```

#### **Description**

The function `jpeg_CreateCompress()` shall allocate and initialize a JPEG compression object of type struct `jpeg_compress_struct`. The error handler structure of type struct `jpeg_error_mgr` must be initialized before making a call to `jpeg_CreateCompress()`. `JPEG_LIB_VERSION` and size of the structure used to hold the JPEG compression object struct `jpeg_compress_struct` must be passed in arguments `version` and `size` respectively.

#### **Errors**

`jpeg_CreateCompress()` shall exit via the error handler if it fails to allocate memory.

## **jpeg\_CreateDecompress**

### **Name**

`jpeg_CreateDecompress` — allocate and initialize a JPEG decompression object

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_CreateDecompress(j_decompress_ptr cinfo, int version,
size_t size);
```

### **Description**

The function `jpeg_CreateDecompress()` shall allocate and initialize a JPEG decompression object of type struct `jpeg_decompress_struct`. The error handler structure of type struct `jpeg_error_mgr` must be initialized before making a call to `jpeg_CreateDecompress()`. `JPEG_LIB_VERSION` and size of the structure used to hold the JPEG compression object struct `jpeg_decompress_struct` must be passed in arguments `version` and `size` respectively.

### **Errors**

`jpeg_CreateDecompress()` shall exit via the error handler if it fails to allocate memory.

## **jpeg\_abort**

### **Name**

`jpeg_abort` — aborts the compression or decompression cycle

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_abort(j_common_ptr cinfo);
```

### **Description**

The function `jpeg_abort()` shall abort the processing of a compression or decompression operation. The function shall return the given object to an idle state releasing any working memory. The object may be reused after a call to `jpeg_abort()`.

## **jpeg\_abort\_compress**

### **Name**

`jpeg_abort_compress` — abort processing of JPEG compression operation

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_abort_compress(j_compress_ptr cinfo);
```

### **Description**

The function `jpeg_abort_compress()` shall abort the processing of a JPEG compression operation. The function shall return the given compression object to an idle state releasing any working memory. The compression object may be reused after a call to `jpeg_abort_compress()`.

## **jpeg\_abort\_decompress**

### **Name**

`jpeg_abort_decompress` — abort processing of JPEG decompression operation

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_abort_decompress(j_decompress_ptr cinfo);
```

### **Description**

The function `jpeg_abort_decompress()` shall abort the processing of a JPEG decompression operation. The function shall return the given decompression object to an idle state releasing any working memory. The decompression object may be reused after a call to `jpeg_abort_decompress()`.

## **jpeg\_add\_quant\_table**

### **Name**

`jpeg_add_quant_table` – add a quantization table

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_add_quant_table(j_compress_ptr cinfo, int table_slot, const
    unsigned int * basic_table, int scale_factor, boolean
    force_baseline);
```

### **Description**

The function `jpeg_add_quant_table()` shall add a quantization table parameter at the "table\_slot" index of the quantization table array. "basic\_table" points to an array of 64 unsigned ints given in normal array order. These values are multiplied by "scale\_factor"/100. The values are limited to the range 1..65535. If "force\_baseline" is TRUE, the computed quantization table entries are limited to 1..255 for JPEG baseline compatibility.

### **Errors**

`jpeg_add_quant_table()` shall return error and exit if "table\_slot" is >= NUM\_QUANT\_TBLS. `jpeg_add_quant_table()` shall return error and exit if the state of the compression object indicates that the compression cycle has started.

## **jpeg\_alloc\_huff\_table**

### **Name**

`jpeg_alloc_huff_table` – allocate Huffman table

### **Synopsis**

```
#include <jpeglib.h>
JHUFF_TBL * jpeg_alloc_huff_table(j_common_ptr cinfo);
```

### **Description**

`jpeg_alloc_huff_table()` shall allocate memory for a structure holding Huffman coding table.

### **Return Value**

`jpeg_alloc_huff_table()` shall return a pointer to allocated data structure for the Huffman coding table.

## **jpeg\_alloc\_quant\_table**

### **Name**

`jpeg_alloc_quant_table` — allocate quantization table

### **Synopsis**

```
#include <jpeglib.h>
JQUANT_TBL * jpeg_alloc_quant_table(j_common_ptr cinfo);
```

### **Description**

`jpeg_alloc_quant_table()` shall allocate memory for a structure holding quantization table.

### **Return Value**

`jpeg_alloc_quant_table()` shall return a pointer to allocated data structure for the quantization table.

## **jpeg\_calc\_output\_dimensions**

### **Name**

`jpeg_calc_output_dimensions` — compute output image dimensions

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_calc_output_dimensions(j_decompress_ptr cinfo);
```

### **Description**

`jpeg_calc_output_dimensions()` computes the output image dimensions based on the current compression parameter settings in the compression object. The following dimensions shall be computed:

*output\_width*

actual width of output image

*output\_height*

actual height of output image

*out\_color\_components*

number of color components in *out\_color\_space*

*output\_components*

number of color components returned

*rec\_outbuf\_height*

recommended height of scanline buffer

## **jpeg\_consume\_input**

### **Name**

`jpeg_consume_input` — decode input data

### **Synopsis**

```
#include <jpeglib.h>
int jpeg_consume_input(j_decompress_ptr cinfo);
```

### **Description**

`jpeg_consume_input()` shall decode the input data as it arrives, even if it is not to be displayed.

### **Return Value**

`jpeg_consume_input()` shall return with one of the following return codes:

*JPEG\_REACHED\_SOS*  
reached SOS marker

*JPEG\_REACHED\_EOI*  
reached EOI marker

*JPEG\_ROW\_COMPLETED*  
completed reading one MCU row of compressed data

*JPEG\_SCAN\_COMPLETED*  
completed reading last MCU row of compressed scan

*JPEG\_SUSPENDED*  
if data source module requests suspension of the decompressor.

## **jpeg\_copy\_critical\_parameters**

### **Name**

`jpeg_copy_critical_parameters` — copy critical compression parameters from source decompression object

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_copy_critical_parameters(j_decompress_ptr srcinfo,
j_compress_ptr dstinfo);
```

### **Description**

`jpeg_copy_critical_parameters()` shall initialize the compression object with default parameters, then copy the parameters needed for lossless transcoding from the source decompression object.

## **jpeg\_default\_colorspace**

### **Name**

`jpeg_default_colorspace` — set default colorspace based on input image's color space

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_default_colorspace(j_compress_ptr cinfo);
```

### **Description**

`jpeg_default_colorspace()` shall set the JPEG color space to a default value based on the color space of the input image.

## **jpeg\_destroy**

### **Name**

`jpeg_destroy` — deallocation of a JPEG object

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_destroy(j_common_ptr cinfo);
```

### **Description**

The function `jpeg_destroy()` shall deallocate and release all memory associated with the JPEG object. The object itself and the error manager struct allocated by the application should not be freed by this function.

## **jpeg\_destroy\_compress**

### **Name**

`jpeg_destroy_compress` — deallocate a JPEG compression object

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_destroy_compress(j_compress_ptr cinfo);
```

### **Description**

The function `jpeg_destroy_compress()` shall deallocate and release all memory associated with the compression object. The `jpeg_compress_struct` itself and the error manager struct allocated by the application should not be freed by this function.

## **jpeg\_destroy\_decompress**

### **Name**

`jpeg_destroy_decompress` — deallocate a JPEG decompression object

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_destroy_decompress(j_decompress_ptr cinfo);
```

### **Description**

The function `jpeg_destroy_decompress()` shall deallocate and release all memory associated with the decompression object. The `jpeg_decompress_struct` itself and the error manager struct allocated by the application should not be freed by this function.

## **jpeg\_finish\_compress**

### **Name**

`jpeg_finish_compress` — complete the compression cycle

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_finish_compress(j_compress_ptr cinfo);
```

### **Description**

The function `jpeg_finish_compress()` shall set the compression state to completion. Any remaining bufferload of data shall be written to the data destination. `jpeg_finish_compress()` shall also release working memory associated with the JPEG object.

### **Errors**

`jpeg_finish_compress()` shall return error if the function is invoked before writing the specified number of scanlines.

## **jpeg\_finish\_decompress**

### **Name**

`jpeg_finish_decompress` – complete decompression cycle

### **Synopsis**

```
#include <jpeglib.h>
boolean jpeg_finish_decompress(j_decompress_ptr cinfo);
```

### **Description**

The function `jpeg_finish_decompress()` shall set the decompression state to completion. Any remaining input data shall be decoded and consumed. `jpeg_finish_decompress()` shall also release working memory associated with the JPEG object.

### **Return Value**

`jpeg_finish_decompress()` shall return FALSE if data source requests suspension of the decompressor. Otherwise, `jpeg_finish_decompress()` shall return TRUE.

### **Errors**

`jpeg_finish_decompress()` shall return error if the function is invoked before reading the specified number of scanlines.

## **jpeg\_finish\_output**

### **Name**

`jpeg_finish_output` – complete pass in buffered-image mode

### **Synopsis**

```
#include <jpeglib.h>
boolean jpeg_finish_output(j_decompress_ptr cinfo);
```

### **Description**

`jpeg_start_output()` shall change state for completion of an output pass in buffered-image mode. The scan number shall be incremented if the end-of-image marker is not reached.

### **Return Value**

`jpeg_finish_output()` shall return FALSE if decompression is suspended. Otherwise, `jpeg_finish_output()` shall return TRUE.

## **jpeg\_has\_multiple\_scans**

### **Name**

`jpeg_has_multiple_scans` — test if input image has multiple scans

### **Synopsis**

```
#include <jpeglib.h>
boolean jpeg_has_multiple_scans(j_decompress_ptr cinfo);
```

### **Description**

`jpeg_has_multiple_scans()` shall return TRUE if the incoming image file has more than one scan.

### **Return Value**

TRUE for multiple scans, FALSE otherwise.

## **jpeg\_input\_complete**

### **Name**

`jpeg_input_complete` — test for end-of-image

### **Synopsis**

```
#include <jpeglib.h>
boolean jpeg_input_complete(j_decompress_ptr cinfo);
```

### **Description**

`jpeg_input_complete()` shall return TRUE if the end-of-image marker has not been read for the input image file.

### **Return Value**

TRUE if reached EOI, FALSE otherwise.

## **jpeg\_new\_colormap**

### **Name**

`jpeg_new_colormap` — switch to a new external colormap between output passes

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_new_colormap(j_decompress_ptr cinfo);
```

### **Description**

`jpeg_new_colormap()` shall select 2-pass quantizer for using an external colormap and notify the quantizer of the switch to a colormap that is different from the one used in the previous pass. The new colormap must be set using `cinfo.colormap` before a call to `jpeg_new_colormap()`.

## **jpeg\_quality\_scaling**

### **Name**

`jpeg_quality_scaling` – convert quality scaling to percentage scaling factor

### **Synopsis**

```
#include <jpeglib.h>
int jpeg_quality_scaling(int quality);
```

### **Description**

The function `jpeg_quality_scaling()` shall convert a user-specified quality rating to a percentage scaling factor for an underlying quantization table, using IJG-recommended scaling curve. The input "quality" factor ranges from 0 to 100.

### **Return Value**

`jpeg_quality_scaling()` shall return the integer value of quality as a percentage.

## **jpeg\_read\_coefficients**

### **Name**

`jpeg_read_coefficients` – read the contents of JPEG file as DCT coefficients

### **Synopsis**

```
#include <jpeglib.h>
jvirt_barray_ptr * jpeg_read_coefficients(j_decompress_ptr cinfo);
```

### **Description**

`jpeg_read_coefficients()` shall return the contents of the JPEG image file as DCT coefficients. The entire image shall be read as a set of virtual coefficient-block arrays, one array per component. The return value is a pointer to an array of virtual-array descriptors.

Each block in the block arrays shall contain quantized coefficient values in normal array order and not JPEG zigzag order. The block arrays shall contain only DCT blocks containing real data; any entirely-dummy blocks added to fill out interleaved MCUs at the right or bottom edges of the image shall be discarded during reading and shall not be stored in the block arrays. The size of each block array can be determined from the `width_in_blocks` and `height_in_blocks` fields of the component's `comp_info` entry.

### **Return Value**

`jpeg_read_coefficients()` shall return a pointer to an array of virtual-array descriptors containing DCT coefficients.

## **jpeg\_read\_header**

### **Name**

`jpeg_read_header` — read start of JPEG datastream

### **Synopsis**

```
#include <jpeglib.h>
int jpeg_read_header(j_decompress_ptr cinfo, boolean require_image);
```

### **Description**

The function `jpeg_read_header()` shall read the JPEG datastream until the first SOS marker is encountered. The function shall initialize all decompression parameters to default values and save all tables and parameters in the decompression object structure.

### **Return Value**

`jpeg_read_header()` shall return with one of the following return codes:

*JPEG\_HEADER\_OK*

if SOS marker is reached

*JPEG\_HEADER\_TABLES\_ONLY*

for an abbreviated input image, if EOI is reached

*JPEG\_SUSPENDED*

if data source module requests suspension of the decompressor.

### **Errors**

`jpeg_read_header()` returns error if it encounters end-of-image and `require_image` is TRUE.

## **jpeg\_read\_raw\_data**

### **Name**

`jpeg_read_raw_data` — read raw downsampled image data

### **Synopsis**

```
#include <jpeglib.h>
JDIMENSION jpeg_read_raw_data(j_decompress_ptr cinfo, JSAMPIMAGE
data, JDIMENSION max_lines);
```

### **Description**

`jpeg_read_raw_data()` shall return upto `max_lines` number of scanlines of raw downsampled data into the `JSAMPIMAGE` array argument. The data buffer must be of atleast `max_v_samp_factor*DCTSIZE` scanlines as `jpeg_read_raw_data()` shall return one MCU row per call.

The passed `max_lines` value must be atleast (`cinfo->max_v_samp_factor * DCTSIZE`). Before starting the decompression sequence, `cinfo->raw_data_out` must be set to TRUE.

### **Return Value**

`jpeg_read_raw_data()` shall return the number of scanlines processed. `jpeg_read_raw_data()` shall return 0 if the data source is suspended.

### **Errors**

`jpeg_read_raw_data()` shall report error and exit if `max_lines` is less than (`cinfo->max_v_samp_factor*DCTSIZE`).

## **jpeg\_read\_scanlines**

### **Name**

`jpeg_read_scanlines` — read scanlines of data from JPEG decompressor

### **Synopsis**

```
#include <jpeglib.h>
JDIMENSION jpeg_read_scanlines(j_decompress_ptr cinfo, JSAMPARRAY
scanlines, JDIMENSION max_lines);
```

### **Description**

`jpeg_read_scanlines()` shall return upto the maximum number of scanlines of decompressed image data. This may be less than the number requested in cases such as bottom of image, data source suspension, and operating modes that emit multiple scanlines at a time. Image data shall be returned in top-to-bottom scanline order.

### **Return Value**

On success, `jpeg_read_scanlines()` shall return the number of lines actually read.

### **Errors**

`jpeg_read_scanlines()` shall report a non-fatal error if the requested number of scanlines is greater than the height of the original unscaled image.

## **jpeg\_resync\_to\_restart**

### **Name**

`jpeg_resync_to_restart` — resync if marker other than expected restart marker found

### **Synopsis**

```
#include <jpeglib.h>
boolean jpeg_resync_to_restart(j_decompress_ptr cinfo, int desired);
```

### **Description**

`jpeg_resync_to_restart()` is the default resync procedure that a data source manager can invoke when the decompressor fails to find a restart (RSTn) marker where one is expected. The function shall find a suitable point for resuming decompression and position the input stream to the next data segment. The desired restart marker number (0..7) is passed as argument "desired".

### **Return Value**

`jpeg_resync_to_restart()` shall return FALSE if decompression is suspended. Otherwise, `jpeg_start_output()` shall return TRUE.

## **jpeg\_save\_markers**

### **Name**

`jpeg_save_markers` — save the contents of special markers

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_save_markers(j_decompress_ptr cinfo, int marker_code,
unsigned int length_limit);
```

### **Description**

`jpeg_save_markers()` shall obtain `length_limit` bytes of special markers of type specified by `marker_code`. The `marker_code` shall take one of the following values: `JPEG_COM`, `JPEG_APP0` - `JPEG_APP15`. The marker contents shall be stored in the marker field of `cinfo`. If `length_limit` is `0xFFFF`, all marker bytes are saved.

## **jpeg\_set\_colorspace**

### **Name**

`jpeg_set_colorspace` — set JPEG file's colorspace

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_set_colorspace(j_compress_ptr cinfo, J_COLOR_SPACE colorspace);
```

### **Description**

`jpeg_set_colorspace()` shall set the JPEG file's colorspace to the given color space. The function may change the value of other compression parameters that are dependent on color space.

### **Errors**

`jpeg_set_colorspace()` shall return error and exit if the state of the compression object indicates that the compression cycle has started.

## **jpeg\_set\_defaults**

### **Name**

`jpeg_set_defaults` — set compression parameters to default values

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_set_defaults(j_compress_ptr cinfo);
```

### **Description**

The function `jpeg_set_defaults()` shall set all JPEG compression parameters to default values using the input image's color space.

### **Errors**

`jpeg_set_defaults()` shall return error and exit if the state of the compression object indicates that the compression cycle has started.

## **jpeg\_set\_linear\_quality**

### **Name**

`jpeg_set_linear_quality` — construct JPEG quantization tables for indicated scale factor

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_set_linear_quality(j_compress_ptr cinfo, int scale_factor,
                             boolean force_baseline);
```

### **Description**

The function `jpeg_set_linear_quality()` shall construct JPEG quantization tables from the sample table values in JPEG specification Section K.1, multiplied by the given percentage scale factor. If "force\_baseline" is TRUE, the computed quantization table entries are limited to 1..255 for JPEG baseline compatibility.

## **jpeg\_set\_marker\_processor**

### **Name**

`jpeg_set_marker_processor` — set processor method for COM or APPn markers

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_set_marker_processor(j_decompress_ptr cinfo, int
marker_code, jpeg_marker_parser_method routine);
```

### **Description**

`jpeg_set_marker_processor()` shall set a marker processor routine having signature `boolean jpeg_marker_parser_method() j_decompress_ptr cinfo`. The marker processor routine must return TRUE if the marker and its parameters are processed completely. The routine must return FALSE if it is forced to suspend before reaching the end of marker parameters.

## **jpeg\_set\_quality**

### **Name**

`jpeg_set_quality` — construct JPEG quantization tables for indicated quality

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_set_quality(j_compress_ptr cinfo, int quality, boolean
force_baseline);
```

### **Description**

The function `jpeg_set_quality()` shall construct JPEG quantization tables for the given quality setting. The quality value ranges from 0..100. If "force\_baseline" is TRUE, the computed quantization table entries are limited to 1..255 for JPEG baseline compatibility.

## **jpeg\_simple\_progression**

### **Name**

`jpeg_simple_progression` — generate scan script for writing progressive JPEG file

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_simple_progression(j_compress_ptr cinfo);
```

### **Description**

The function `jpeg_simple_progression()` shall generate a default scan script for writing a progressive JPEG file.

## **jpeg\_start\_compress**

### **Name**

`jpeg_start_compress` — initialize a compression cycle

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_start_compress(j_compress_ptr cinfo, boolean write_all_tables);
```

### **Description**

The function `jpeg_start_compress()` shall initialize state for a JPEG compression cycle. The compression parameters, data destination and source image information must be set prior to the invocation of `jpeg_start_compress()`. Setting `write_all_tables` to TRUE shall indicate that a complete JPEG interchange datastream will be written and all Huffman tables shall be emitted. If `write_all_tables` is set to FALSE, the default behavior shall be to emit a pure abbreviated image with no tables.

## **jpeg\_start\_decompress**

### **Name**

`jpeg_start_decompress` — initialize a decompression cycle

### **Synopsis**

```
#include <jpeglib.h>
boolean jpeg_start_decompress(j_decompress_ptr cinfo);
```

### **Description**

The function `jpeg_start_decompress()` shall initialize state for a JPEG decompression cycle and allocate working memory. The JPEG datastream header must be read prior to the invocation of `jpeg_start_decompress()` to obtain the parameters for decompression.

## **jpeg\_start\_output**

### **Name**

`jpeg_start_output` — initialize for a pass in buffered-image mode

### **Synopsis**

```
#include <jpeglib.h>
boolean jpeg_start_output(j_decompress_ptr cinfo, int scan_number);
```

### **Description**

`jpeg_start_output()` shall initialize state for an output pass in buffered-image mode. The `scan_number` indicates the scan of the image to be displayed. Scan numbers start from 1. The buffered-image mode must be selected before starting an output pass by setting `cinfo.buffered_image = TRUE`.

### **Return Value**

`jpeg_start_output()` shall return FALSE if decompression is suspended. Otherwise, `jpeg_start_output()` shall return TRUE.

## **jpeg\_std\_error**

### **Name**

`jpeg_std_error` — update error manager with error handling routines

### **Synopsis**

```
#include <jpeglib.h>
struct jpeg_error_mgr * jpeg_std_error(struct jpeg_error_mgr * error_mgr);
```

### **Description**

`jpeg_std_error()` shall update the given `jpeg_error_mgr` object with standard error handling methods.

### **Return Value**

`jpeg_std_error()` shall return the updated `jpeg_error_mgr` object.

## **jpeg\_stdio\_dest**

### **Name**

`jpeg_stdio_dest` — Initialize state for output to stdio stream

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_stdio_dest(j_compress_ptr cinfo, FILE * outfile);
```

### **Description**

`jpeg_stdio_dest()` shall initialize state for output to the given stdio stream `outfile`. The stream `outfile` must be in open state.

## **jpeg\_stdio\_src**

### **Name**

`jpeg_stdio_src` — Initialize state for input from stdio stream

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_stdio_src(j_decompress_ptr cinfo, FILE * infile);
```

### **Description**

`jpeg_stdio_src()` shall initialize state for input from the given stdio stream `infile`. The stream `infile` must be in open state.

## **jpeg\_suppress\_tables**

### **Name**

`jpeg_suppress_tables` — control quantization and Huffman table suppression

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_suppress_tables(j_compress_ptr cinfo, boolean suppress);
```

### **Description**

The function `jpeg_suppress_tables()` forcibly suppress or un-suppresses all quantization and Huffman tables. If "suppress" is TRUE, the function shall mark all currently defined tables as already written. Otherwise, the tables will be marked as not written. This controls the emission of tables on subsequent calls to `jpeg_start_compress()`.

## **jpeg\_write\_coefficients**

### **Name**

`jpeg_write_coefficients` — Compression initialization for writing raw-coefficient data

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_write_coefficients(j_compress_ptr cinfo, jvirt_barray_ptr
* coeff_arrays);
```

### **Description**

`jpeg_write_coefficients()` shall write the contents of the JPEG file as DCT coefficients. The DCT coefficients shall be obtained from the array of virtual block array descriptors pointed to be "coeff\_arrays". The number of arrays to be written is obtained from `cinfo.num_components`. Note: The virtual arrays may not be realized before `jpeg_write_coefficients()` is called. The virtual arrays requested from the compression object's memory manager may be realized by calling `jpeg_write_coefficients()` as a side-effect.

## **jpeg\_write\_m\_byte**

### **Name**

`jpeg_write_m_byte` — emit a byte of special marker data

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_write_m_byte(j_compress_ptr cinfo, int val);
```

### **Description**

`jpeg_write_m_byte()` shall emit a byte of marker data equal to "val".

## **jpeg\_write\_m\_header**

### **Name**

`jpeg_write_m_header` — emit header for special marker

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_write_m_header(j_compress_ptr cinfo, int marker, unsigned
int datalen);
```

### **Description**

`jpeg_write_marker_header()` shall emit the marker header. The marker header consists of the marker code derived from "marker" followed by the length of marker data "datalen".

## **jpeg\_write\_marker**

### **Name**

`jpeg_write_marker` — write special marker data

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_write_marker(j_compress_ptr cinfo, int marker, const
JOCTET * dataptr, unsigned int datalen);
```

### **Description**

`jpeg_write_marker()` shall emit the marker header and "datalen" number of marker bytes obtained from "\*dataptr". The marker header consists of the marker code followed by the length of marker data.

## **jpeg\_write\_raw\_data**

### **Name**

`jpeg_write_raw_data` — write raw downsampled image data

### **Synopsis**

```
#include <jpeglib.h>
JDIMENSION jpeg_write_raw_data(j_compress_ptr cinfo, JSAMPIMAGE
data, JDIMENSION num_lines);
```

### **Description**

`jpeg_write_raw_data()` shall write the compressed image data for raw downsampled data supplied in the `JSAMPIMAGE` array argument. The number of scanlines passed in `num_lines` to `jpeg_write_raw_data()` is measured in terms of the component with the largest `v_samp_factor`.

If the image dimensions are not a multiple of the MCU size, the data must be padded to a multiple of a DCT block in each component, such that each downsampled row must contain a multiple of 8 valid samples, and there must be a multiple of 8 sample rows for each component. Data must be padded so that the passed `num_lines` value is atleast (`cinfo->max_v_samp_factor * DCTSIZE`). `jpeg_write_raw_data()` shall process one MCU row per call which is (`cinfo->comp_info[0].v_samp_factor*DCTSIZE`) sample rows of each component.

Before starting the compression sequence, `cinfo->raw_data_in` must be set to TRUE. `cinfo->jpeg_color_space` must be set to colorspace to be used in the JPEG file. The sampling factors, `cinfo->comp_info[i].h_samp_factor` and `cinfo->comp_info[i].v_samp_factor` must be set to the dimensions of the supplied data.

### **Return Value**

`jpeg_write_raw_data()` shall return the number of scanlines processed. `jpeg_write_raw_data()` shall return 0 if the compressor is suspended.

### **Errors**

`jpeg_write_raw_data()` shall report error and exit if `num_lines` is less than (`cinfo->max_v_samp_factor*DCTSIZE`).

## **jpeg\_write\_scanlines**

### **Name**

`jpeg_write_scanlines` — write scanlines of data to JPEG compressor

### **Synopsis**

```
#include <jpeglib.h>
JDIMENSION jpeg_write_scanlines(j_compress_ptr cinfo, JSAMPARRAY
scanlines, JDIMENSION num_lines);
```

### **Description**

`jpeg_write_scanlines()` shall write the number of scanlines of image data to be compressed from in-memory buffers. The image data shall be written in top-to-bottom scanline order.

### **Return Value**

On success, `jpeg_read_scanlines()` shall return the number of lines actually written.

### **Errors**

`jpeg_write_scanlines()` shall report a non-fatal error if the requested number of scanlines is greater than the height of the original unscaled image.

## **jpeg\_write\_tables**

### **Name**

`jpeg_write_tables` — create a tables-only file

### **Synopsis**

```
#include <jpeglib.h>
void jpeg_write_tables(j_compress_ptr cinfo);
```

### **Description**

`jpeg_write_tables()` shall create a tables-only file by writing an abbreviated datastream containing only SOI, DQT and/or DHT and EOI markers. All the quantization and Huffman tables currently defined in the compression object shall be emitted unless their `sent_table` flag is set to TRUE. Once emitted, `sent_table` flag shall be set for all tables written.

## 10.2 Data Definitions for libfontconfig

This section defines global identifiers and their values that are associated with interfaces contained in libfontconfig. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not

to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

# 11 Commands and Utilities

## 11.1 Commands and Utilities

An LSB conforming implementation shall provide the commands and utilities as described in [Table 11-1](#), with at least the behavior described as mandatory in the referenced underlying specification, with the following exceptions:

1. If any operand (except one which follows --) starts with a hyphen, the behavior is unspecified.

**Rationale (Informative):** Applications should place options before operands, or use --, as needed. This text is needed because, by default, GNU option parsing differs from POSIX, unless the environment variable POSIXLY\_CORRECT is set. For example, ls . -a in GNU ls means to list the current directory, showing all files (that is, "." is an operand and -a is an option). In POSIX, "." and -a are both operands, and the command means to list the current directory, and also the file named -a. Suggesting that applications rely on the setting of the POSIXLY\_CORRECT environment variable, or try to set it, seems worse than just asking the applications to invoke commands in ways which work with either the POSIX or GNU behaviors.

## 11.2 Command Behavior

This section contains descriptions for commands and utilities whose specified behavior in the LSB contradicts or extends the standards referenced. It also contains commands and utilities only required by the LSB and not specified by other standards.

## **fc-cache**

### **Name**

`fc-cache` — build font information cache files

### **Description**

`fc-cache` scans the font directories on the system and builds font information cache files for applications using fontconfig for their font handling. If directory arguments are not given, `fc-cache` uses each directory in the current font configuration. Each directory is scanned for font files readable by FreeType. A cache is created which contains properties of each font and the associated filename. This cache is used to speed up application startup when using the fontconfig library.

### **Synopsis**

```
fc-cache [ -fsV? ] [ --force ] [ --system-only ] [ --verbose ] [ --version ] [ --help ]
[ dirs ]
```

### **Option and Operand Handling**

This program follows the usual GNU command line syntax, with long options starting with two dashes ('-'). A summary of options is included below.

`-f --force`

Force re-generation of apparently up-to-date cache files, overriding the timestamp checking.

`-s --system-only`

Only scan system-wide directories, omitting the places located in the user's home directory.

`-v --verbose`

Display status information while busy.

`-? --help`

Show summary of options.

`-V --version`

Show version of the program and exit.

`dirs`

A list of directories to scan for fonts.

## **fc-list**

### **Name**

`fc-list` — list available fonts.

### **Description**

`fc-list` lists fonts and styles available on the system for applications using font-config.

### **Synopsis**

`fc-list [-vV?] [ --verbose ] [ --version ] [ --help ] [ pattern ] [ element ]`

### **Option and Operand Handling**

This program follows the usual GNU command line syntax, with long options starting with two dashes ('-'). A summary of options is included below.

`-v --verbose`

Display status information while busy.

`-? --help`

Show summary of options.

`-V --version`

Show version of the program and exit.

`pattern`

If this argument is set, only fonts matching pattern are displayed.

`element`

If set, the element property is displayed for matching fonts.

## **fc-match**

### **Name**

`fc-match` — match available fonts

### **Description**

`fc-match` matches font-pattern (empty pattern by default) using the normal font-config matching rules to find the best font available. If `--sort` is given, the sorted list of best matching fonts is displayed. With `--verbose`, the whole font pattern for each match is printed, otherwise only the file, family and style are printed.

## 12.2 Data Definitions for libfreetype

This section defines global identifiers and their values that are associated with interfaces contained in libfreetype. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 12.3 Interface Definitions for libfreetype

The interfaces defined on the following pages are included in libfreetype and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 12.1](#) shall behave as described in the referenced base document.

## FT\_Get\_X11\_Font\_Format

### Name

FT\_Get\_X11\_Font\_Format — Get font format

### Synopsis

```
#include <freetype/ftxf86.h>
const char *FT_Get_X11_Font_Format(FT_Face face);
```

### Description

The `FT_Get_X11_Font_Format()` function can be used to return a string describing the format of the font face referenced by `face`.

Note that this information is not needed normally; however, there are special cases (like in PDF devices) where it is important to differentiate, in spite of FreeType's uniform API.

### Return Value

The `FT_Get_X11_Font_Format()` function returns a string describing the format of a given face, using values which can be used as an X11 `FONT_PROPERTY`. Possible values are TrueType, Type 1, BDF, PCF, Type 42, CID Type 1, CFF, PFR, and Windows FNT. In case of an error, `NULL` is returned.

## 13.2 Data Definitions for libXft

This section defines global identifiers and their values that are associated with interfaces contained in libXft. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

### 13.3 Interface Definitions for libXft

The interfaces defined on the following pages are included in libXft and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 13.1](#) shall behave as described in the referenced base document.

## **IX Xrender library**

## 14 Libraries

### 14.1 Interfaces for libXrender

[Table 14-1](#) defines the library name and shared object name for the libXrender library

**Table 14-1 libXrender Definition**

Library:	libXrender
SONAME:	libXrender.so.1

The behavior of the interfaces in this library is specified by the following specifications:

#### 14.1.1 Default LibGroup for libXrender

##### 14.1.1.1 Interfaces for Default LibGroup for libXrender

An LSB conforming implementation shall provide the generic functions for Default LibGroup for libXrender specified in [Table 14-2](#), with the full mandatory functionality as described in the referenced underlying specification.

## 14.2 Data Definitions for libXrender

This section defines global identifiers and their values that are associated with interfaces contained in libXrender. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

### 14.3 Interface Definitions for libXrender

The interfaces defined on the following pages are included in libXrender and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 14.1](#) shall behave as described in the referenced base document.

## X GTK+ Stack Libraries

## 15 Libraries

### 15.1 Introduction

A conforming implementation shall support the following GTK+ stack libraries which provide interfaces for creating rich graphical user interface applications.

#### GLib

A general-purpose utility library, not specific to graphical user interfaces. GLib provides many useful data types, macros, type conversions, string utilities, file utilities, a main loop abstraction, and so on.

`libglib-2.0`

`libgmodule-2.0`

`libgobject-2.0`

`libgthread-2.0`

#### ATK

ATK is the Accessibility Toolkit. It provides a set of generic interfaces allowing accessibility technologies to interact with a graphical user interface. For example, a screen reader uses ATK to discover the text in an interface and read it to blind users. GTK+ widgets have built-in support for accessibility using the ATK framework.

`libatk-1.0`

#### Pango

Pango is a library for internationalized text handling. It centers around the PangoLayout object, representing a paragraph of text. Pango provides the engine for GtkTextView, GtkLabel, GtkEntry, and other widgets that display text.

`libpango-1.0`

`libpangoxft-1.0`

`libpangotf2-1.0`

#### GdkPixbuf

This is a small library which allows you to create GdkPixbuf ("pixel buffer") objects from image data or image files. Use a GdkPixbuf in combination with GtkImage to display images.

`libgdk_pixbuf-2.0`

`libgdk_pixbuf_xlib-2.0`

#### GDK

GDK is the abstraction layer that allows GTK+ to support multiple windowing systems. GDK provides drawing and window system facilities on X11, Windows, and the Linux framebuffer device.

`libgdk-x11-2.0`

#### GTK+

The GTK+ library contains widgets, that is, GUI components such as Gtk-

Button or GtkTextView.

libgtk-x11-2.0

There are three main parts to the definition of each of these libraries.

The "Interfaces" section defines the required library name and version, and the required public symbols (interfaces and global data), as well as symbol versions, if any.

The "Interface Definitions" section provides complete or partial definitions of certain interfaces where either this specification is the source specification, or where there are variations from the source specification. If an interface definition requires one or more header files, one of those headers shall include the function prototype for the interface.

For source definitions of interfaces which include a reference to a header file, the contents of such header files form a part of the specification. The "Data Definitions" section provides the binary-level details for the header files from the source specifications, such as values for macros and enumerated types, as well as structure layouts, sizes and padding, etc. These data definitions, although presented in the form of header files for convenience, should not be taken as representing complete header files, as they are a supplement to the source specifications. Application developers should follow the guidelines of the source specifications when determining which header files need to be included to completely resolve all references.

**Note:** While the Data Definitions supplement the source specifications, this specification itself does not require conforming implementations to supply any header files.

## 15.2 Interfaces for libglib-2.0

## 15.3 Data Definitions for libglib-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libglib-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.5 Data Definitions for libgobject-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgobject-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their

content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.7 Data Definitions for libgmodule-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgmodule-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.10 Data Definitions for libatk-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libatk-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C lan-

guage is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.11.1 GTK Internationalized Text Layout and Rendering library

### 15.11.1.1 Interfaces for GTK Internationalized Text Layout and Rendering library

An LSB conforming implementation shall provide the generic functions for GTK Internationalized Text Layout and Rendering library specified in [Table 15-64](#), with the full mandatory functionality as described in the referenced underlying specification.

## 15.12 Data Definitions for libpango-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libpango-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.14 Data Definitions for libpangoxft-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libpangoxft-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.18 Data Definitions for libgdk\_pixbuf-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk\_pixbuf-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.20 Data Definitions for libgdk\_pixbuf\_xlib-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk\_pixbuf\_xlib-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

An LSB conforming implementation shall provide the generic data interfaces for GTK Drawing toolkit specified in [Table 15-76](#), with the full mandatory functionality as described in the referenced underlying specification.

## 15.22 Data Definitions for libgdk-x11-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk-x11-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.23 Interfaces for libgtk-x11-2.0

[Table 15-77](#) defines the library name and shared object name for the libgtk-x11-2.0 library

**Table 15-77 libgtk-x11-2.0 Definition**

Library:	libgtk-x11-2.0
SONAME:	libgtk-x11-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Gtk] [Gtk 2.6.2 Reference Manual](#)

[LSB] [This Specification](#)

## 15.23.1 GTK main Widgets library

### 15.23.1.1 Interfaces for GTK main Widgets library

An LSB conforming implementation shall provide the generic functions for GTK main Widgets library specified in [Table 15-78](#), with the full mandatory functionality as described in the referenced underlying specification.

An LSB conforming implementation shall provide the generic deprecated functions for GTK main Widgets library specified in [Table 15-79](#), with the full mandatory functionality as described in the referenced underlying specification.

**Note:** These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

## 15.24 Data Definitions for libgtk-x11-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgtk-x11-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 15.25 Interface Definitions for libgtk-x11-2.0

The interfaces defined on the following pages are included in libgtk-x11-2.0 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 15.23](#) shall behave as described in the referenced base document.

### **gtk\_button\_get\_image**

#### **Name**

`gtk_button_get_image` — get button image widget

#### **Synopsis**

```
#include <gtk/gtk.h>
GtkWidget *gtk_button_get_image(GtkButton *button);
```

#### **Description**

The `gtk_button_get_image()` gets the widget that is currently set as the image of `button`. This may have been explicitly set by `gtk_button_set_image()` or constructed by `gtk_button_new_from_stock()`.

#### **Return Value**

The `gtk_button_get_image()` function returns a `GtkWidget` pointer referring to the image. If there is no associated image, `NULL` is returned.

#### **Errors**

No errors are defined.

## **gtk\_button\_set\_image**

### **Name**

`gtk_button_set_image` — set button image widget

### **Synopsis**

```
#include <gtk/gtk.h>
void gtk_button_set_image(GtkButton *button, GtkWidget *widget);
```

### **Description**

The `gtk_button_set_image()` function sets the image of `button` to the widget given by `widget`. Whether the image is displayed or not depends on the setting of the `gtk-button-images` property. It is not necessary to call `gtk_widget_show()` on the image.

### **Errors**

No errors are defined.

# 16 Libraries

## 16.1 Introduction

An conforming implementation shall support the following Qt libraries which provide interfaces for creating rich user applications, either graphical or console.

### QtCore

A general-purpose application development library, not specific to graphical user interfaces. QtCore provides a main loop, threading classes, tool classes, template container classes, IO classes, and so on.

### QtGui

The GUI part of Qt, provides a paint engine, text rendering engine, widgets, printing, PDF generation, accessibility classes, and so on.

### QtXml

The XML support for Qt, provides fast XML parsing and DOM classes to traverse the XML tree.

### QtOpenGL

The OpenGL integration for Qt, provides OpenGL rendering and embedding.

### QtSql

The database part of Qt, provides access to databases and models that connect databases into the model/view framework of QtGui.

### QtSvg

Renders Svg files into any context, for displaying on the screen, printing or embedding in PDF.

### QtNetwork

Provides network server and client classes, TCP/IP, UDP, Http, Ftp, Url parsing support, and so on.

There are three main parts to the definition of each of these libraries.

The "Interfaces" section defines the required library name and version, and the required public symbols (interfaces and global data), as well as symbol versions, if any.

The "Interface Definitions" section provides complete or partial definitions of certain interfaces where either this specification is the source specification, or where there are variations from the source specification. If an interface definition requires one or more header files, one of those headers shall include the function prototype for the interface.

For source definitions of interfaces which include a reference to a header file, the contents of such header files form a part of the specification. The "Data Definitions" section provides the binary-level details for the header files from the source specifications, such as values for macros and enumerated types, as well as structure layouts, sizes and padding, etc. These data definitions, although

presented in the form of header files for convenience, should not be taken as representing complete header files, as they are a supplement to the source specifications. Application developers should follow the guidelines of the source specifications when determining which header files need to be included to completely resolve all references.

**Note:** While the Data Definitions supplement the source specifications, this specification itself does not require conforming implementations to supply any header files.

## 16.2 Interfaces for libQtCore

[Table 16-1](#) defines the library name and shared object name for the libQtCore library

**Table 16-1 libQtCore Definition**

Library:	libQtCore
SONAME:	libQtCore.so.4

The behavior of the interfaces in this library is specified by the following specifications:

## 16.3 Data Definitions for libQtCore

This section defines global identifiers and their values that are associated with interfaces contained in libQtCore. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

## 16.4 Interfaces for libQtGui

[Table 16-80](#) defines the library name and shared object name for the libQtGui library

**Table 16-80 libQtGui Definition**

Library:	libQtGui
SONAME:	libQtGui.so.4

The behavior of the interfaces in this library is specified by the following specifications:

- [CXXABI] [Itanium™ C++ ABI](#)
- [QtGui] [QtGui 4.2.0](#)
- [QtXml] [QtXml 4.2.0](#)
